YASKAWA

AC Servo Drive

Σ-X Series

Motion × Digital data to accelerate evolution

Digital data solutions by the Σ-X series will transport you to the next step in production with the high precision collection and analysis of data.

Σ-X-Series AC Servo Drive

solution

A digital data solution that begins with the servo, made possible by Yaskawa

Customer Value

Enables immediate data collection, without device or equipment design changes
Predict trends from data such as vibration, disturbance, and torque reference to prevent sudden stops or failure

Best motion performance in the industry for maximizing equipment performance and contributing to resolving our customers' issues

Customer Value

Upgrade to the Σ-X series for improved equipment performance and production efficiency
Faster development with smart servos

A digital data solution that begins with the servo, made possible by Yaskawa

Inevitably, future manufacturing will involve a transformation into factories without downtime, capable of efficient, consistent, and high-quality production while responding to on-site changes. Toward this vision, Yaskawa Electric has introduced the i³-Mechatronics concept, and as the first step, we have developed Σ -X AC servo drives that collect data to help users visualize and analyze production. Σ -X products can collect valuable data on the same time axis, as needed for insight on how the state of each device may be linked to changes in equipment motion that represent problems.

i³-Mechatronics concept

Building on proven factory automation solutions centered on mechatronics **technologies and products** by tapping the potential of **digital data management,** Yaskawa helps solve enterprise challenges from production sites.

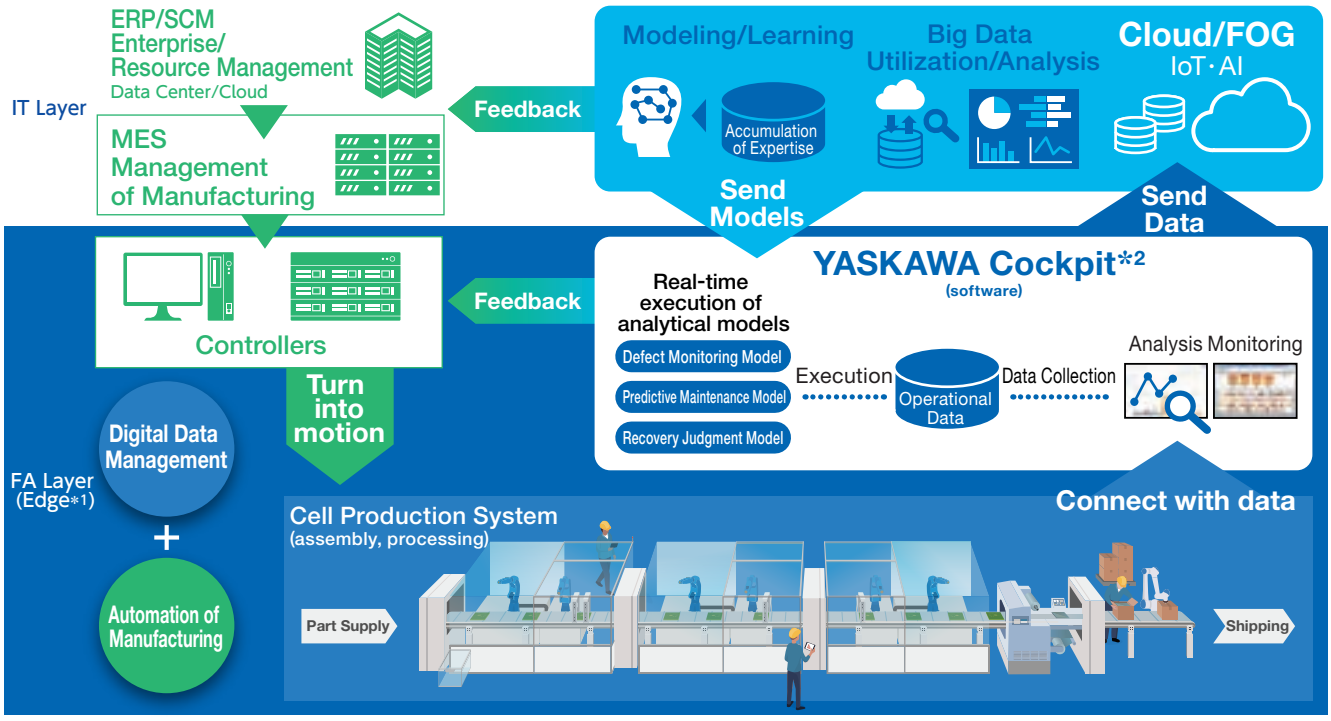
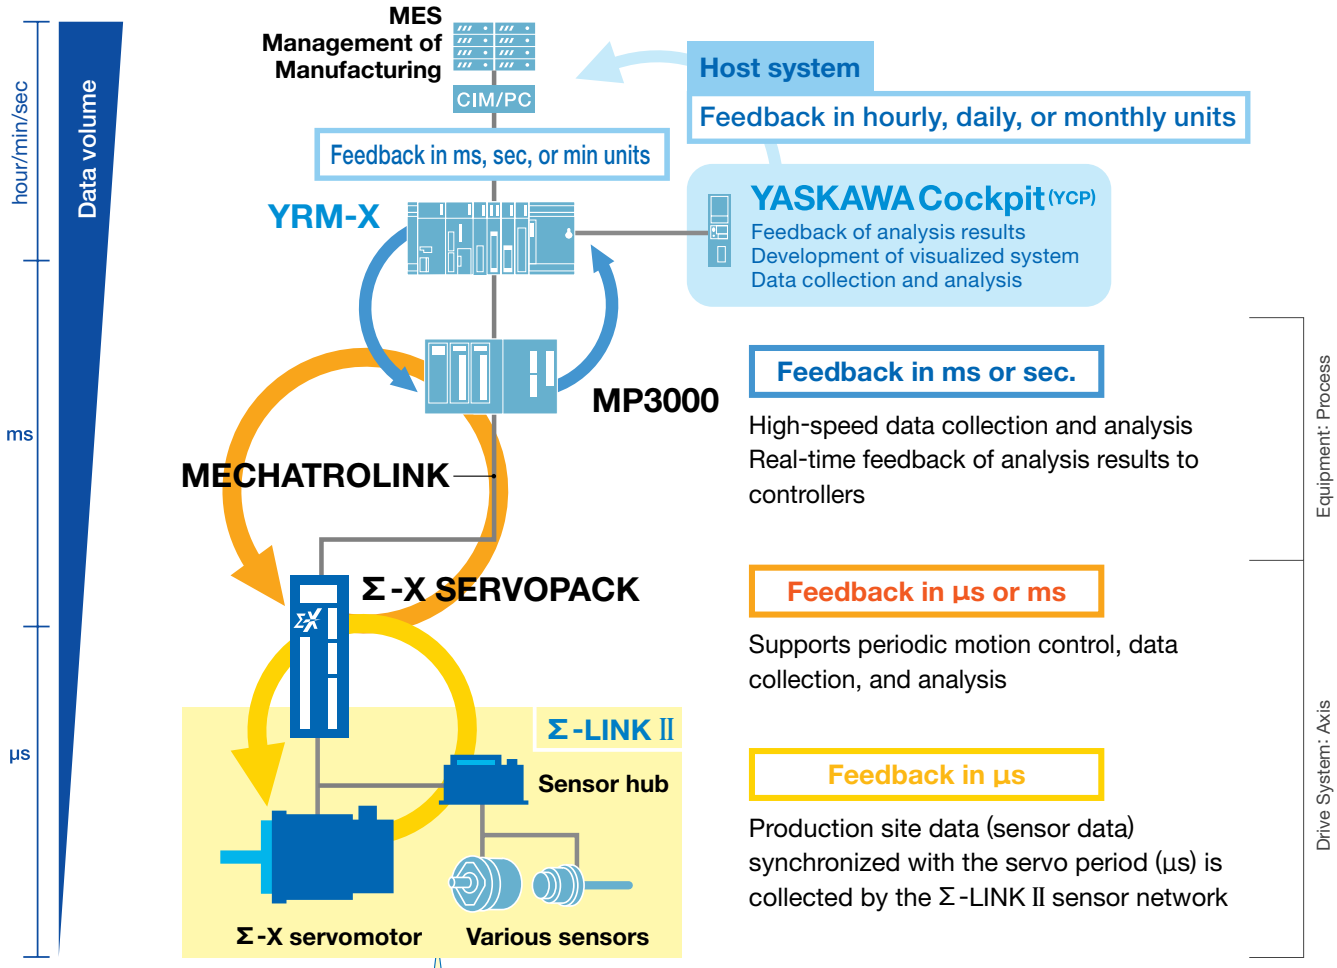
Create new values

Smart factory with i³-Mechatronics solutions



*1: Where information is processed, such as data analysis and feedback that must be performed in real time (areas close to production sites, such as inside factories and production bases)
*2: Software to collect, store, and analyze real-time data from equipment at production sites

Components that bring i³-Mechatronics to life

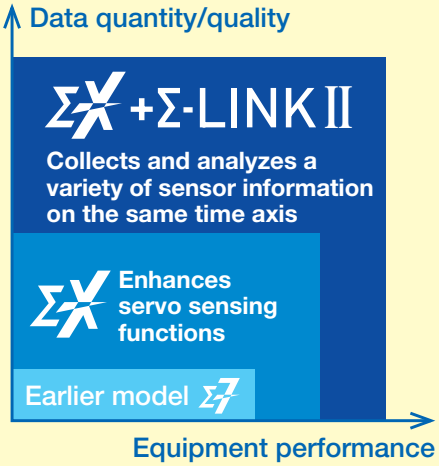


Σ-X: Becoming a key factor in collection of real-time data

Σ-X features enhanced servo sensing functions. What's more, Σ-LINK II sensor networks can be used to collect sensor information at the same time, for equipment offering higher performance and functionality than ever.

What is Σ-LINK II?

A network providing integrated collection of servo and sensor information. Maintains advanced, highly reliable communication between SERVOPACKs and servomotor encoders while enabling cascaded connections of sensors and I/O devices.



Integrated “Data Collection and Visualization”

The servomotor acts as a sensor and collects various data. It can be used for preventive maintenance of equipment.

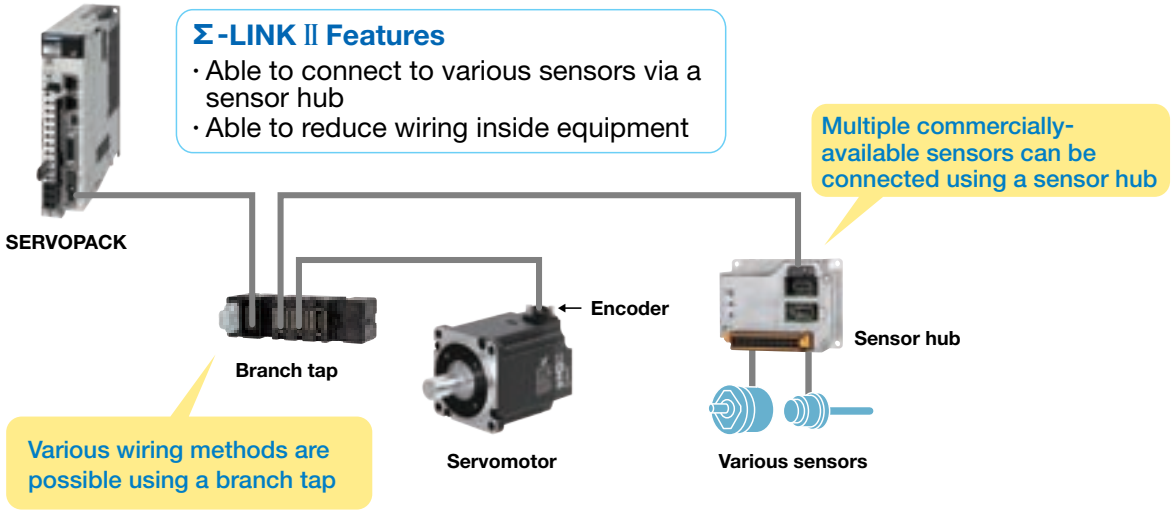
Σ-X uses the servomotor as a sensor to sense and monitor the parts used by the servo and the servo’s installation environment. This can be useful for accurately determining maintenance periods and for preventing sudden failures.

■ Sensing Items

Encoder Power-on Time (New) Encoder Supply Voltage Encoder Battery Voltage Motor Rotation Count Maintenance Prediction Monitor: Bearing Maintenance Prediction Monitor: Oil Seal Acceleration Sensor Monitor	Σ-X
Estimated External Disturbance Torque Number of Serial Encoder Communications Errors Settling Time Amount of Overshoot Residual Vibration Frequency Estimated Vibration Maximum Value of Accumulated Load Ratio Number of MECHATROLINK Communications Errors Margin until Overload Temperature Margin until Servomotor Overheats	Σ-7

- Both installation environment information and the service life of parts used by the servo can be monitored.

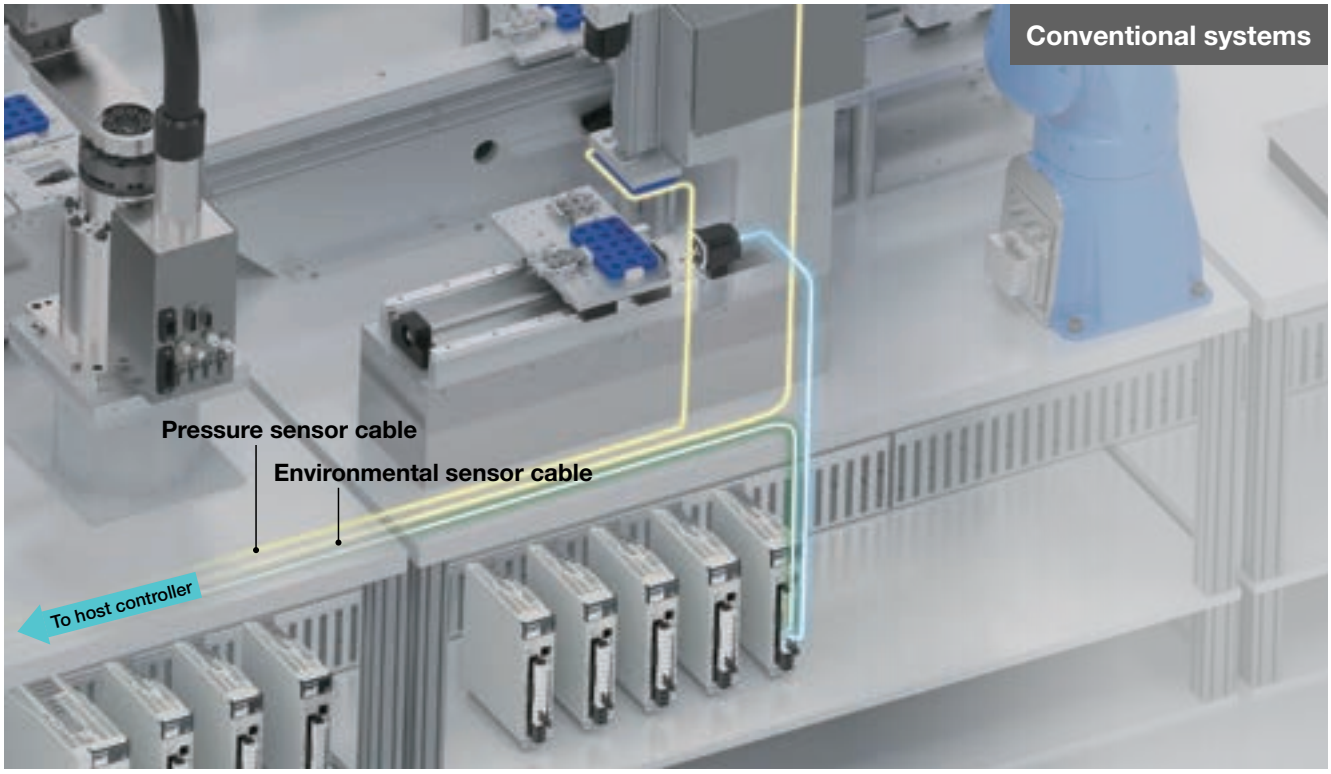
Motion and sensor data on the same time axis is collected using Σ-LINK Ⅱ. Along with reducing the man-hours required for data processing, Σ-X also enables errors to be detected by identifying changes in the equipment.

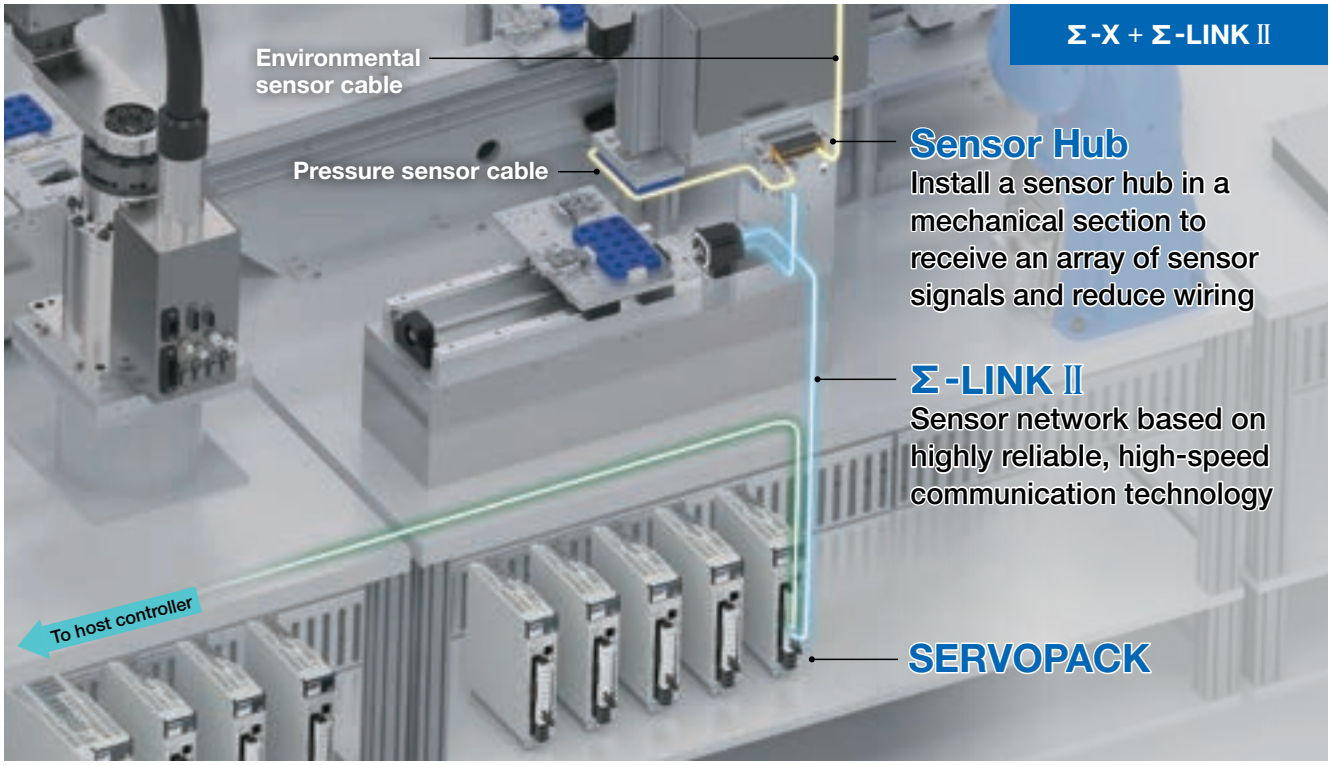


Σ-X + Σ-LINK Ⅱ System example

Optimal device layout in equipment, less wiring

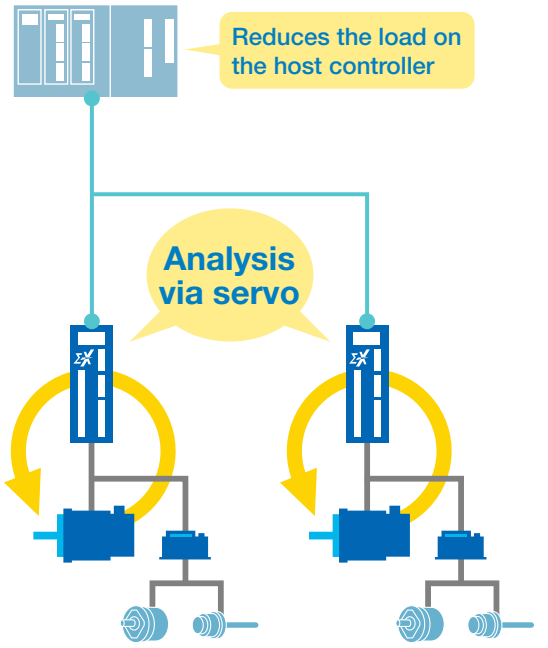
- Can receive an array of sensor signals via a sensor hub.
- Less affected by noise, because wiring from sensors to the controller can be shortened.
- Installing a sensor hub in mechanical sections reduces wiring.





Intelligent "Utilization of Sensing Data"

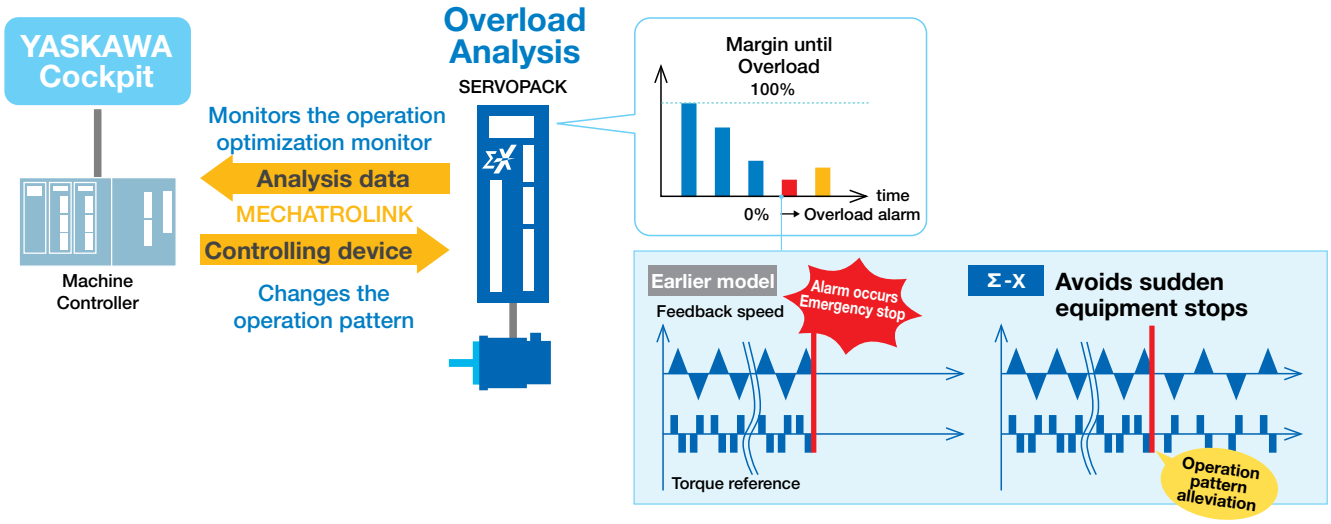
Data utilization can be completed by the servo alone, from digitizing operation data to detecting errors. It is able to provide feedback to the host system in real time.



Items to monitor	Solutions with Σ-X	
Equipment status	Sensing function	
Changes in mechanical vibrations	Error detection	New Function
Load status Torque reference Changes in external disturbance	Vibration information monitor	New Function
	External disturbance torque estimation	
	Moment of inertia ratio estimation	
Servo status	Operation optimization monitor	
Operation margin	Margin until overload	
	Margin until regenerative overload	New Function
	Temperature margin until SERVOPACK overheats	New Function
	Temperature margin until servomotor overheats	
	Main circuit power supply voltage margin	New Function
Servo operating status	Environment/Service life monitor	
Surrounding environment	Operating status monitor	Improved Function
Operating status	Service life estimation	Improved Function

Utilizes the operation optimization monitor to ensure that equipment does not stop working.

Sudden equipment stops can be prevented by monitoring the operation optimization monitor and changing the operation pattern with the controller according to the equipment status.



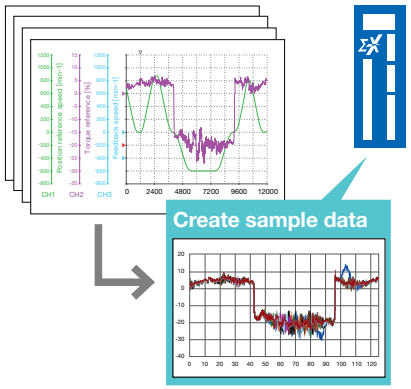
The Σ-X raises the intelligence of the SERVOPACK. Its error detection function detects when equipment is operating in a way that may be “different than normal”.

The Σ-X detects equipment errors by comparing sample data stored in the SERVOPACK with operation data. It is useful for detecting equipment errors caused by deterioration over time, judging the quality of products and confirming assembly accuracy.

Advance Preparation

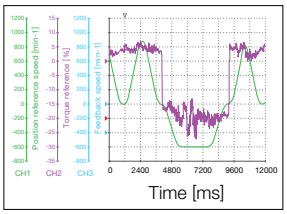
Acquire multiple sets of trace data with a fixed pattern of operation

Save the sample data in the SERVOPACK

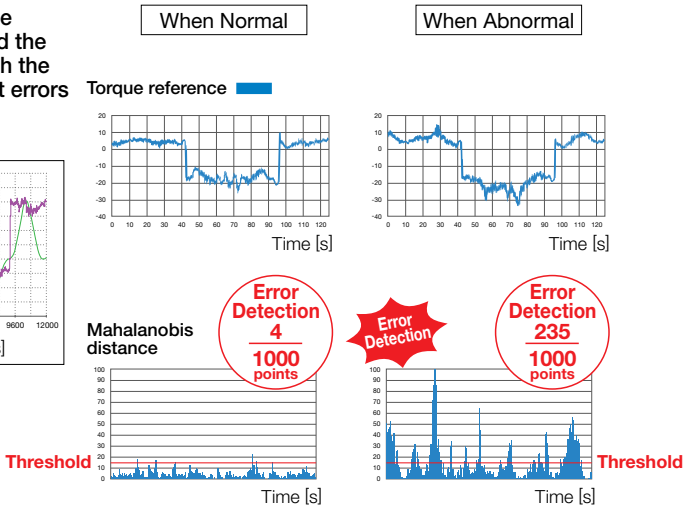


Operation

Operate with the same operation pattern, and the servo compares it with the sample data to detect errors



Error Detection



Error Detection Settings and Monitoring Methods for Judgment Results

Settings and monitoring can be done with the engineering tool SigmaWin+.

Step 1 Creating Sample Data

Read multiple sets of trace data (std files), create sample data and register it in the SERVOPACK.

Step 3 Executing the Error Detection Function

The function is enabled by pressing the [Execute Error Detection] button. The equipment starts running, and A.905 (Error Detection Warning) occurs when an error is detected according to the set conditions and description.

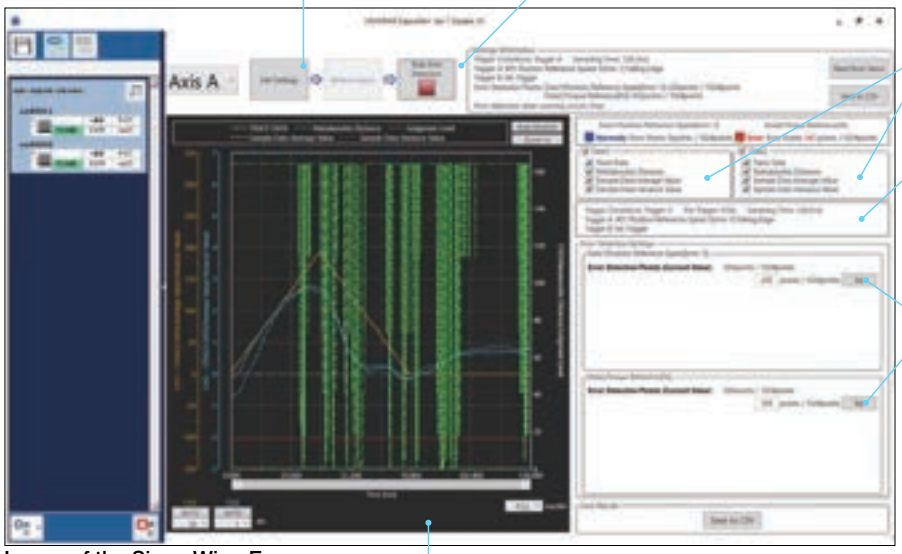


Image of the SigmaWin+ Error Detection Function Screen

Errors can be detected with two sets of trace targets.

Trigger conditions and the conditions for the sampling period are the set values for the sample data.

Step2 Setting the Error Detection Warning Level

Set the level at which an Error Detection Warning (A.905) will be issued based on the degree of difference from the sample data when a difference is detected (error detection points).

Step 4 Displaying the Error Detection Results

The error detection results can be monitored.

Best motion performance in the industry

for maximizing equipment performance and contributing to resolving our customers' issues

1 Improved equipment performance

Shortens takt time

Upgrade to Σ-X for improved production efficiency and further added value from equipment. Also enables faster development and lower production costs.

UP!

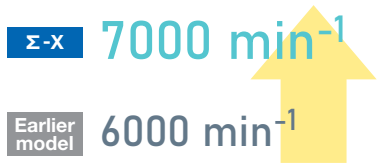
- ☑ Throughput
- ☑ Equipment speed performance during development and design

Improved basic performance, essential in accelerated operation

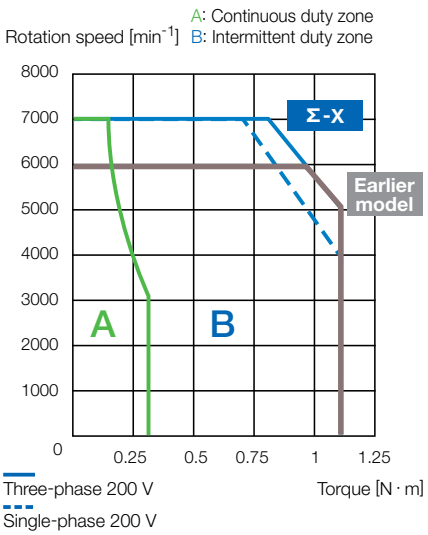
Maximum motor rotation speed

The maximum rotation speed of the motor has increased from the earlier value of 6,000 min^{-1} to 7,000 min^{-1}.

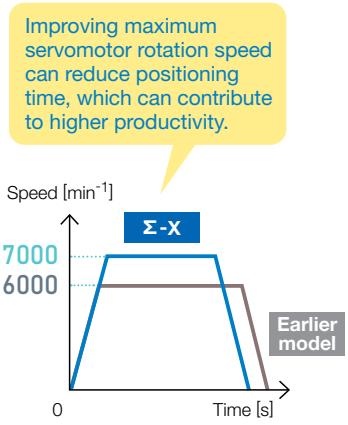
Applicable models:
All SGMXJ and SGMXA models



Torque-rotation speed characteristics (for SGMXJ-01A)



Positioning time



Speed frequency response

Speed frequency response has changed from 3.1 kHz for the earlier model to 3.5 kHz. Maximizing the following performance for the speed reference improves equipment productivity.

Improves control precision and smoothness

Upgrading to Σ-X reduces inconsistent speed and improves control accuracy. Refinements in smooth movement can enhance machining precision and quality.

UP!

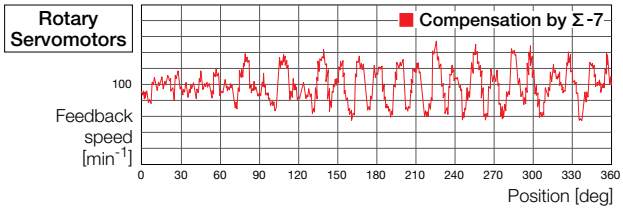
- ☑ Manufacturing quality
- ☑ Equipment precision
- ☑ Machining precision in operation

Expanded functions for improved machining precision and quality

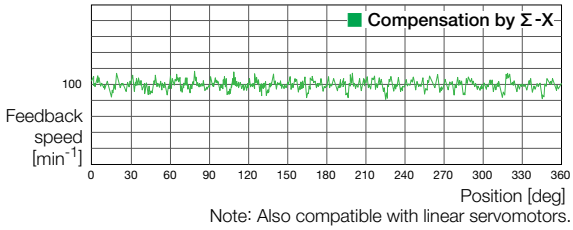
Speed ripple compensation

Smoother drive is possible from a more effective speed ripple compensation algorithm for cogging compensation. This helps reduce inconsistency in equipment machining precision and quality.

Earlier model Uneven speed causes some inconsistency in machining precision and quality



Σ-X **Eliminates uneven speed, for smooth movement that improves the quality of final products**



Note: Also compatible with linear servomotors.

Output torque compensation

Previously, output torque may have become offset from reference values due to motor temperature or load status. Output torque compensation is used to compensate the offset from the torque reference for output torque. Reducing the offset can improve equipment machining quality.

Earlier model Output torque with the same torque reference varies significantly.

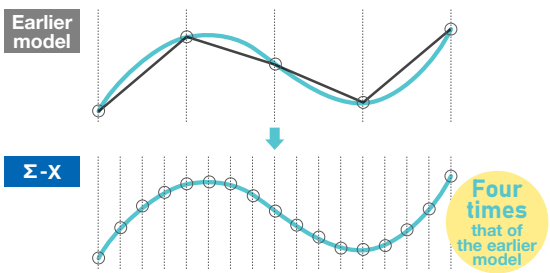
Factors
- Changes in motor temperature
  Changes in ambient temperature or motor load status
- Variation in individual motors
  Variation in torque constant

Σ-X **Output torque with the same torque reference is uniform, contributing to improved machining quality.**

Compensation
- Compensation according to motor temperature
- Compensation for variation in individual motors

Minimum transmission period of 31.25 µs (in development)

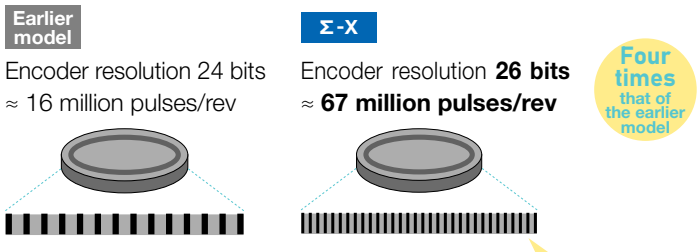
(MECHATROLINK-4 communications)
The minimum period for updating communication data has been changed from 125 µs to 31.25 µs, enabling faster and more fine-grained commands.



∗ MECHATROLINK-Ⅲ 125 µs min. communication data updating period
Note: Minimum transmission periods are determined in combination with controllers.

Equipped with a high-resolution 26-bit encoder

The resolution of the encoder has been increased to 26 bits, four times that of the earlier model.



- Increased positioning resolution/stop precision → **Precise stops**
- Decrease in speed ripples → **Smooth movement and improved machining precision**

2 Faster servo tuning

Zero man-hours for tuning even in equipment with severe load fluctuations

Σ-X is free of problems affecting other servos, such as time lost in ineffective tuning to position or transfer workpieces of different weights, or servo performance not improving takt time.

OK!

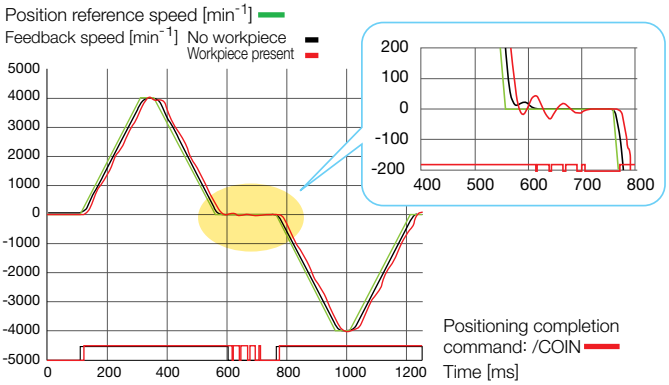
- ☑ Unprecedented compatibility
- ☑ Accelerated development

Toward effortless tuning, with expanded functions for load fluctuation

Load fluctuation compensation control

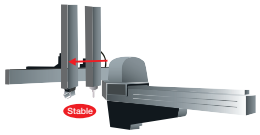
Yaskawa's original "Load fluctuation compensation control" function suppresses variations in settling time and achieves stable drive even if the load fluctuates according to the presence or absence of workpieces on the transfer shaft. Unlike with the earlier model, multiple tuning operations are not required.

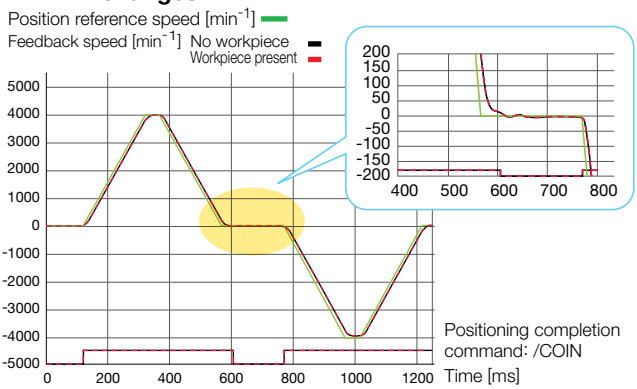
Earlier model After servo tuning, changes in load may cause overshoot or longer settling time.



Workpiece (moment of inertia ratio)	Settling time
None (324%): Black line	Approx. 40 ms
Present (947%): Red line	Approx. 125 ms

Σ-X **Settling time does not change even if the load changes.**





Workpiece (moment of inertia ratio)	Settling time
None (324%): Black line	Approx. 40 ms
Present (947%): Red line	Approx. 40 ms

Enhanced servo tuning functions

The range of the tuning-less function has been expanded to a maximum of 100 times the load. Also applies to mechanisms that have posed tuning challenges, greatly reducing tuning time.

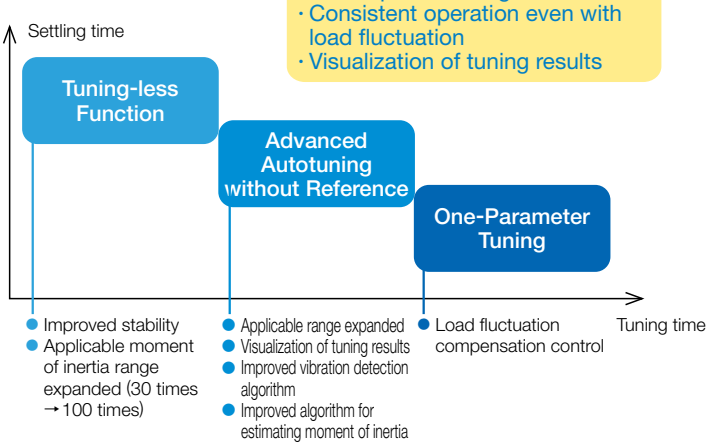
Note: The allowable moment of inertia ratio varies depending on the combination of SERVOPACK and servomotor.

Earlier model

- Autotuning is not available for some mechanisms
- Difficult to interpret tuning results
- Difficult to tune for axes with load fluctuation
- Autotuning results may not be suitable for some mechanisms

Σ-X

- Broad motion and rigidity support
- More optimal tuning
- Consistent operation even with load fluctuation
- Visualization of tuning results



Zero man-hours for setup even for equipment with limited ranges of motion

Σ-X eliminates the hassle of servo tuning and checking operation for mechanisms that do not support autotuning, which otherwise makes development more time-consuming.

OK!

- Tuning is possible by all equipment operators
- Reduces tuning time during development

Enhanced functionality to enable autotuning, toward effortless setup

Increased performance for estimating moment of inertia (arbitrary commands, real-time estimation)

The estimation algorithm has evolved. Estimates can be made with an arbitrary command, and the results can be monitored in real time. The moment of inertia can be estimated automatically for mechanisms that cannot perform round-trip operation and for those with load fluctuations. This eliminates the need for actions exclusive to estimation and reduces the time and effort for confirming and adjusting the range of motion.

Earlier model Estimating moment of inertia has required actions specifically for estimation.

Moment of inertia estimation function in SigmaWin+

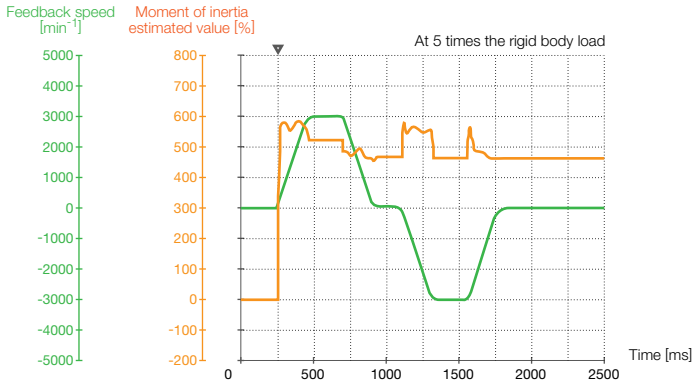
Σ-X

1 Moment of inertia ratio estimated with arbitrary commands

Estimated in conjunction with user commands or program jogging.

2 Constantly estimated in real time

Constant estimation is possible while the servo is ON, enabling monitoring of the results in real time.

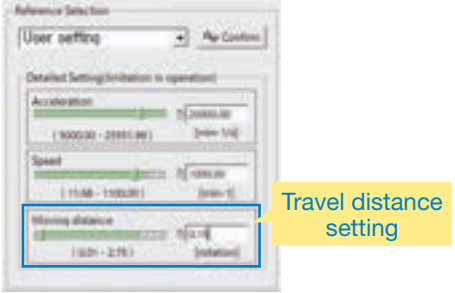


Note: Certain conditions apply to operation where estimation is available. In particular, estimation is not available during low-speed operation.

Moment of inertia estimation function for micro-movement

This estimation function is used for mechanisms with travel distances of less than 0.25 rotations. Previously, these mechanisms were calculated manually because the range of motion was too small for this estimation function to work.

Earlier model The existing function for estimating the moment of inertia could not be completed for some mechanisms because they cannot travel a certain distance.



Moment of inertia estimation conditions screen in SigmaWin+

Σ-X **Moment of inertia estimated even when range of motion is not fully acquired**

Capable of estimating the moment of inertia ratio even at rotations of less than 0.25

Note: Inaccuracies in estimations increase at a machine resonance of 70 to 300 Hz, which may cause errors to occur.

2 Faster servo tuning

Zero man-hours for re-tuning the servo during mass production

Σ-X eliminates stressful servo re-tuning for each servo-equipped unit at the stage of mass production.

OK!

- ☑ No need for re-tuning to address individual variation in equipment
- ☑ Prevents vibration due to differences in environments of use

Expanded anti-vibration option settings and tuning modes, accounting for equipment variation

Expansion of the applicable range for autotuning

It can be used to set the ideal options to match the equipment for mechanisms where autotuning cannot be applied, or when the investigation results do not match the machine.

Item	Description
Maximum Search Gain Setting	Enables optimal search gain configuration for the equipment.
Gain Ratio (margin)	Can be set with a margin accounting for equipment variation.
Allowable Amount of Overshoot	Configurable for equipment that allows overshoot.
Control Mode Expansion	Compatible with I-P control mode.

Advanced Setting Screen for Tuning in SigmaWin+

Earlier model Man-hours and rework from individual variation in equipment

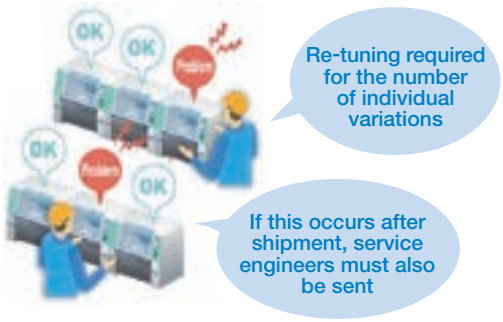
Servo tuning on the prototype machine

▼

Machines are mass-produced (individual variation occurs)

▼

Occurrence of individual variations in equipment



Σ-X **Enables tuning that is not easily affected by individual variation**

Servo tuning with a margin, as set on the prototype machine

▼

Machines are mass-produced (individual variation occurs)

▼

Prototype machine tuning results are applied to mass-produced machines

However...

No need for re-tuning or on-site service by engineers

3 Compatible functions

Convenient compatibility, easy upgrading

Eliminates hassles associated with replacement, such as the need to redesign equipment and reconfigure host controllers. This simplifies development and maintenance.

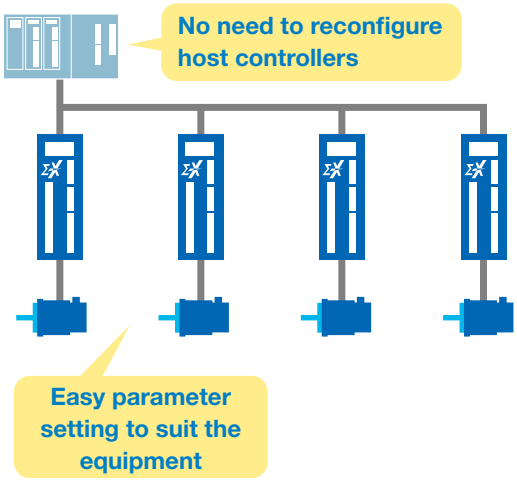
Reduced
- ☑ Development lead time
- ☑ Tuning time after replacement

No need to reconfigure host controllers

Σ-V/7 compatible functions

Compatible functions are available to facilitate replacement of the earlier model with Σ-X.
There is no need for complicated settings to reconfigure the host controller.

Σ-X Three easy steps to update settings for Σ-X



Step 1

Parameter conversion in SigmaWin+ enables migration of Σ-V/7 parameter settings as-is.

Step 2

Communications interface compatibility settings enable host controllers to communicate with Σ-X as if they were Σ-V/7.

Set Value	0	1	2
Function	Communicate as Σ-X	Communicate as Σ-V	Communicate as Σ-7

Step 3

Encoder resolution compatibility settings enable servomotors to operate with an encoder resolution different from the servomotor specifications.

Encoder resolution/operation

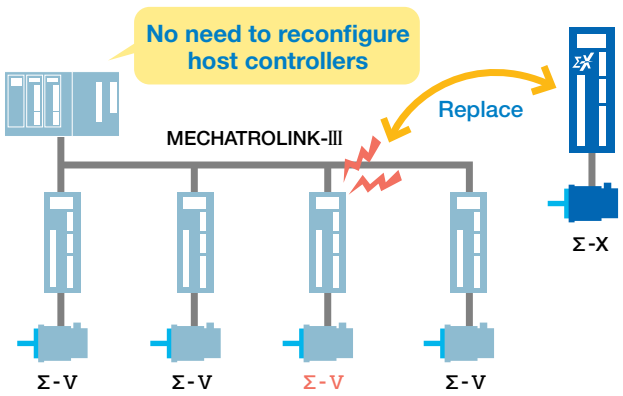
Set Value	4	6	8	A
Function	20-bit	22-bit	24-bit	26-bit

Installation compatibility of SERVOPACKs and servomotors

Servomotors compatible with Σ-7 are available, ensuring compatibility of installation. Σ-7 series cables can also be used.

Example of after-sales service

In case of servo failure, users can isolate affected axes for replacement with Σ-X models, following the 3 steps above. This enables prompt recovery.



Compatible standards with FT specifications

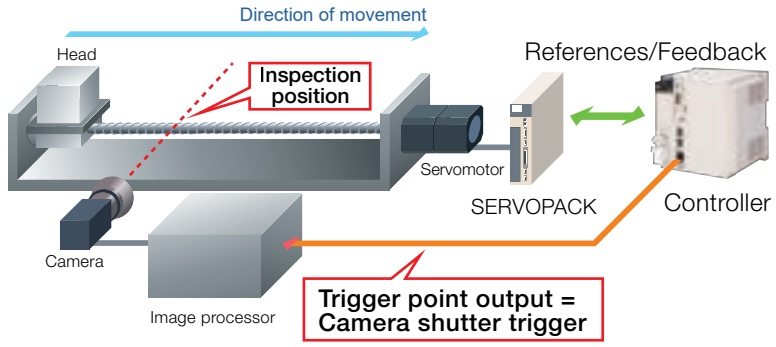
In the Σ-7 series, functions that were available separately in a lineup of models with optimized applications (FT specifications) have been enhanced and integrated into the standard Σ-X SERVOPACK.

Reduced ☑ Inventory control workload

Triggers at preset positions function with integrated Σ-7 FT62 specification

When a moving part of a machine passes the preset reference positions, the servo outputs signals at preset positions, which speeds up the equipment.

System for outputting triggers at preset positions using a controller

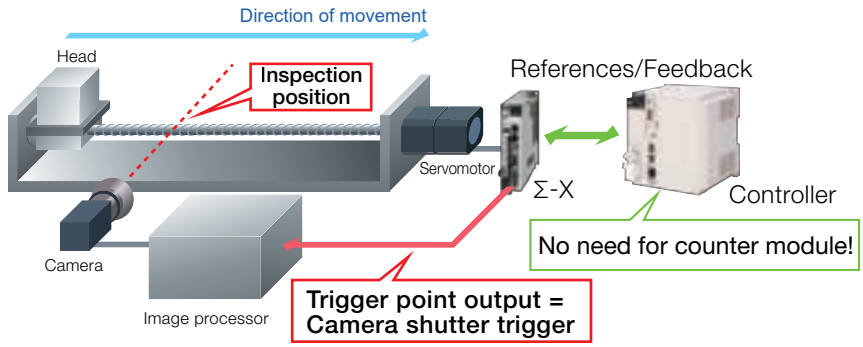


In a conventional system for outputting triggers at preset positions, the controller's counter module receives the divided pulse output from the servo, detects the preset reference positions that have been passed, and outputs a trigger signal.

Problem

The trigger output signal is dependent on the processing cycle of the controller application.

System for outputting triggers at preset positions using the Σ-X standard SERVOPACK



In the system for outputting triggers at preset positions using the Σ-X standard SERVOPACK, the servo outputs a trigger signal when it detects that the preset reference positions have been passed.

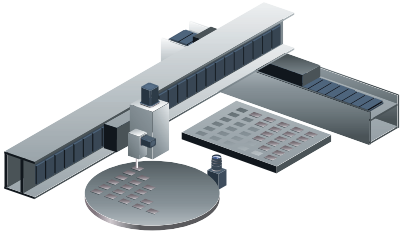
Improvement

A trigger signal is output with the high-speed processing cycles of the servo drive, which reduces delays in output times.

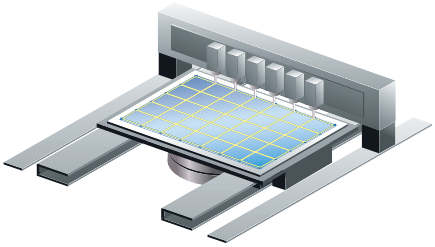
Applications

All devices that require an output process linked to a point through which a servo mechanism passes.

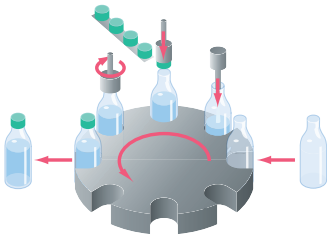
Trigger setting to start image processing
- Dicers
- Mounters



Output timing to start processing
- Laser processors
- Dispensers



Use of triggers at preset positions for rotary tables
- Parts conveyance (transfer)
- Board inspection equipment, etc.

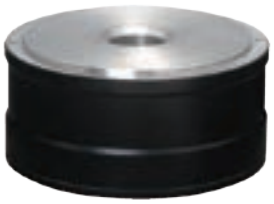


SGM7D motor drive with integrated Σ-7 FT82 specification

Ideal for applications that require high torque, high precision, and high rigidity

Previously with the Σ-7 series, a separate FT specification SERVOPACK was required to drive the SGM7D, but this can now be performed with the standard Σ-X SERVOPACK.

With core, outer rotor
Small and medium capacity: SGM7D



4 More Compact/ Less Wiring

Multi-axis amplifiers for more compact sizes and reduced wiring

The introduction of Σ -X-Series multi-axis amplifiers mitigates the increase in control panel size and wiring time that are usually required when the number of axes is increased.

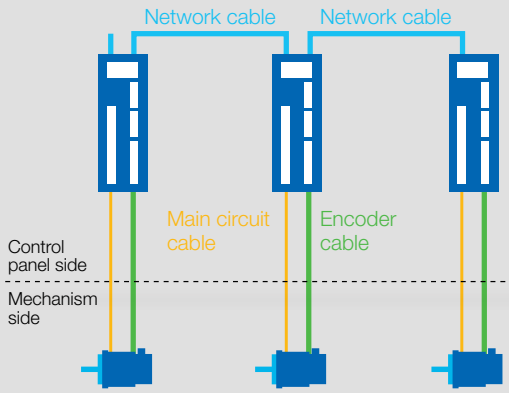
- ☑ Amplifier installation footprint
- ☑ Wiring man-hours due to additional axes

Three-axis integrated amplifiers for more compact sizes and reduced wiring

The three-axis amplifier Σ -XT, and the Σ -LINK II that locates the encoder wiring on the mechanism side, reduce the amplifier installation footprint and wiring.

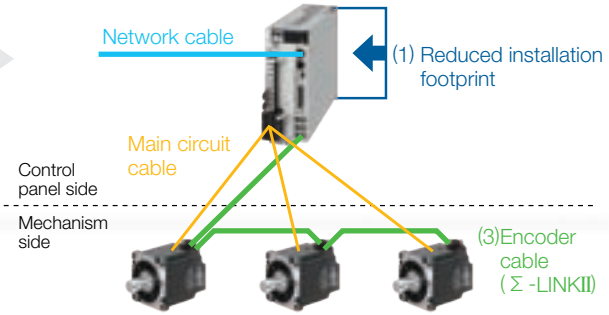
Earlier model

The SERVOPACK is connected to each axis with a network cable, and encoder cables connect motors one-to-one.



Σ-X

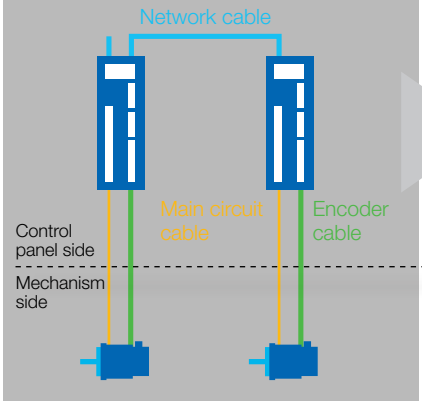
(1) Reduced amplifier installation footprint (37.5% reduction for 400 W*3 model)
(2) Reduced network cable wiring (from 3 cables to 1)
(3) Σ -LINK II reduces wiring by locating encoder wiring on the mechanism side
Plus, standardization of the main circuit enables use of regenerative energy for drive energy



Two-axis integrated amplifiers for reduced wiring

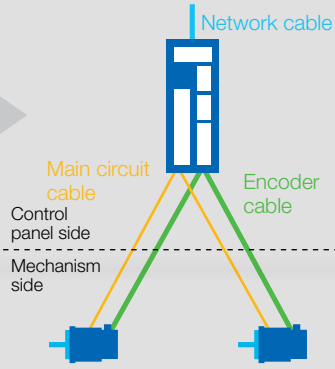
Earlier model

Single-axis SERVOPACK only is provided. Network cables are needed between axes



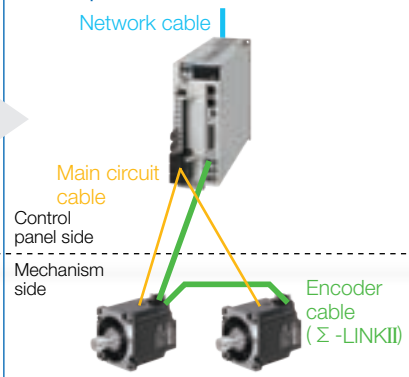
Earlier model

Two-axis SERVOPACK reduces network cable wiring + uses inter-axis regenerative energy for driving



Σ-X

Enables Σ -LINK II connection, encoder cable wiring on the mechanism side (reduces number of wires between control panel and mechanism)



Features of application-optimized SERVOPACK (FT specification)

We use the know-how accumulated in different markets to develop SERVOPACKs (FT specifications) equipped with functions that are optimized for different applications. Helps increase added value of equipment.

- ☑ Press and injection molding application (FT40)
  - ☑ Pressure control function
- ☑ Customized Sensing Data Function (FT55)
  - ☑ Sensing data collection/primary analysis
- ☑ Customized Sensing Data Function (with Custom Motion Function) (FT56)
  - ☑ Sensing data collection/primary analysis
  - ☑ Motion control based on data
- ☑ Gantry application function (FT70)
  - ☑ Optimized function for driving a gantry (gantry application function)
  - ☑ Torque/force assistance

Features

FT Specifications	Applications	Function	Features
FT40	Press and Injection Molding	Pressure control function	Pressure sensor signals sent to the SERVOPACK enable high-precision pressure control.
FT55	Sensing data collection/primary analysis	Customized Sensing Data Function	Data gathered from various sensors is analyzed based on user application. Able to use sensing data on the same time axis as motion data via Σ -LINK II.
FT56	Sensing data collection/primary analysis Motion control based on data	Customized Sensing Data Function (with Custom Motion Function)	Custom motion function enables motion control to be performed from the servo user application. Reduces the load on the host controller and enables high-speed motion control independent of the surrounding environment.
FT70	Gantry drive applications	Gantry application function	Enables optimal control of difficult-to-control gantry mechanisms.
		Torque/force assist function	Multiple SERVOPACKs can be coordinated and operated to construct high-thrust (torque) systems.

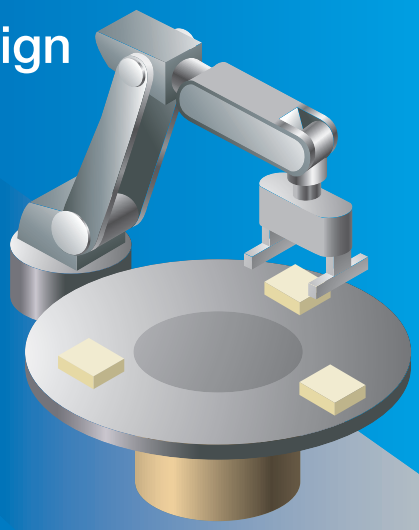
Product system

FT Specifications	SERVOPACKs	Communications References	Applicable Motors		
			Rotary Servomotor	Direct drive Servomotor	Linear Servomotor
FT40	Σ -XS	MECHATROLINK-4/Ⅲ, EtherCAT	○	○	○
FT55	Σ -XS	MECHATROLINK-4/Ⅲ	○	○	○
FT56	Σ -XS	MECHATROLINK-4	○	○	○
FT70	Σ -XS, Σ -XW	MECHATROLINK-4/Ⅲ, EtherCAT	○	×	○

Features of Direct Drive Servomotors

☑ Compact, space-saving design

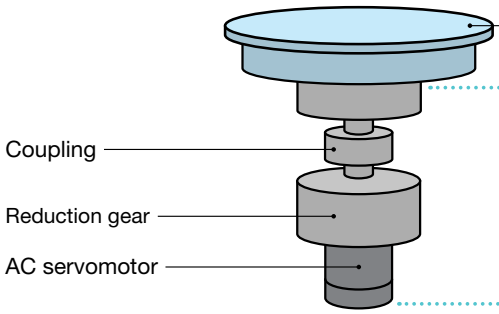
- ☑ Energy-efficient
- ☑ High accuracy
- ☑ Can accelerate design processes
- ☑ No looseness or backlash



Direct drive servomotors drive loads directly without a reduction gear, supplying high torque at low speeds and offering fast, accurate positioning without looseness or backlash.

<Example in an index table>

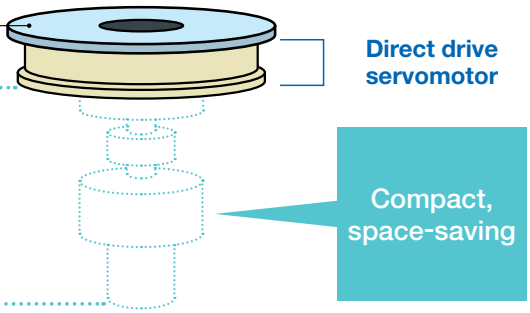
With conventional AC servomotors



Current limitations

- Reduced positioning accuracy due to looseness and backlash
- Noise
- Maintenance required for wear and lubrication

With direct drive servomotors



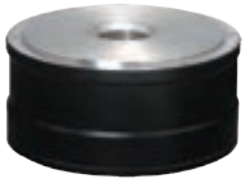
Technical improvements

- Improved positioning accuracy, from direct connection to loads
- Low noise
- Hollow design simplifies wiring/piping
- Fewer parts, for faster design and more economical maintenance
- No loss of efficiency from a reduction gear; enables energy-saving equipment
- Clean operation, without gears or need for lubricating oil
- Easy to set operation angle and number of divisions via command values

With core, outer rotor

Small and medium capacity: SGM7D

Ideal for applications that require high torque, high precision, and high rigidity



Outer rotor*

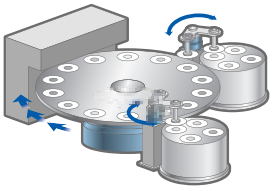
The outside of the motor rotates.

- Built-in 24-bit encoder
- Application to large loads possible with a high allowable load moment of inertia ratio
- Large center aperture design provides more space available for wiring connections
- High rigidity

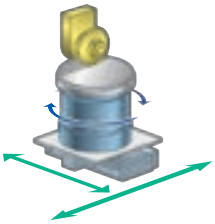
*A magnetic bias is used that places a strong permanent magnet between the stator and core.

Applications

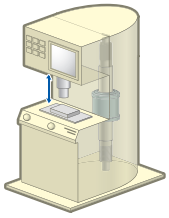
Rotary tables (Can handle large loads)



Semiconductor manufacturing equipment



Machine tools



Coreless, inner rotor

Small capacity: SGM7E

Ideal for applications that require smooth movement without speed fluctuations

Inner rotor

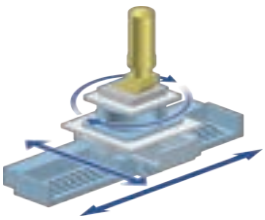
The inside of the motor rotates.

- Built-in 24-bit encoder
- Low cogging with a core-less system provides smooth operation free from speed variations

Applications

Spinning (CMP equipment, washing machines)

Printing rolls



With core, inner rotor

Small and medium capacity: SGM7F

Ideal for applications that require downsizing and a shorter takt time

Inner rotor

The inside of the motor rotates.

- Built-in 24-bit encoder
- Compact design with small rotor diameter
- High-speed, high-frequency positioning
- Low inertia
- Low heat generation

Applications

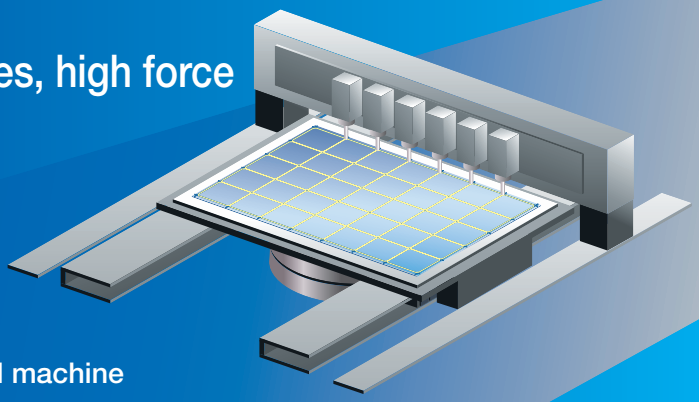
Indexers

Sorters and bonders

Features of Linear Servomotors

☑ High-speed, high-accuracy positioning

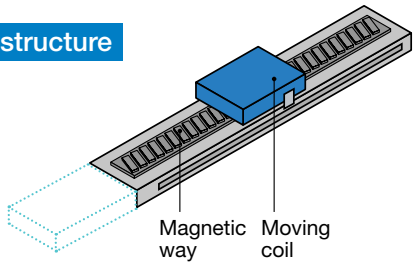
- ☑ Fast acceleration
- ☑ Easily enables long strokes, high force
- ☑ Low heat generation
- ☑ Maintenance-free, from the standpoint of part wear and lubrication



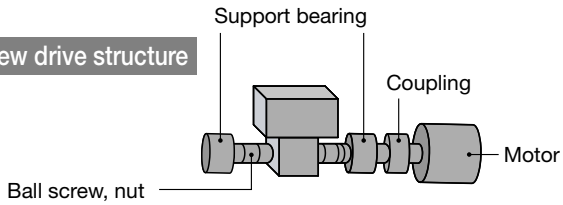
Linear servomotors contribute to improved machine functionality and performance with exceptional features such as high speed, fast acceleration/deceleration, long-stroke compatibility, constant speed, safety, clean and quiet operation, and low maintenance.

<Differences between linear drive and ball screw drive>

Linear drive structure



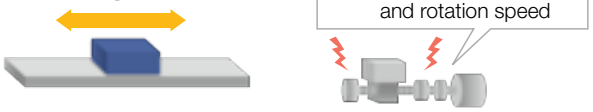
Ball screw drive structure



● High speed

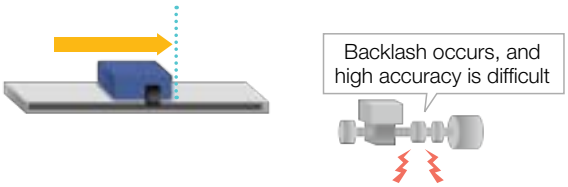
High-speed operation without inherent mechanical speed limitations.

Maximum speed: 5.0 m/s



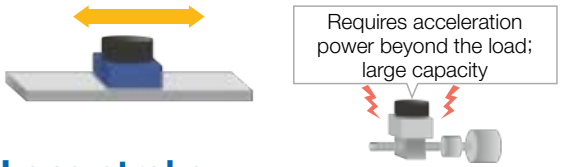
● High positioning accuracy

Accurate positioning at the submicron level.



● Fast acceleration/deceleration

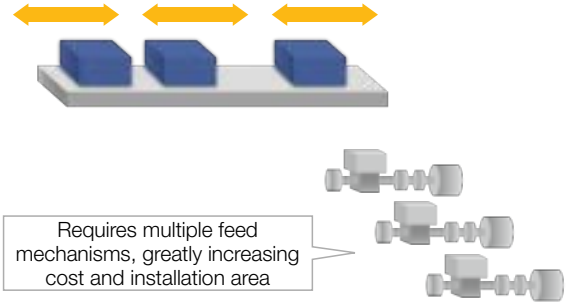
Acceleration is determined solely by the motor and load. Reducing loads **greatly increases acceleration.**



● Multi-head

Independent control of multiple moving parts, small installation area.

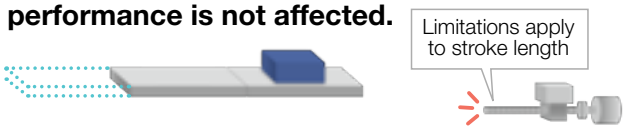
Higher productivity, from a simple structure.



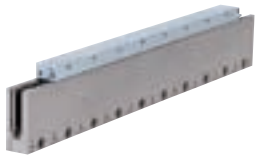
● Long stroke

Stroke length is easy to extend.

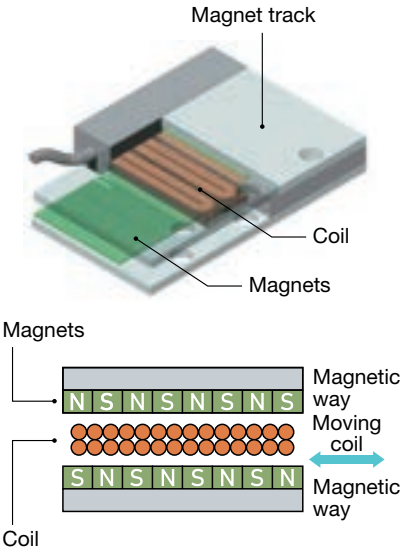
Without mechanical restrictions, servo performance is not affected.



Coreless
SGLG

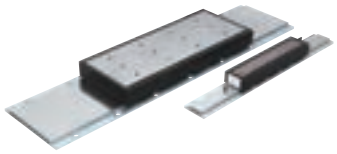


Low-noise and longer guide service life without magnetic attraction. Zero cogging, for minimal force ripple.

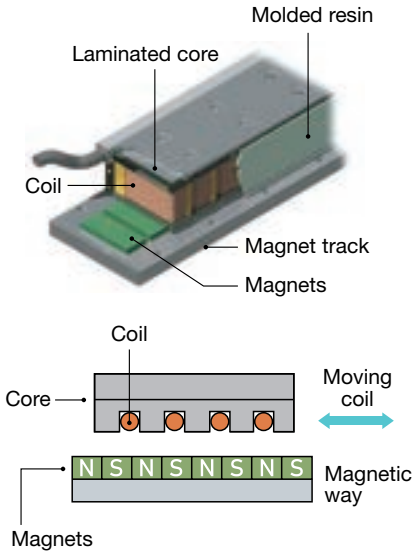


- The moving coil has no iron core and consists of an accurately resin-molded coil.
- The magnetic way consists of two opposing plates holding accurately positioned magnets.

With Core
SGLFW2



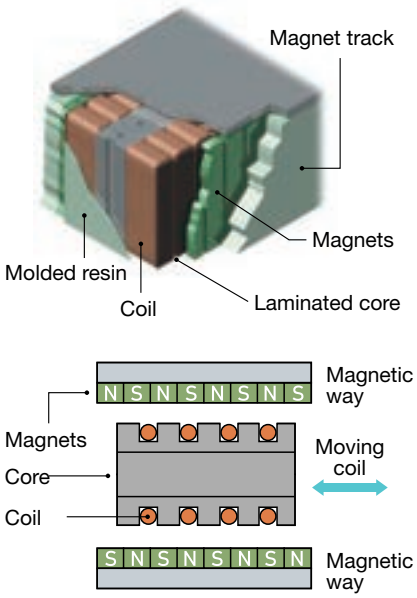
Large magnetic attraction between moving/fixed parts can be used to create a preload on the bearings. Frictional force from the magnetic attraction can reduce deceleration force.



- The moving coil consists of a slotted, laminated core holding the pre-wound coil, with the entire unit encapsulated in resin.
- The magnetic way consists of a row of accurately positioned magnets on a plate facing the core.

With Core
SGLT

Original structure negates magnetic attraction to minimize noise and extend guide life. Negligible cogging force.



- The moving coil consists of a slotted, laminated core holding the pre-wound coil, with the entire unit encapsulated in resin.
- The magnetic way consists of rows of accurately positioned magnets on plates facing the core.

Applications

Multiple heads

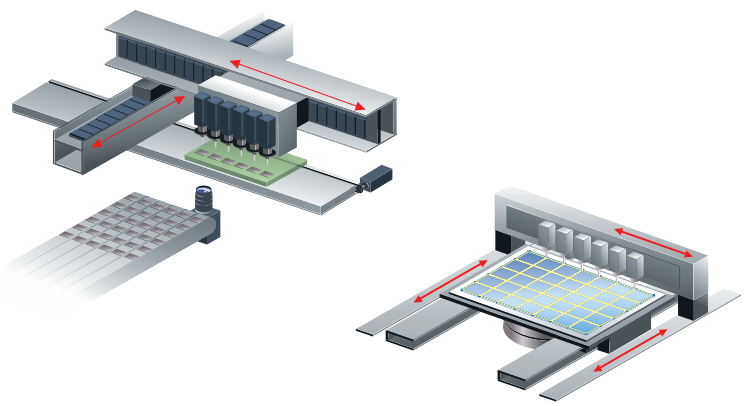
LCD and OLED manufacturing equipment such as dispensers or inspection or repair equipment

Linear stages (X, Y)

LCD and OLED manufacturing equipment (for G 5.5 or larger glass substrates, or for long strokes), semiconductor manufacturing equipment such as probers

Gantries

Electronic component manufacturing equipment such as high-speed mounters



Product Lineup

Servomotor

Rotary Servomotors

Model	SGMXJ
Rated Output	50W ~ 750W

- Medium inertia, high speed
- 26-bit encoder
- Maximum rotation speed: 7000 min^{-1}

Model	SGMXA
Rated Output	50W ~ 7.0kW

- Low inertia, high speed
- 26-bit encoder
- Maximum rotation speed: 7000 min^{-1}

Model	SGMXP
Rated Output	100W ~ 1.5kW

- Medium inertia, flat type
- 26-bit encoder
- Maximum rotation speed: 7000 min^{-1}

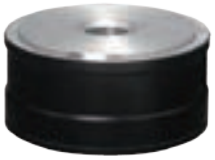
Model	SGMXG
Rated Output	300W ~ 15kW

- Medium inertia, high torque
- 26-bit encoder
- For feed shaft driving (high-speed feed)

Model	SGM7M
Rated Output	11W ~ 33W

- Low inertia, Super-compact
- 20-bit encoder
- Maximum rotation speed: 7000 min^{-1}

Direct Drive Servomotors



Model	SGM7D
Rated Torque	1.30 N·m – 240 N·m

- Ideal for applications that require high torque, high accuracy, and high rigidity
- Supports large loads, with a high allowable load moment of inertia ratio
- Large center aperture design provides wiring space

Model	SGM7E
Rated Torque	2.00 N·m – 35.0 N·m

- Ideal for applications that require smooth movement without speed fluctuations
- Low cogging with a core-less system provides smooth operation free from speed variations
- High mechanical precision for runout at end of shaft and runout of shaft surface (0.01 mm)

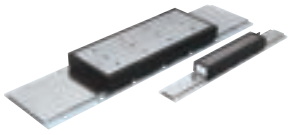
Model	SGM7F (small capacity)	SGM7F (medium capacity)
Rated Torque	2.00 N·m – 35.0 N·m	45.0 N·m – 200 N·m

- Ideal for applications that require downsizing and high-speed, high-frequency positioning
- Low heat generation
- High mechanical precision for runout at end of shaft and runout of shaft surface (0.01 mm)

Linear Servomotors

Model	SGLG
Rated Force	12.5 N – 750 N

- Low-noise and longer guide service life without magnetic attraction
- Zero cogging, for minimal force ripple



Model	SGLFW2
Rated Force	45 N – 2520 N

- Large magnetic attraction can be used to create a preload on the bearings
- Frictional force from the magnetic attraction can reduce deceleration force

Model	SGLT
Rated Force	130 N – 2000 N

- Original structure negates magnetic attraction to minimize noise and help extend guide life
- Negligible cogging force

SERVOPACKs

Σ-XS (Single-axis)

Interface	Analog Voltage/Pulse Train
Model	SGDXS-□□□A00A

- Select and use analog voltage speed/torque reference and pulse train position reference by configuring parameter settings

Interface	MECHATROLINK-4/Ⅲ
Model	SGDXS-□□□A40A

- Select MECHATROLINK-4 or MECHATROLINK-III from the same hardware
- Enables torque, position, and speed control as well as synchronized phase control that relies on exceptional precision

Interface	EtherCAT
Model	SGDXS-□□□AA0A

- Implements the CiA 402 CANopen drive profile for EtherCAT communications (real-time Ethernet communications)
- Provides an EtherCAT interface for the Σ-X series' high-level servo control performance, advanced tuning functions, and full-featured actuator control

Σ-XW (Two-axis)

Interface	MECHATROLINK-4/Ⅲ
Model	SGDXW-□□□A40A

- Select MECHATROLINK-4 or MECHATROLINK-III from the same hardware
- Enables torque, position, and speed control as well as synchronized phase control that relies on exceptional precision
- Use regenerative energy from multiple axes as drive energy

Interface	EtherCAT
Model	SGDXW-□□□AA0A

- Implements the CiA 402 CANopen drive profile for EtherCAT communications (real-time Ethernet communications)
- Provides an EtherCAT interface for the Σ-X series' high-level servo control performance, advanced tuning functions, and full-featured actuator control
- Use regenerative energy from multiple axes as drive energy

Σ-XT (Three axis)

Interface	MECHATROLINK-4/Ⅲ
Model	SGDXT-□□□A40A

- Select MECHATROLINK-4 or MECHATROLINK-III from the same hardware
- Enables torque, position, and speed control as well as synchronized phase control that relies on exceptional precision
- Less Wiring/Smaller Footprint

Interface	EtherCAT
Model	SGDXT-□□□AA0A

- Implements the CiA 402 CANopen drive prole for EtherCAT communications (real-time Ethernet communications)
- Provides an EtherCAT interface for the Σ-X series' high-level servo control performance, advanced tuning functions, and full-featured actuator control
- Less Wiring/Smaller Footprint

Product Lineup (Continued)

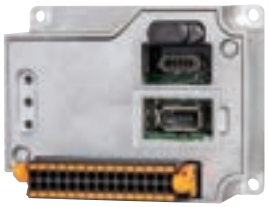
SERVOPACKs

Option Module

Interface	Fully-Closed Module
Model	SGDV-OFA01A

- High-accuracy, high-response positioning by using feedback signals from a detector installed on the machine
- Compatible with high-resolution external encoders

Σ-LINK II Related Products



Name	Sensor Hub
Model	Digital I/O Type : JUSP-SL2HD440□AA Analog Input Type : JUSP-SL2HA440□AA

- Connect multiple limit switches, relays, or other devices to the encoder wiring

Name	Branch Tap
Model	JUSP-SL2J3AA

- Connect multiple encoder wirings and sensor hubs

Name	Booster unit
Model	JUSP-SL2B1AA

- Extend the length of Σ-LINK II communication cable between nodes and the total wiring length.

Support Tools

AC servo capacity selection software

SigmaSize+

- Select the optimal Yaskawa servo products for your machinery. Covers all standard servo products available from Yaskawa.

AC servo drive engineering tool

SigmaWin+ Ver.7

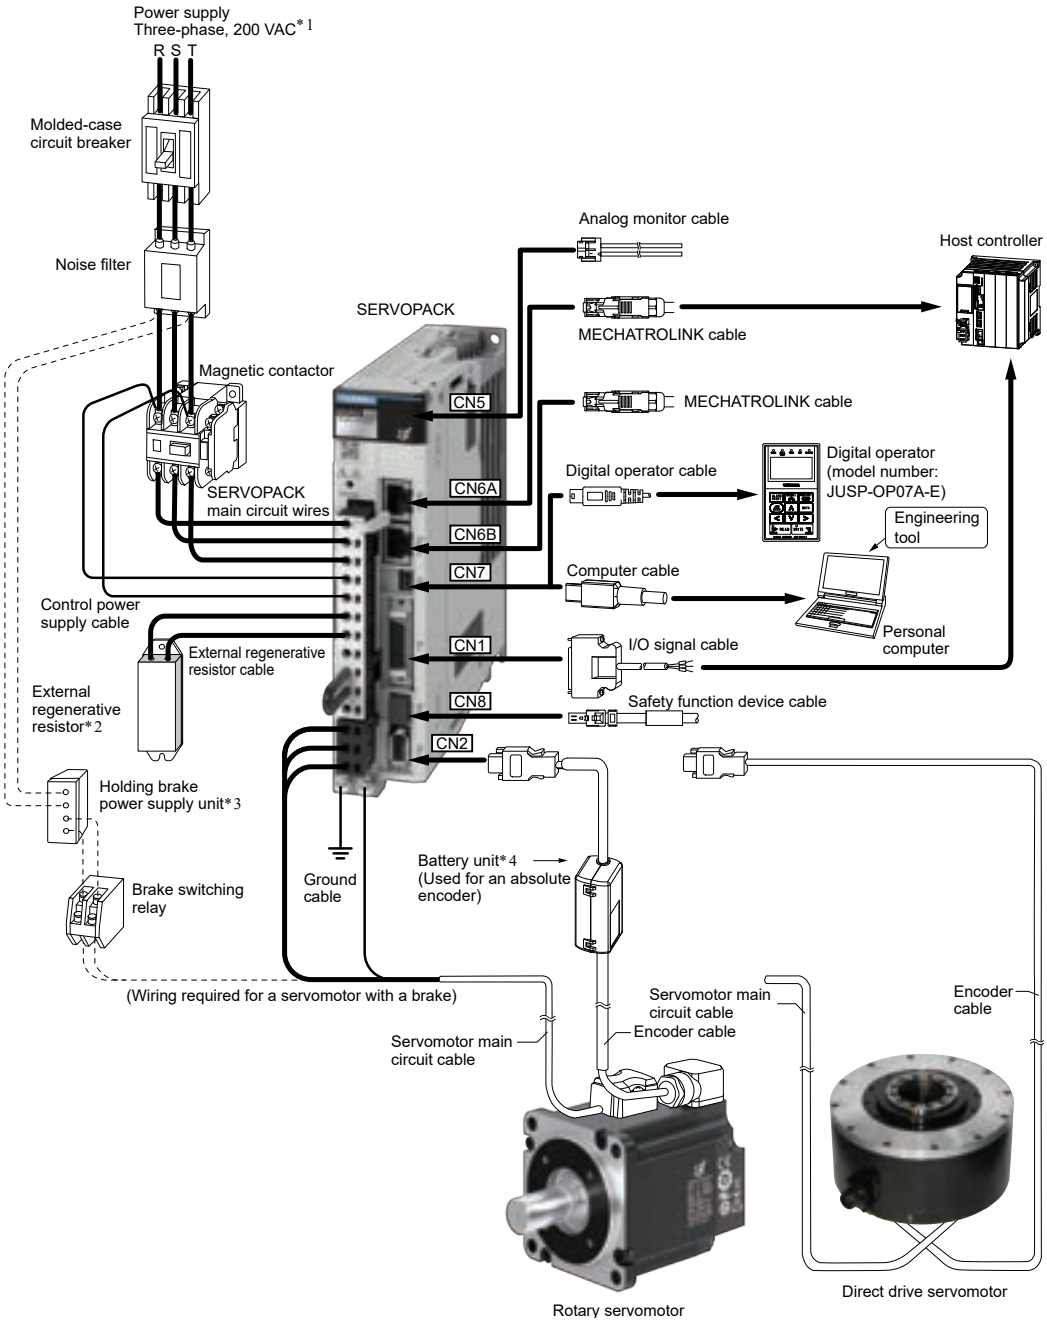
- Supports operations from setup to tuning and maintenance.

MEMO

System Configuration Examples

Combination of Σ-X SERVOPACK and Rotary Servomotor/Direct Drive Servomotor

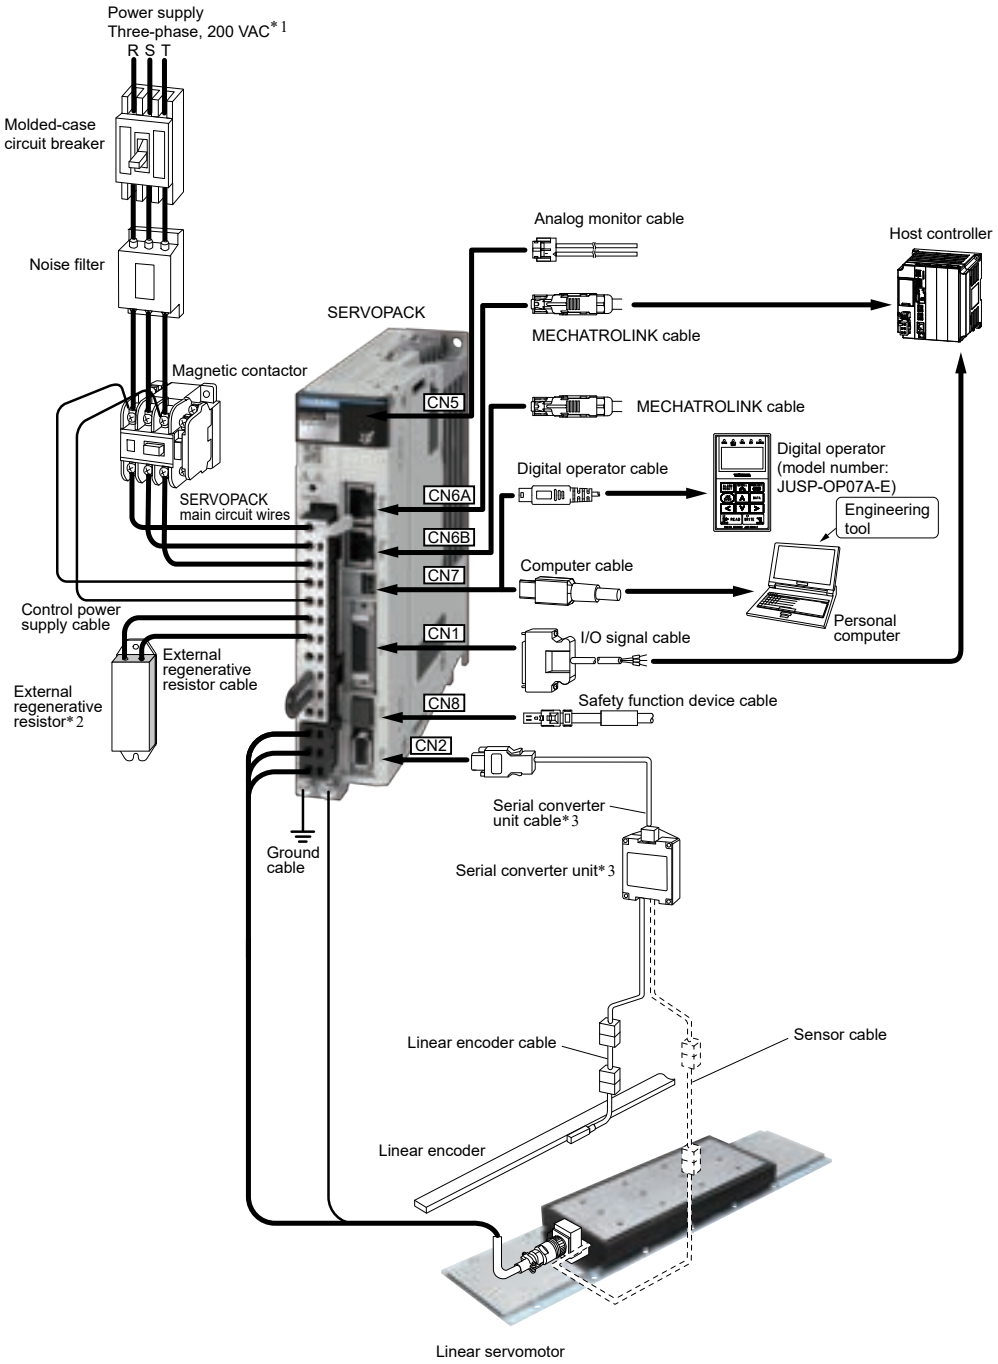
●For MECHATROLINK-4/Ⅲ Communications/Three-phase 200 VAC



∗1 This example is for a SERVOPACK with a three-phase, 200-VAC power supply input. The pin layout of the main circuit connector depends on the voltage.
∗2 External regenerative resistors are not provided by Yaskawa.
∗3 The power supply unit for the holding brake is not provided by Yaskawa. Select a power supply unit based on the holding brake specifications. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.
∗4 No battery unit is required when using a servomotor equipped with a batteryless absolute encoder.

Combination of Σ-XS SERVOPACK and Linear Servomotor

●For MECHATROLINK-4/Ⅲ Communications/Three-phase 200 VAC

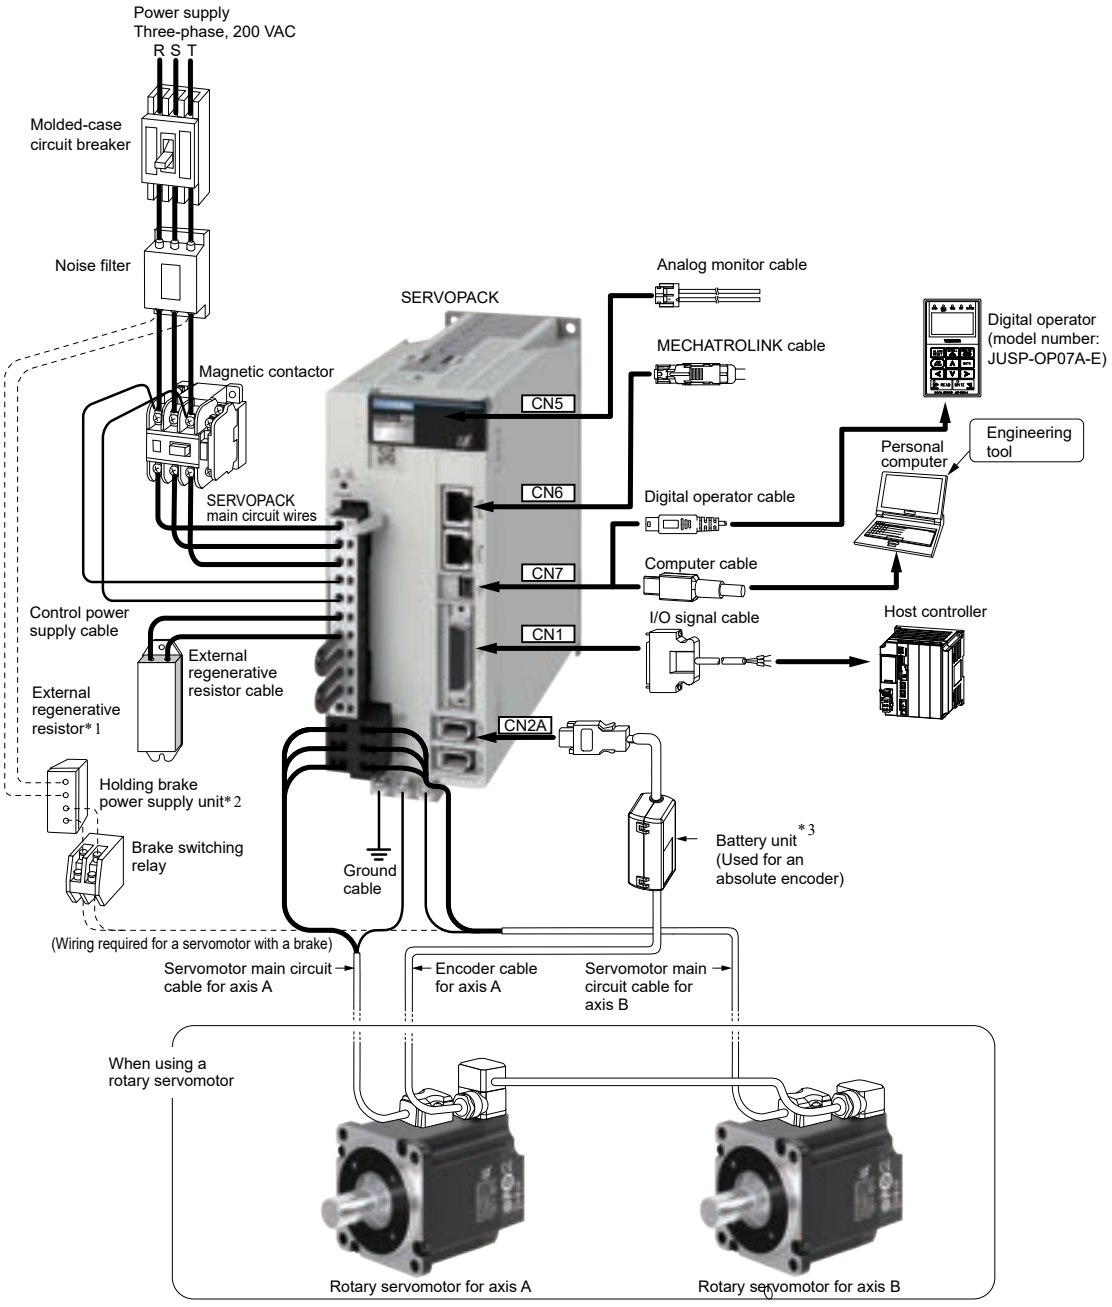


∗1 This example is for a SERVOPACK with a three-phase, 200-VAC power supply input. The pin layout of the main circuit connector depends on the voltage.
∗2 External regenerative resistors are not provided by Yaskawa.
∗3 Only required when using an incremental linear encoder (manufactured by Dr. JOHANNES HEIDENHAIN GmbH or Renishaw PLC).

System Configuration Examples (Continued)

Combination of Σ-XW SERVOPACK and Rotary Servomotor

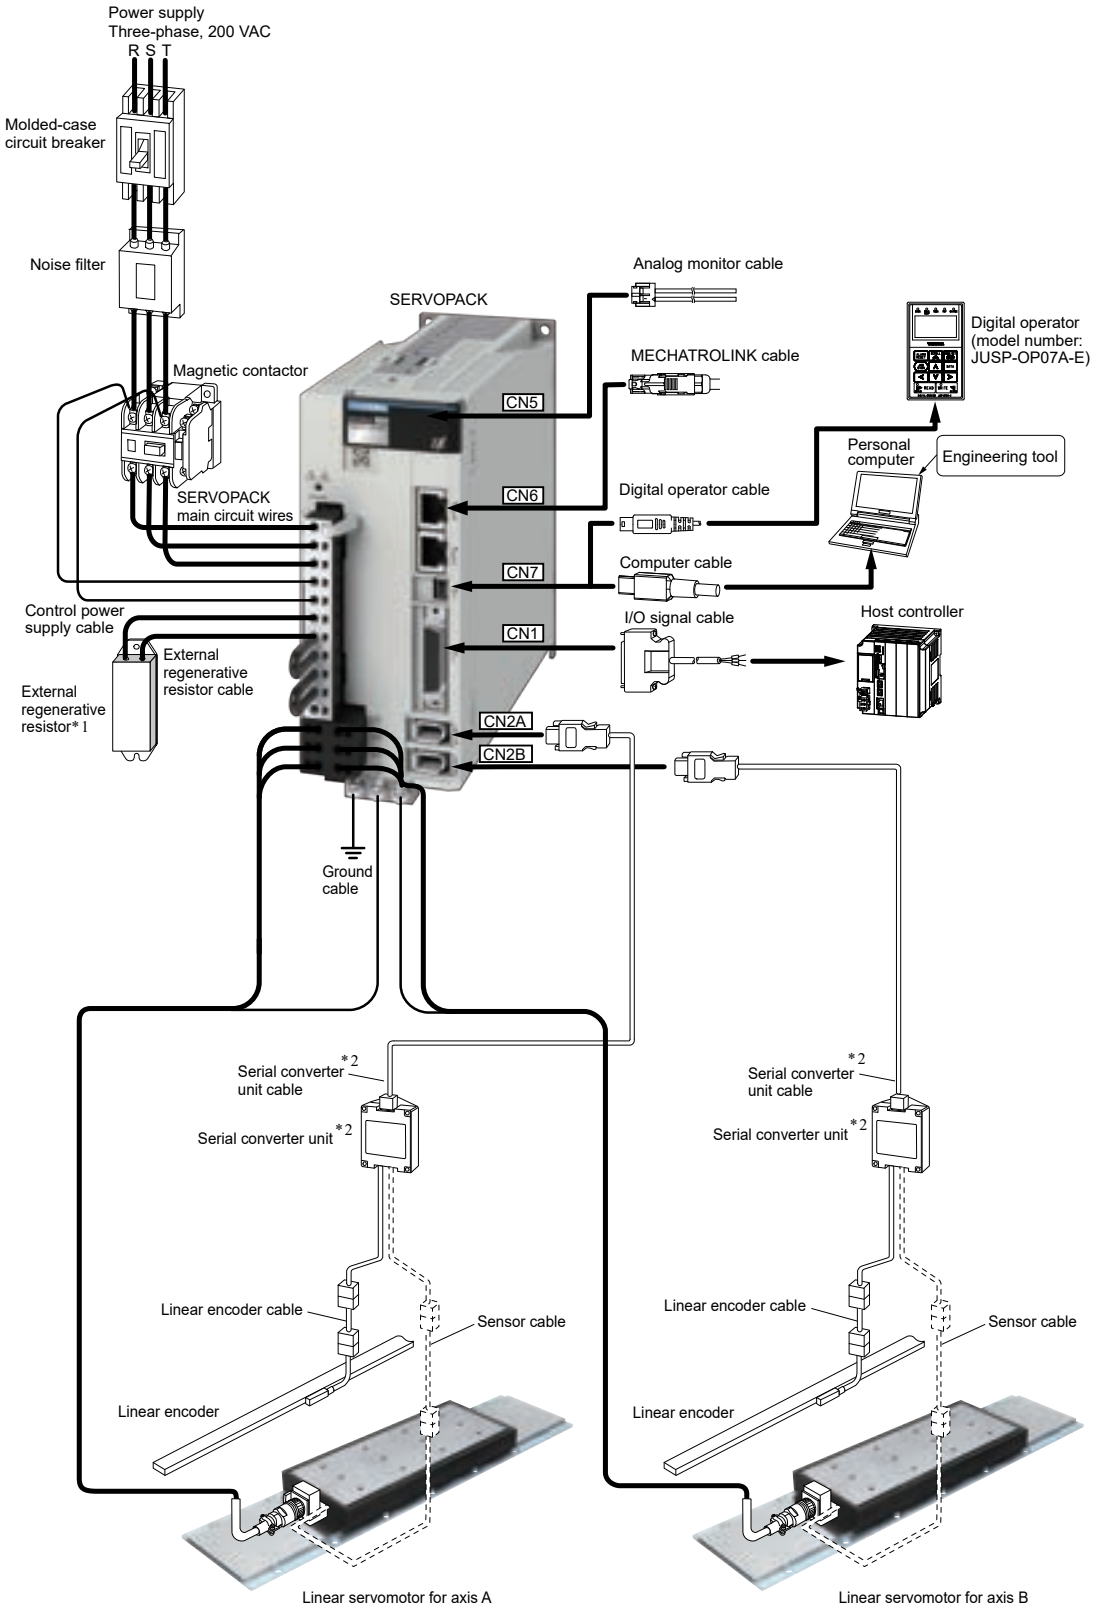
●For MECHATROLINK-4/Ⅲ Communications/Three-phase 200 VAC



∗1 External regenerative resistors are not provided by Yaskawa.
∗2 The power supply unit for the holding brake is not provided by Yaskawa. Select a power supply unit based on the holding brake specifications. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.
∗3 No battery unit is required when using a servomotor equipped with a batteryless absolute encoder.

Combination of Σ-XW SERVOPACK and Linear Servomotor

●For MECHATROLINK-4/Ⅲ Communications/Three-phase 200 VAC



∗1 External regenerative resistors are not provided by Yaskawa.
∗2 Only required when using an incremental linear encoder (manufactured by Dr. JOHANNES HEIDENHAIN GmbH or Renishaw PLC).

System Configuration Examples (Continued)

	SGM7M-A2A	22 W			
	SGM7M-A3A	33 W	1R6A		

*1: If you use this combination, performance may not be as good as with Σ-XS SERVOPACKs. For example, gain control may not improve.
*2: 2.4 kW when using the servomotor with a SGDXS-200A SERVOPACK.
*3 : If you want to increase instantaneous maximum torque, use the SERVOPACK model number shown in the brackets.
Refer to the following manual for details for each SERVOPACK's instantaneous maximum torque.
Σ-X-Series AC Servo Drive Rotary Servomotor Product Manual (Manual No.: SIEP C230320 00)

● Combinations of Direct Drive Servomotors and SERVOPACKs

✻1 You must also use a Yaskawa serial converter unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the serial converter unit.
✻2 The multiplier (number of divisions) depends on the linear encoder. Also, you must write the motor constant file to the linear encoder in advance.
✻3 The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a Yaskawa SERVOPACK. The actual speed will be restricted by either the maximum speed of the linear servomotor or the maximum speed of the linear encoder (given above).
✻4 If you use the origin signals with a linear encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.
✻5 Use this model number to purchase the serial converter unit.
✻6 Use this model number to purchase the sensor head with interpolator.
✻7 Use this model number to purchase the interpolator.
✻8 Contact your Yaskawa representative.
Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the encoder before you use it.

*1 The multiplier (number of divisions) depends on the linear encoder. Also, you must write the motor constant file to the linear encoder in advance.
*2 These are reference values for setting SERVOPACK parameters. Contact the manufacturer for actual linear encoder scale pitches.
*3 The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a Yaskawa SERVOPACK. The actual speed will be restricted by either the maximum speed of the linear servomotor or the maximum speed of the linear encoder (given above).
*4 Contact Mitutoyo Corporation for details on this encoder.
*5 Sales of the interface unit EIB3391Y combination LIC4100 and LIC2100 series have ended due to the release of the LIC4190 and LIC2190 series.
*6 The speed is restricted for some SERVOPACKs.
Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the encoder before you use it.

● Absolute Rotary Encoders The following absolute rotary encoders are for fully-closed control. Can not use it to control the motor.

Output Signal	Manufacturer	Rotary Encoder Type	Model		Relay Device between Fully-Closed Module and Rotary Encoder	Resolution bits	Maximum Speed*1 min-1
			Scale	Sensor Head			
Encoder for Yaskawa's Serial Interface (Σ-LINK)	Magnescale Co., Ltd.	Shield	RU77-4096ADF*2		–	20	2000
			RU77-4096AFFT01*2		–	22	2000
	Dr. JOHANNES HEIDENHAIN GmbH	Exposed	ECA4412*2		EIB3391Y	27	1600
						28	800
						29	400
		Shield	RCN2□10*2			26	3000
			RCN5□10*2			28	800
			RCN8□10*2			29	400
			ROC2310*2			26	3000
			ROC7310*2			28	800
	Renishaw PLC	Exposed	RA23Y-□□□□□□□□□*2		–	23	14600
			RA26Y-□□□□□□□□□*2		–	26	3250
			RA30Y-□□□□□□□□□*2		–	30	200

*1 The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a Yaskawa SERVOPACK. The actual speed will be restricted by either the maximum speed of the rotary servomotor or the maximum speed of the rotary encoder (given above).
*2 This is a single-turn absolute encoder.
Note: Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the encoder before you use it.

*1 You can use these models with either a single-phase or three-phase input.
*2 If you use the SERVOPACK with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.
If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65%.
((90% + 40%)/2 = 65%)
*3 The same SERVOPACKs are used for both rotary servomotors and linear servomotors.

*1 You can use these models with either a single-phase or three-phase input.
*2 If you use the servomotor with a single-phase power supply input, derate the total continuous output of the motors to 65% of maximum applicable motor capacity × number of axes. Example: For the SGDXT-2R8A, make the output 0.4 kW × 3 axes × 65% = 0.78 kW or less. To perform operation at an output of 0.4 kW for the first axis and 0.2 kW for the second axis, you must limit the output for the third axis to 0.18 kW or less.
*3 The same SERVOPACKs are used for both rotary servomotors and linear servomotors.

Yaskawa Electric's Cloud-based Service

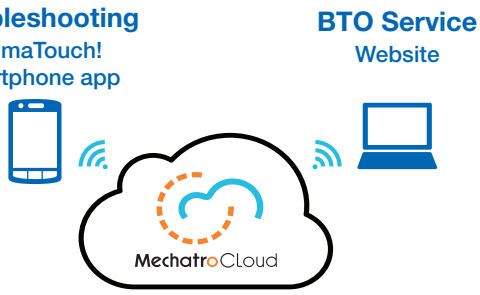
MechatroCloud

Free to use

Services linked to data in the cloud

MechatroCloud offers several cloud-based services for motion control products, available online and by using a smartphone app and QR codes on Yaskawa products.

Note: MechatroCloud is available in Japan only.



Troubleshooting anytime, anywhere from a smartphone

SigmaTouch! (smartphone app) Coming Soon

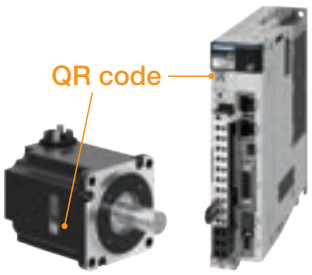
Easily find product information using SigmaTouch!

To view product manufacturing information, parameter lists, and more, simply start the smartphone app and scan a QR code on Yaskawa products. Download SigmaTouch! for free from Google Play.

Improve troubleshooting

View Σ-X SERVOPACK manuals and troubleshooting tips on-site. Viewing trace waveforms after alarms occur also helps you quickly identify underlying causes, reducing downtime.

Download the app → **Start SigmaTouch!** → **Scan the QR code** → **Easier troubleshooting**



- View product manuals
- Alarm list
- Parameter list
- Inquiries and more

Note: Positions of QR codes vary by product.

Online ordering of customized SERVOPACKs

Build-to-order (BTO) service Currently in development

Customize parameter values before delivery

Customize specifications and place single or multiple orders from the MechatroCloud website. With no need to write parameters at assembly sites, you can reduce production lead time.

- Register parameter values before delivery
- Register your preferred text, such as axis names

Example of nameplate

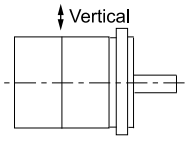
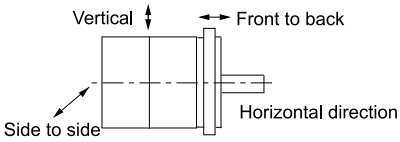
*1 A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the servomotor without a load at the rated rotation speed.

*2 The given values are for when the servomotor shaft is mounted horizontally and impact or vibration is applied in the directions shown in the following figures. The strength of the vibration that the servomotor can withstand depends on the application. Always check the vibration acceleration that is applied to the servomotor with the actual equipment.



Impact Applied to the Servomotor



Vibration Applied to the Servomotor

*3 Refer to the following section for the derating rates.
☞ *Derating Rates on page 60*

*4 If you use this combination, performance may not be as good, e.g., the control gain may not increase, in comparison with using a Σ-XS SERVOPACK.

Allowable Load Moment of Inertia (Rotor Moment of Inertia Ratio) *6	At 6000 min^{-1}		35 times	35 times	35 times	15 times	10 times	20 times	12 times
	At 7000 min^{-1}					10 times	5 times	15 times	8 times
	With External Regenerative Resistor and External Dynamic Brake Resistor *7	At 6000 min^{-1}	35 times	35 times	35 times	25 times	25 times	20 times	15 times
		At 7000 min^{-1}							
Allowable Shaft Loads *8	LF	mm	20			25			35
	Allowable Radial Load	N	78			245			392
	Allowable Thrust Load	N	54			74			147

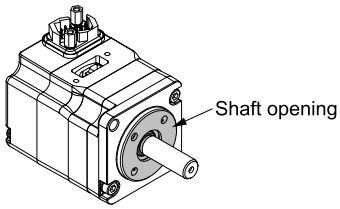
*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

*3 Refer to the following section for the relation between the heat sinks and derating rate.

☞ *Servomotor Heat Dissipation Conditions on page 60*

*4 This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.



*5 Observe the following precautions if you use a servomotor with a holding brake.

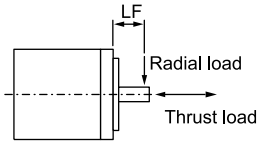
- The holding brake cannot be used to stop the servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6 The rotor moment of inertia scaling factor is the value for a standard servomotor without a holding brake.

*7 To externally connect a dynamic brake resistor, select hardware option specification 0020 for the SERVOPACK.
However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

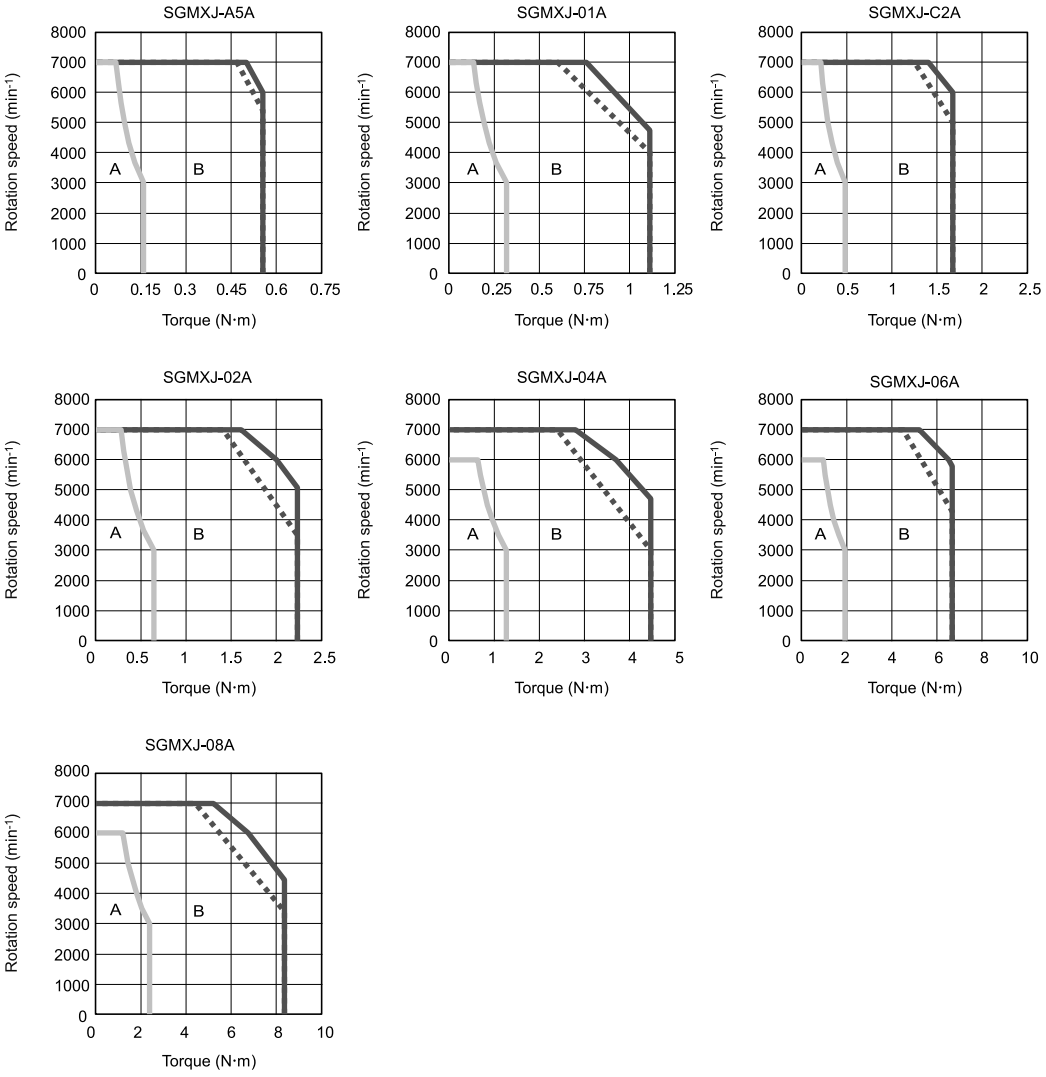
- SGDXS-R70A□□A0020 to -2R8A□□A0020
- SGDXW-1R6A□□A0020, -2R8A□□A0020
- SGDXT-1R6A□□A0020, -2R8A□□A0020

*8 Design the mechanical system so that the thrust and radial loads applied to the servomotor shaft end during operation do not exceed the values given in the table.



Torque-Rotation Speed Characteristics

A : Continuous duty zone —— (solid lines): Three-phase, 200 V
B : Intermittent duty zone ····· (dotted lines): Single-phase, 200 V



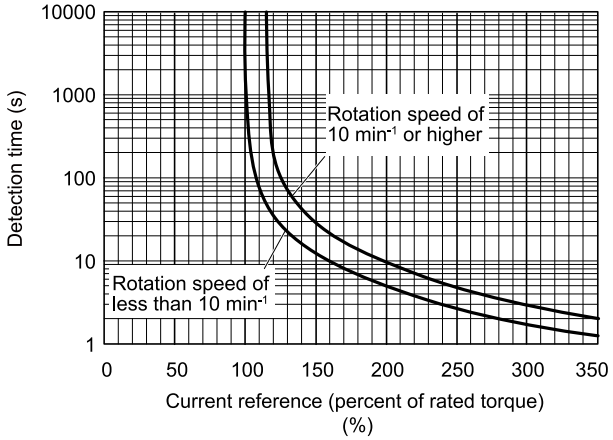
Note:

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the servomotor can be used within the intermittent duty zone.
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

For the overload detection level, priority is given to the lower of the detection levels in the overload protection characteristics of the connected SERVOPACK and servomotor.



Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the servomotor so that the effective torque remains within the continuous duty zone given in "*Torque-Rotation Speed Characteristics on page 58*".

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the servomotors are given in "*Servomotor Ratings on page 55*". The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the servomotor. Use the SigmaSize+ AC servo capacity selection program *1 to check the driving conditions. Perform the required steps for each of the following cases.

*1 Contact your Yaskawa representative for information on this program.

■ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320).

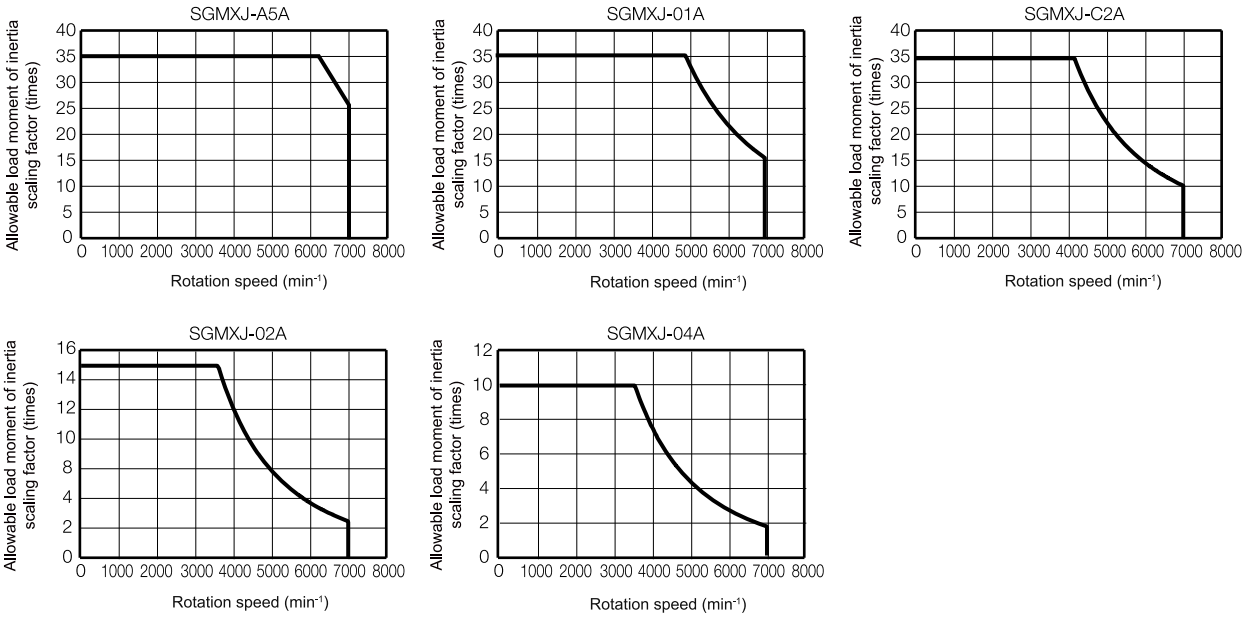
Refer to the following section for the regenerative power (W) that can be processed by the SERVOPACKs.

☞ *Specifications of Built-in Regenerative Resistors in SERVOPACKs on page 573*

Install an external regenerative resistor when the built-in regenerative resistor cannot process all of the regenerative power.

■ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the rotation speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, for the shaded areas of the graphs, use Yaskawa's SigmaSize+, an AC servo drive capacity selection program, to select an external regenerative resistor.



Note:

Applicable SERVOPACK Model: SGDXS-R70A, -90A, -1R6A, -2R8A

■ When an External Regenerative Resistor Is Required

Install the external regenerative resistor which is selected with the SigmaSize+. Contact your Yaskawa representative for information on SigmaSize+.

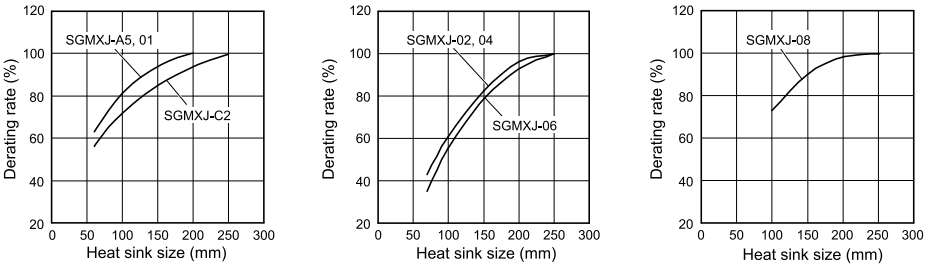
Refer to the following section for details on the external regenerative resistors.

☞ *Specifications and Dimensions of External Regenerative Resistors on page 574*

Derating Rates

■ Servomotor Heat Dissipation Conditions

The servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the servomotor. If the servomotor is mounted on a small device component, the servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.



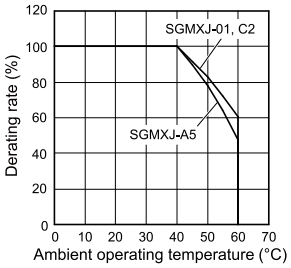
Important

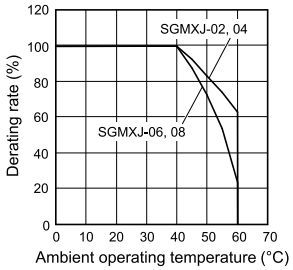
The actual temperature rise depends on the following conditions. Always check the servomotor temperature with the actual equipment.

- How the heat sink (the servomotor mounting section) is attached to the installation surface
- Status between heat sink and servomotor (sealant, reduction gear, etc.)
- What material is used for the servomotor mounting section
- Servomotor rotation speed

■ Applications Where the Surrounding Air Temperature Exceeds 40°C

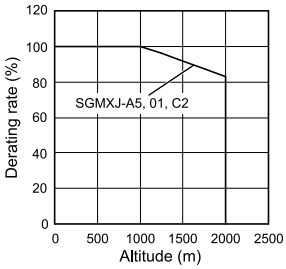
The servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.

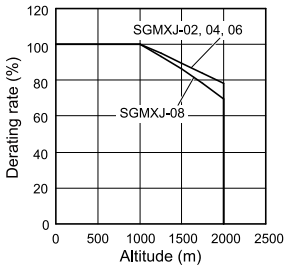




■ Applications Where the Altitude Exceeds 1000 m

The servomotor ratings are the continuous allowable values at an altitude of 1000 m or less. If you use a servomotor at an altitude that exceeds 1000 m (2000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.





Note:

- When using servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in "*Servomotor Overload Protection Characteristics on page 59*".
- Use the combination of the SERVOPACK and servomotor so that the derating conditions are satisfied for both the SERVOPACK and servomotor.
- The derating rates are applicable only when the average rotation speed is less than or equal to the rated rotation speed. If the average rotation speed exceeds the rated rotation speed, consult with your Yaskawa representative.

Specifications and Ratings

Specification

Voltage	200 V										
Model SGMXA-	A5A	01A	C2A, 02A	04A	06A, 08A	10A	15A	20A	25A, 30A	40A, 50A	70A
Time Rating	Continuous										
Thermal Class	UL: B, CE: B						UL: F, CE: F				
Insulation Resistance	500 VDC, 10 MΩ min.										
Withstand Voltage	1500 VAC for 1 minute										
Excitation	Permanent magnet										
Mounting	Flange-mounted										
Drive Method	Direct drive										
Rotation Direction	Counterclockwise (CCW) for forward reference when viewed from the load side										
Vibration Class *1	V15										

Continued on next page.

Continued from previous page.

Voltage		200 V										
Model SGMXA-		A5A	01A	C2A, 02A	04A	06A, 08A	10A	15A	20A	25A, 30A	40A, 50A	70A
Environmental Conditions	Surrounding Air Temperature	0°C to 40°C (With derating, usage is possible between 40°C and 60°C.) *3										
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)										
	Installation Site	• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1000 m or less. (With derating, usage is possible between 1000 m and 2000 m.) *3 • Must be free of strong magnetic fields.										
	Storage Environment	Store the servomotor in the following environment if you store it with the power cable disconnected. Storage temperature: -20°C to +60°C (with no freezing) Storage humidity: 20% to 80% relative humidity (with no condensation)										
Impact Resistance *2	Impact Acceleration (at Flange)	490 m/s²										
	Number of Impacts	2 times										
Vibration Resistance *2	Vibration Acceleration (at Flange)	49 m/s²						49 m/s² (24.5 m/s² front to back)				14.7 m/s²

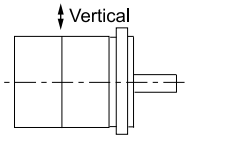
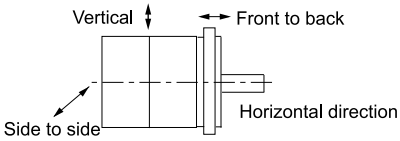
	SGDXT-	1R6A *4, 2R8A *4	1R6A *4, 2R8A *4	1R6A, 2R8A *4	2R8A	–	–	–	–	–	–	–

*1 A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the servomotor without a load at the rated rotation speed.

*2 The given values are for when the servomotor shaft is mounted horizontally and impact or vibration is applied in the directions shown in the following figures. The strength of the vibration that the servomotor can withstand depends on the application. Always check the vibration acceleration that is applied to the servomotor with the actual equipment.



Impact Applied to the Servomotor



Vibration Applied to the Servomotor

*3 Refer to the following section for the derating rates.
☞ *Derating Rates on page 80*

*4 If you use this combination, performance may not be as good, e.g., the control gain may not increase, in comparison with using a Σ-XS SERVOPACK.

	Coil Resistance	Ω (at 20°C)	104.8 ±10%			96 ±10%		88.6 ±10%		
	Rated Current	A (at 20°C)	0.23			0.25		0.27		
	Time Required to Release Brake	ms	60					80		
	Time Required to Brake	ms	100							
Allowable Load Moment of Inertia (Rotor Moment of Inertia Ratio) *6	At 6000 min^{-1}		40 times	40 times	40 times	30 times	20 times	20 times	20 times	20 times
	At 7000 min^{-1}					25 times	15 times	20 times	15 times	20 times
	With External Regenerative Resistor and External Dynamic Brake Resistor *7	At 6000 min^{-1}	40 times	40 times	40 times	30 times	20 times	20 times	20 times	30 times
		At 7000 min^{-1}								
Allowable Shaft Loads *8	LF	mm	20			25		35		
	Allowable Radial Load	N	78			245		392		
	Allowable Thrust Load	N	54			74		147		

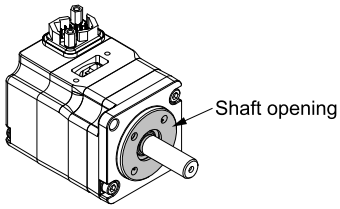
*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

*3 Refer to the following section for the relation between the heat sinks and derating rate.

☞ *Servomotor Heat Dissipation Conditions on page 80*

*4 This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.



*5 Observe the following precautions if you use a servomotor with a holding brake.

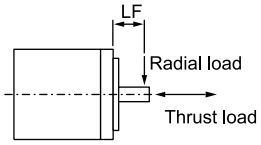
- The holding brake cannot be used to stop the servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*6 The rotor moment of inertia scaling factor is the value for a standard servomotor without a holding brake.

*7 To externally connect a dynamic brake resistor, select hardware option specification 0020 for the SERVOPACK.
However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGDXS-R70A□□A0020 to -2R8A□□A0020
- SGDXW-1R6A□□A0020, -2R8A□□A0020
- SGDXT-1R6A□□A0020, -2R8A□□A0020

*8 Design the mechanical system so that the thrust and radial loads applied to the servomotor shaft end during operation do not exceed the values given in the table.



*9 If the heat sink is 250 mm × 250 mm × 6 mm, the rated output is 550 W and the rated torque is 1.75 N·m. Refer to the following section for details.
☞ *Servomotor Heat Dissipation Conditions on page 80*

	Allowable Radial Load	N	686			980	1176		
	Allowable Thrust Load	N	196			392			

*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.

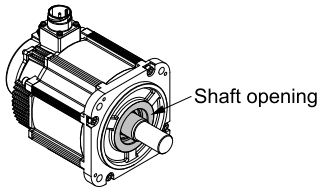
*2 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the table.

*3 For SGMXA-25A and -50A servomotors, the maximum rotation speed in the continuous duty zone is 5000 min^{-1}. Use the servomotor in a range where the average motor speed and effective torque stay in the continuous zone.

*4 The values for SGMXA-15A to -70A servomotors with batteryless absolute encoders (and holding brakes) are the same as those in the table.

*5 Refer to the following section for the relation between the heat sinks and derating rate.
☞ *Servomotor Heat Dissipation Conditions on page 80*

*6 This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.



*7 Observe the following precautions if you use a servomotor with a holding brake.

- The holding brake cannot be used to stop the servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*8 The rotor moment of inertia scaling factor is the value for a standard servomotor without a holding brake.

*9 To externally connect a dynamic brake resistor, select hardware option specification 0020 for the SERVOPACK.
However, you cannot externally connect a dynamic brake resistor if you use the following SERVOPACKs (maximum applicable motor capacity: 400 W).

- SGDXS-R70A□□A0020 to -2R8A□□A0020
- SGDXW-1R6A□□A0020 to -2R8A□□A0020

*10 Design the mechanical system so that the thrust and radial loads applied to the servomotor shaft end during operation do not exceed the values given in the table.

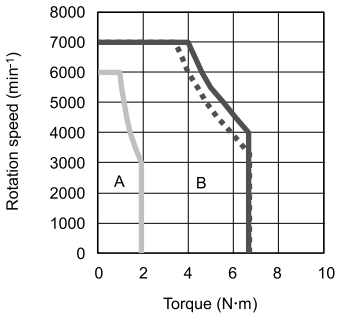
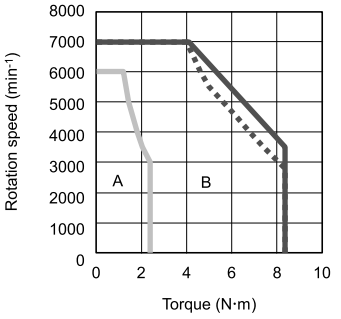
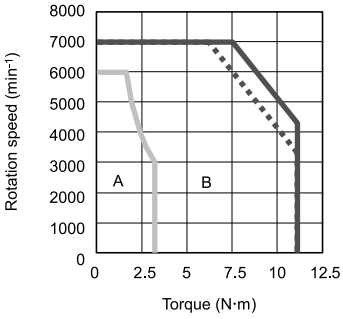
SGMXA-06A



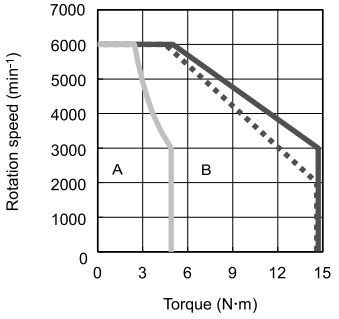
SGMXA-08A



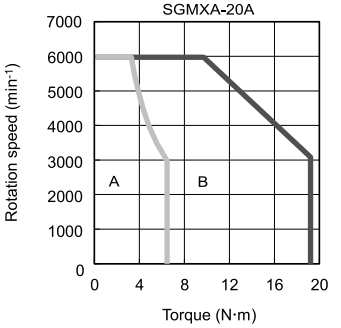
SGMXA-10A



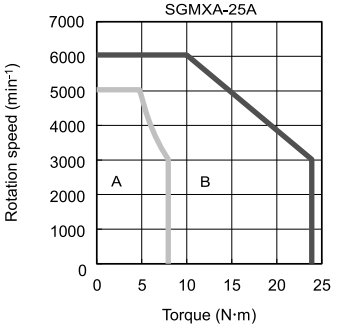
SGMXA-15A



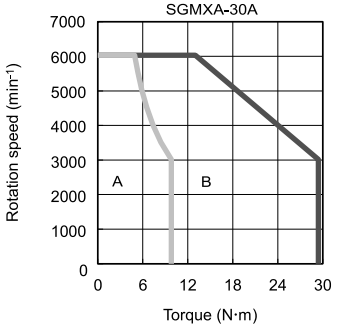
SGMXA-20A

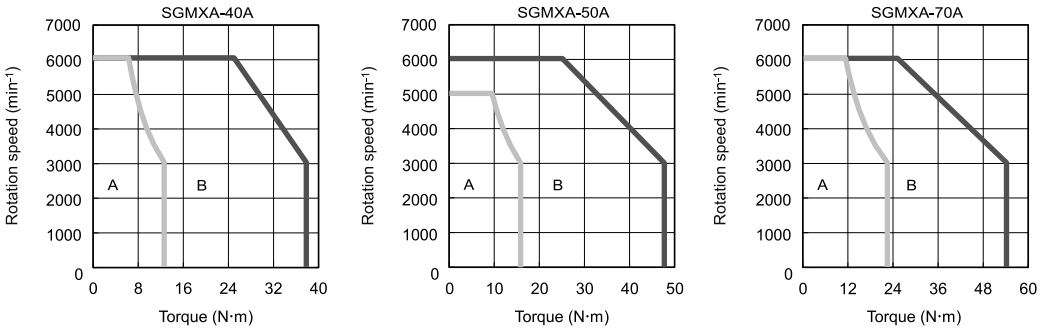


SGMXA-25A



SGMXA-30A





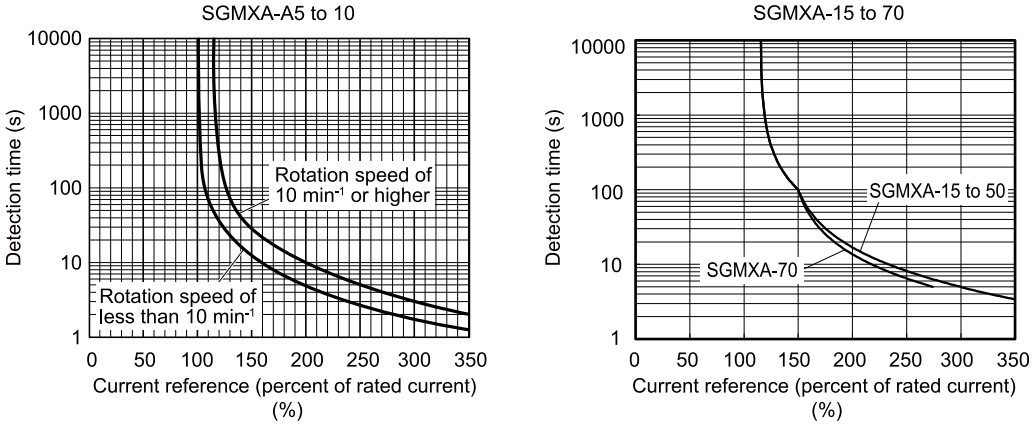
Note:

1. SGMXA-A5A to -10: These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C.
   SGMXA-15A to -70: These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the servomotor can be used within the intermittent duty zone.
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.
5. The SGMXA-10A and -15A can use a single-phase power input in combination with the SGDXS-120A□□A0008.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

For the overload detection level, priority is given to the lower of the detection levels in the overload protection characteristics of the connected SERVOPACK and servomotor.



Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the servomotor so that the effective torque remains within the continuous duty zone given in "*Torque-Rotation Speed Characteristics on page 76*".

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the servomotors are given in "*Servomotor Ratings on page 72*". The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the servomotor. Use the SigmaSize+ AC servo capacity selection program *1 to check the driving conditions. Perform the required steps for each of the following cases.

*1 Contact your Yaskawa representative for information on this program.

■ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information

An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320).

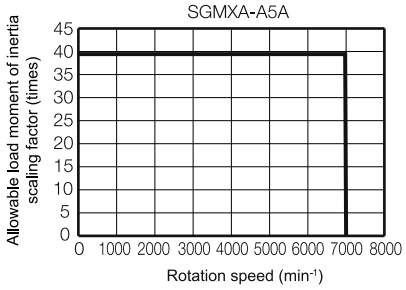
Refer to the following section for the regenerative power (W) that can be processed by the SERVOPACKs.

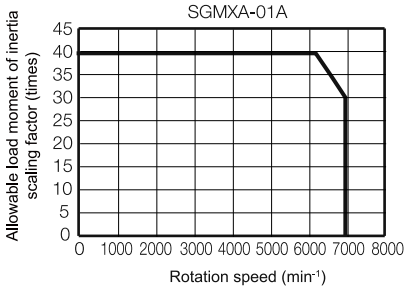
☞ *Specifications of Built-in Regenerative Resistors in SERVOPACKs on page 573*

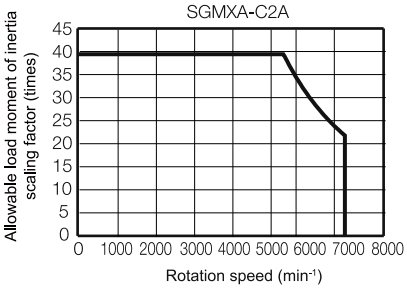
Install an external regenerative resistor when the built-in regenerative resistor cannot process all of the regenerative power.

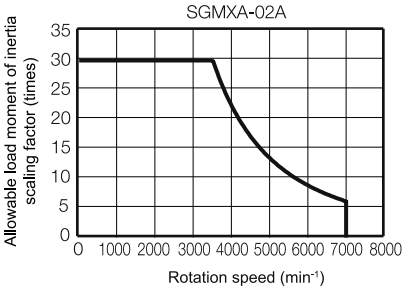
■ SERVOPACKs without Built-in Regenerative Resistors

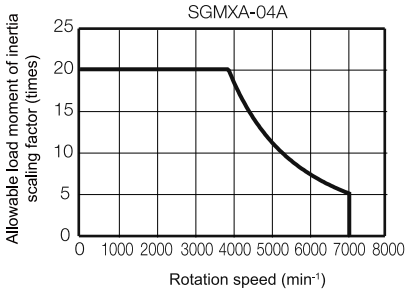
The following graph shows the allowable load moment of inertia scaling factor of the rotation speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, for the shaded areas of the graphs, use Yaskawa's SigmaSize+, an AC servo capacity selection program, to select an external regenerative resistor.











Note:

Applicable SERVOPACK Model: SGDXS-R70A, -90A, -1R6A, -2R8A

■ When an External Regenerative Resistor Is Required

Install the external regenerative resistor which is selected with the SigmaSize+. Contact your Yaskawa representative for information on SigmaSize+.

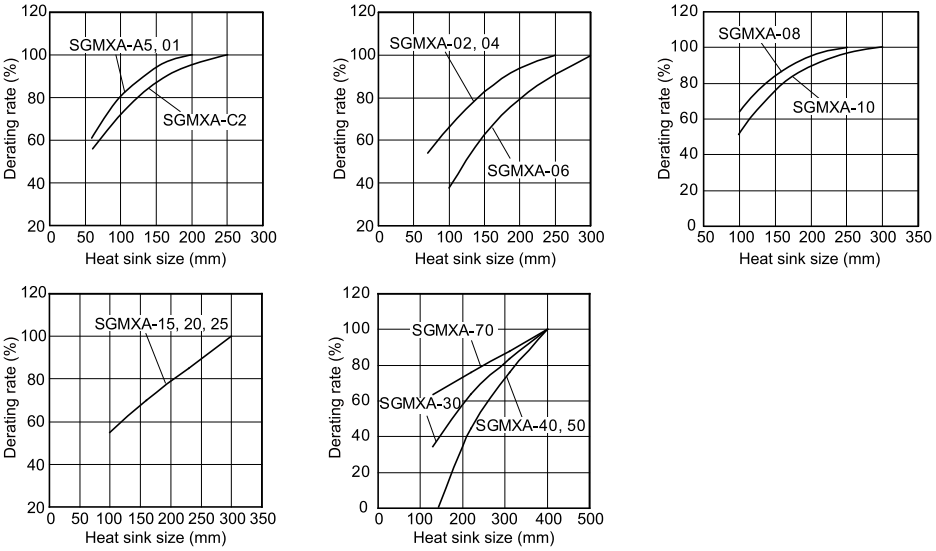
Refer to the following section for details on the external regenerative resistors.

☞ *Specifications and Dimensions of External Regenerative Resistors on page 574*

Derating Rates

■ Servomotor Heat Dissipation Conditions

The servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C when a heat sink is installed on the servomotor. If the servomotor is mounted on a small device component, the servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.



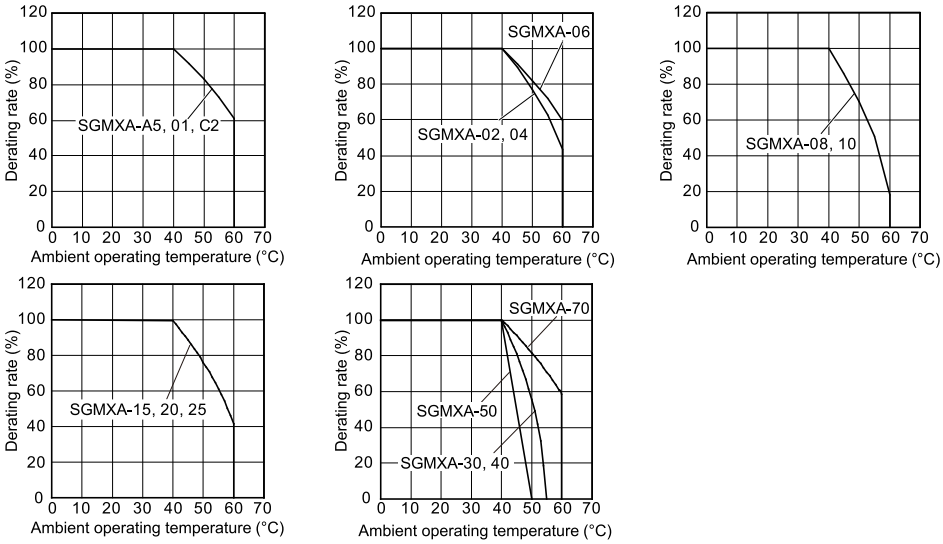
Important

The actual temperature rise depends on the following conditions. Always check the servomotor temperature with the actual equipment.

- How the heat sink (the servomotor mounting section) is attached to the installation surface
- Status between heat sink and servomotor (sealant, reduction gear, etc.)
- What material is used for the servomotor mounting section
- Servomotor rotation speed

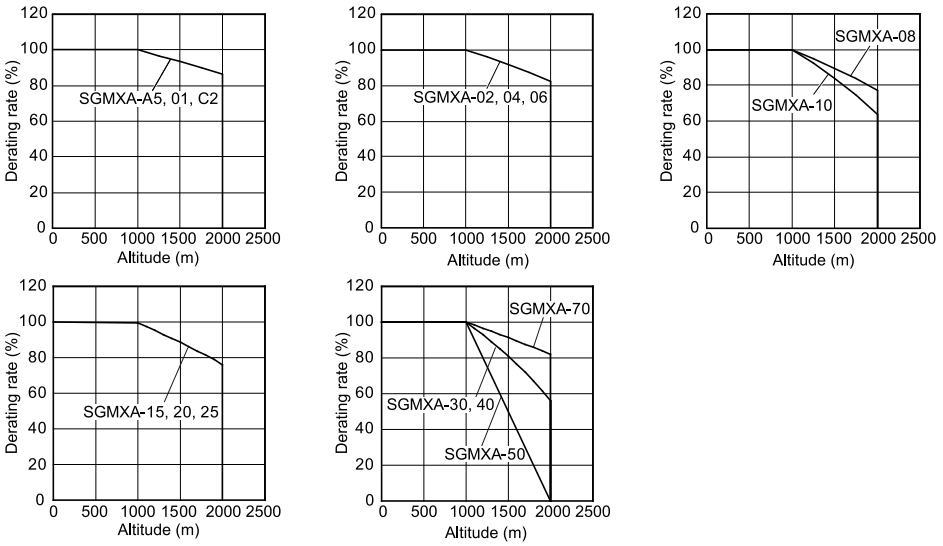
■ Applications Where the Surrounding Air Temperature Exceeds 40°C

The servomotor ratings are the continuous allowable values at a surrounding air temperature of 40°C. If you use a servomotor at a surrounding air temperature that exceeds 40°C (60°C max.), apply a suitable derating rate from the following graphs.



■ Applications Where the Altitude Exceeds 1000 m

The servomotor ratings are the continuous allowable values at an altitude of 1000 m or less. If you use a servomotor at an altitude that exceeds 1000 m (2000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.



Note:

- When using servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in "*Servomotor Overload Protection Characteristics on page 78*".
- Use the combination of the SERVOPACK and servomotor so that the derating conditions are satisfied for both the SERVOPACK and servomotor.
- The derating rates are applicable only when the average rotation speed is less than or equal to the rated rotation speed. If the average rotation speed exceeds the rated rotation speed, consult with your Yaskawa representative.

6th digit: Shaft End

Code	Specification
2	Straight without key (SGMXG-03 to -20 only)
6	Straight with key and tap
8	Straight without key, with tap (SGMXG-30 to -1E only)

7th digit: Options

Code	Specification
1	Without options
C	With holding brake (24 VDC)
E	With oil seal With holding brake (24 VDC)
S	With oil seal

8th digit: Destination

A

9th digit: Ancillary Specification

Code	Specification
1	Standard
2	Σ-7 compatible

Note:

The rated output is 2.4 kW if you combine the SGMXG-30A with the SGDXS-200A.

Specifications and Ratings

Specifications

Voltage	200 V									
Model SGMXG-	03A, 05A	09A	13A	20A	30A	44A	55A	75A	1AA	1EA
Time Rating	Continuous									
Thermal Class	UL: F, CE: F									
Insulation Resistance	500 VDC, 10 MΩ min.									
Withstand Voltage	1,500 VAC for 1 minute									
Excitation	Permanent magnet									
Mounting	Flange-mounted									
Drive Method	Direct drive									
Rotation Direction	Counterclockwise (CCW) for forward reference when viewed from the load side									
Vibration Class *1	V15									

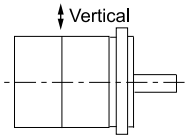
Continued on next page.

Continued from previous page.

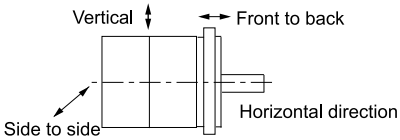
Voltage		200 V									
Model SGMXG-		03A, 05A	09A	13A	20A	30A	44A	55A	75A	1AA	1EA
Environmental Conditions	Surrounding Air Temperature	0°C to 40°C (60°C max.) *3									
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)									
	Installation Site	• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1000 m or less. (With derating, usage is possible between 1000 m and 2000 m.) *3 • Must be free of strong magnetic fields.									
	Storage Environment	Store the servomotor in the following environment if you store it with the power cable disconnected. Storage temperature: -20°C to +60°C (with no freezing) Storage humidity: 20% to 80% relative humidity (with no condensation)									
Impact Resistance *2	Impact Acceleration (at Flange)	490 m/s²									
	Number of Impacts	2 times									
Vibration Resistance *2	Vibration Acceleration (at Flange)	49 m/s² (24.5 m/s² front-to-back)						24.5 m/s²			
Applicable SERVOPACKs *4	SGDXS	3R8A	7R6A (120A) *4	120A (180A) *4	180A (200A) *4	330A (470A) *4	330A (550A) *4	470A (780A) *4	550A	590A	780A
	SGDXW	5R5A *5, 7R6A *5	7R6A	–							

*1 A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the servomotor without a load at the rated rotation speed.

*2 The given values are for when the servomotor shaft is mounted horizontally and impact or vibration is applied in the directions shown in the following figures. The strength of the vibration that the servomotor can withstand depends on the application. Always check the vibration acceleration that is applied to the servomotor with the actual equipment.



Impact Applied to the Servomotor



Vibration Applied to the Servomotor

*3 Refer to the following section for the derating rate.
☞ *Derating Rates on page 126*

*4 To increase instantaneous maximum torque, use the SERVOPACK with the model given in parentheses.
Refer to the following sections for the instantaneous maximum torque of each SERVOPACK.
☞ *Servomotor Ratings (SGMXG-03 to -20) on page 117*
☞ *Servomotor Ratings (SGMXG-30 to -1E) on page 119*
☞ *Torque-Rotation Speed Characteristics on page 122*

*5 If you use a servomotor together with a Σ-XW SERVOPACK, the control gain may not increase as much as with a Σ-XS SERVOPACK and other performances may be lower than those achieved with a Σ-XS SERVOPACK.

Servomotor Ratings (SGMXG-03 to -20)

Voltage		200 V				
Model SGMXG-		03A	05A	09A	13A	20A
Rated Output *1	kW	0.3	0.45	0.85	1.3	1.8
Rated Torque *1, *2	N·m	1.96	2.86	5.39	8.34	11.5
Instantaneous Maximum Torque *1	N·m	5.88	8.92	14.2 20.0 *3	23.3 30.0 *4	28.7 35.4 *5

Continued on next page.

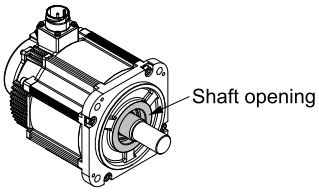
Voltage			200 V				
Model SGMXG-			03A	05A	09A	13A	20A
Rated Current *1		Arms	2.8	3.8	6.9	10.7	16.7
Instantaneous Maximum Current *1		Arms	8.0	11	17 28 *3	28 40 *4	42 56 *5
Rated Rotation Speed *1		min^{-1}	1500				
Continuous Allowable Rotation Speed		min^{-1}	4000				3000
Maximum Rotation Speed *1		min^{-1}	4000				
Torque Constant *1		N·m/Arms	0.776	0.854	0.859	0.891	0.748
Rotor Moment of Inertia *6	Without Holding Brakes	$\times 10^{-4}$ kg·m^2	2.48	3.33	13.9	19.9	26.0
	With Holding Brakes		2.73	3.58	16.0	22.0	28.1
Rated Power Rate *1	Without Holding Brakes	kW/s	15.5	24.6	20.9	35.0	50.9
	With Holding Brakes		14.1	22.9	18.2	31.6	47.1
Rated Angular Acceleration *1	Without Holding Brakes	rad/s^2	7900	8590	3880	4190	4420
	With Holding Brakes		7180	7990	3370	3790	4090
Heat Sink Size *7		mm	250 ×250 × 6 (aluminum)		400 × 400 × 20 (steel)		
Protective Structure *8			Totally enclosed, self-cooled, IP67				
Holding Brake Specifications *9	Rated Voltage	V	24 $VDC^{+10\%}_{0}$				
	Capacity	W	10				
	Holding Torque	N·m	4.5		12.7	19.6	
	Coil Resistance	Ω (at 20°C)	56		59		
	Rated Current	A (at 20°C)	0.43		0.41		
	Time Required to Release Brake	ms	100				
	Time Required to Brake	ms	80				
Allowable Load Moment of Inertia (Rotor Moment of Inertia Ratio) *10	At 3000 min^{-1}		15 times		5 times		
	At 4000 min^{-1}		8.4 times		2 times		5 times
	With External Regenerative Resistor and External Dynamic Brake Resistor *11	At 3000 min^{-1}	15 times		10 times		
		At 4000 min^{-1}	8.4 times		8 times	9 times	7 times
Allowable Shaft Loads *12	LF	mm	40		58		
	Allowable Radial Load	N	490			686	980
	Allowable Thrust Load	N	98			343	392

*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
*2 The rated torques are the continuous allowable torque values with an aluminum or steel heat sink of the dimensions given in the table.
*3 This is the value if you combine with the SERVOPACK SGDXS-120A.
*4 This is the value if you combine with the SERVOPACK SGDXS-180A.
*5 This is the value if you combine with the SERVOPACK SGDXS-200A.
*6 The values for the servomotors with batteryless absolute encoders (and holding brakes) are the same as those in the table.
*7 Refer to the following section for the relation between the heat sinks and derating rate.
☞ *Servomotor Heat Dissipation Conditions on page 126*

*8 This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.



*9 Observe the following precautions if you use a servomotor with a holding brake.

- The holding brake cannot be used to stop the servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*10 The rotor moment of inertia scaling factor is the value for a standard servomotor without a holding brake.
*11 To externally connect a dynamic brake resistor, select hardware option specification 0020 for the SERVOPACK.
*12 Design the mechanical system so that the thrust and radial loads applied to the servomotor shaft end during operation do not exceed the values given in the table.

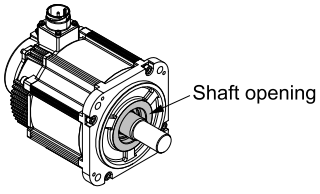
Allowable Shaft Loads *13	LF	mm	79			113		116	
	Allowable Radial Load	N	1470			1764			4998
	Allowable Thrust Load	N	490			588			2156

*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
*2 The rated torques are the continuous allowable torque values with an aluminum or steel heat sink of the dimensions given in the table.
*3 This is the value if you combine with the SERVOPACK SGDXS-200A.
The output of the servomotor will be limited by the rated current and maximum current of the SERVOPACK that is used. The load ratio is calculated based on the servomotor's rated current of 24.5 Arms. Use the servomotor with a load ratio of 80% or less.
*4 This is the value if you combine with the SERVOPACK SGDXS-470A.
*5 This is the value if you combine with the SERVOPACK SGDXS-550A.
*6 This is the value if you combine with the SERVOPACK SGDXS-780A.
*7 The values for the servomotors with batteryless absolute encoders (and holding brakes) are the same as those in the table.
*8 Refer to the following section for the relation between the heat sinks and derating rate.
☞ *Servomotor Heat Dissipation Conditions on page 126*
*9 This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

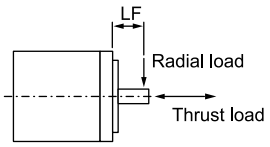


*10 Observe the following precautions if you use a servomotor with a holding brake.

- The holding brake cannot be used to stop the servomotor.
- The time required to release the brake and the time required to brake depend on which discharge circuit is used. Confirm that the operation delay time is appropriate for the actual equipment.
- The 24-VDC power supply is not provided by Yaskawa.

*11 The rotor moment of inertia scaling factor is the value for a standard servomotor without a holding brake.
*12 To externally connect a dynamic brake resistor, select hardware option specification 0020 for the SERVOPACK.

*13 Design the mechanical system so that the thrust and radial loads applied to the servomotor shaft end during operation do not exceed the values given in the table.



Torque-Rotation Speed Characteristics

A : Continuous duty zone ——— (solid lines): Three-phase, 200 V
B : Intermittent duty zone ····· (dotted lines): Single-phase, 200 V

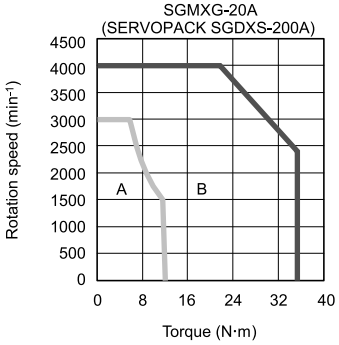
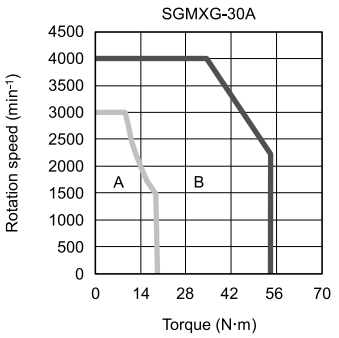
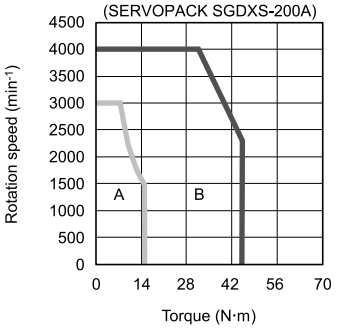
(SERVOPACK SGDXS-200A)



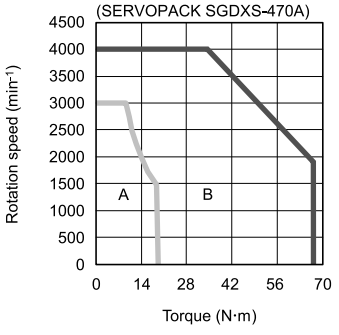
SGMXG-30A

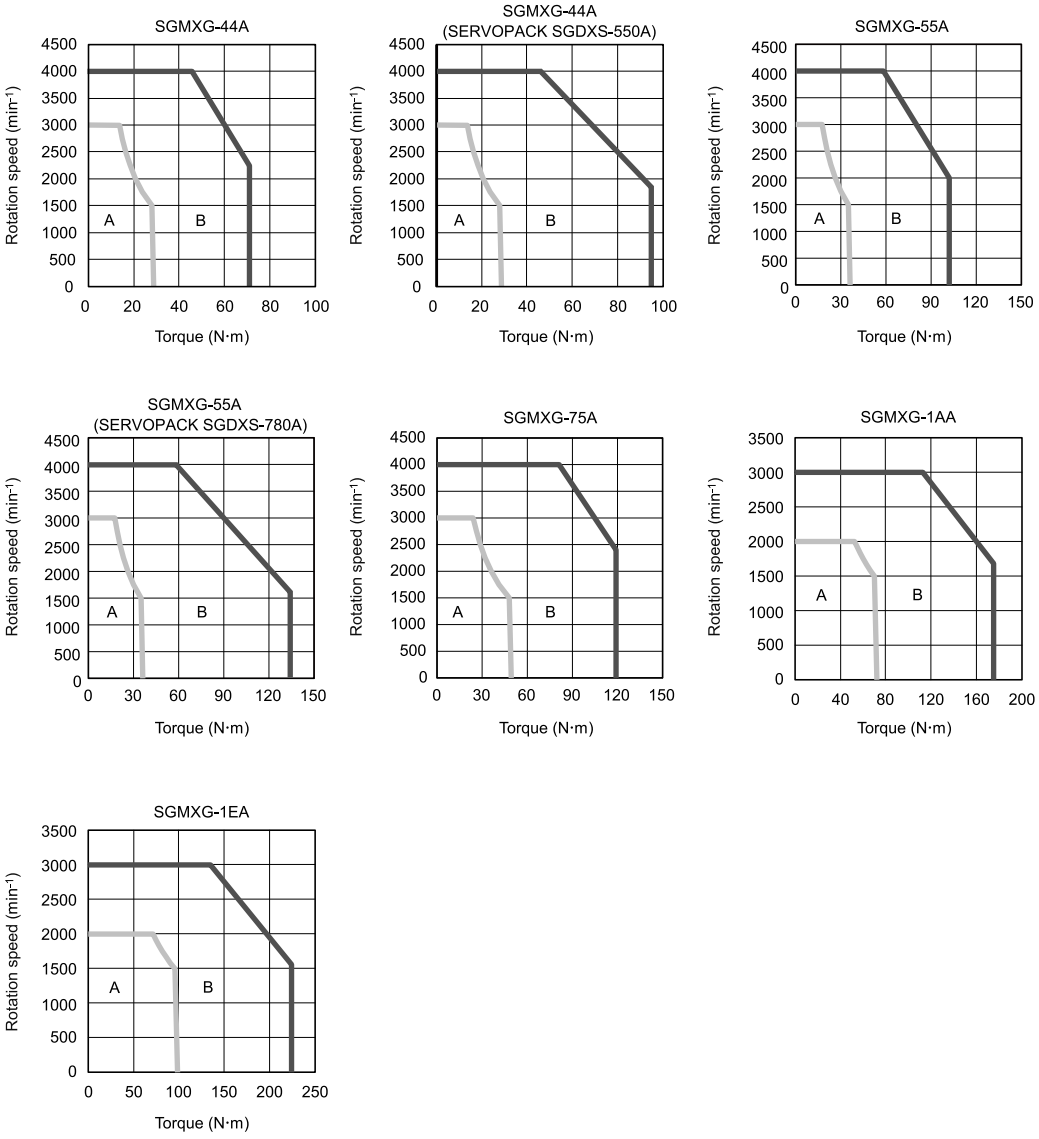


SGMXG-30A
(SERVOPACK SGDXS-200A)



SGMXG-30A
(SERVOPACK SGDXS-470A)





Note:

- These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.
- The characteristics in the intermittent duty zone depend on the power supply voltage.
- If the effective torque is within the allowable range for the rated torque, the servomotor can be used within the intermittent duty zone.
- If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.
- The SGMXG-09A and -13A can use a single-phase power input in combination with the SGDXS-120A□□A0008.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

For the overload detection level, priority is given to the lower of the detection levels in the overload protection characteristics of the connected SERVOPACK and servomotor.

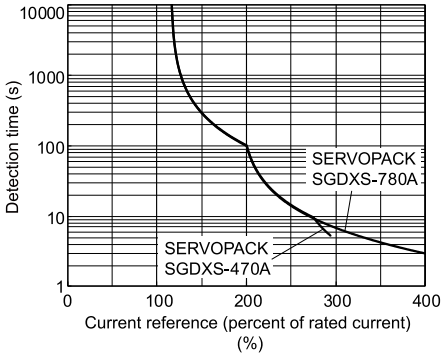
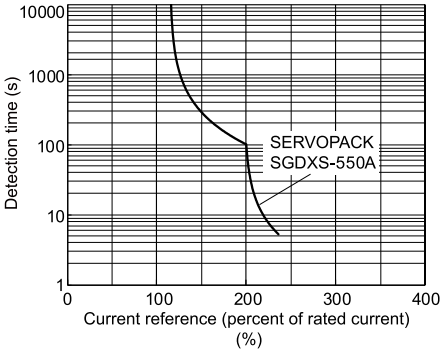
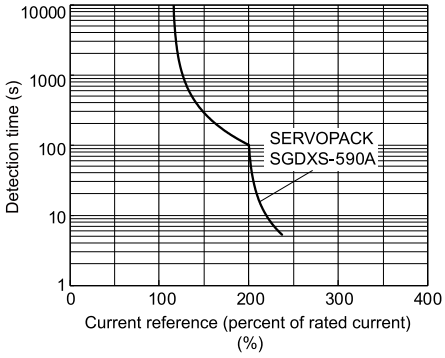
SGMXG-55



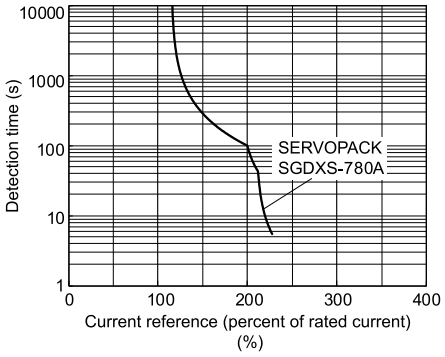
SGMXG-75



SGMXG-1A



SGMXG-1E



*1 The current reference is calculated based on the servomotor's rated current of 24.5 Arms.

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the servomotor so that the effective torque remains within the continuous duty zone given in "*Torque-Rotation Speed Characteristics on page 122*".
- The value for the instantaneous maximum current / rated current (%) for each servomotor is taken as the current reference maximum value.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the servomotors are given in "*Servomotor Ratings (SGMXG-30 to -1E) on page 119*" and "*Servomotor Ratings (SGMXG-30 to -1E) on page 119*". The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the servomotor. Use the SigmaSize+ AC servo capacity selection program *1 to check the driving conditions. Perform the required steps for each of the following cases.

*1 Contact your Yaskawa representative for information on this program.

■ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320).

Refer to the following section for the regenerative power (W) that can be processed by the SERVOPACKs.

☞ *Specifications of Built-in Regenerative Resistors in SERVOPACKs on page 573*

Install an external regenerative resistor when the built-in regenerative resistor cannot process all of the regenerative power.

■ When an External Regenerative Resistor Is Required

Install the external regenerative resistor which is selected with the SigmaSize+. Contact your Yaskawa representative for information on SigmaSize+.

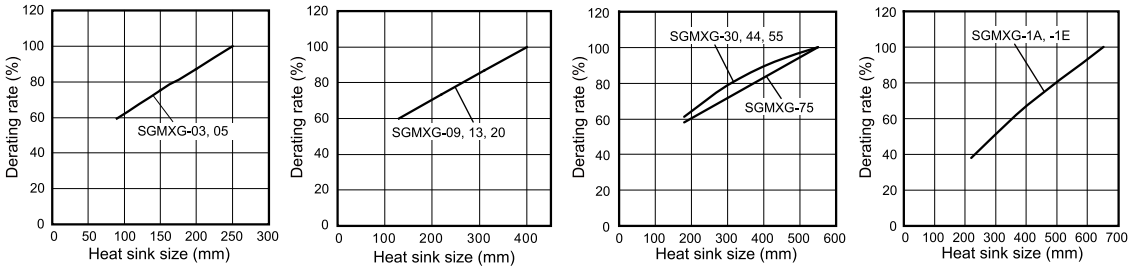
Refer to the following section for details on the external regenerative resistors.

☞ *Specifications and Dimensions of External Regenerative Resistors on page 574*

Derating Rates

■ Servomotor Heat Dissipation Conditions

The servomotor ratings are the continuous allowable values when a heat sink is installed on the servomotor. If the servomotor is mounted on a small device component, the servomotor temperature may rise considerably because the surface for heat dissipation becomes smaller. Refer to the following graphs for the relation between the heat sink size and derating rate.



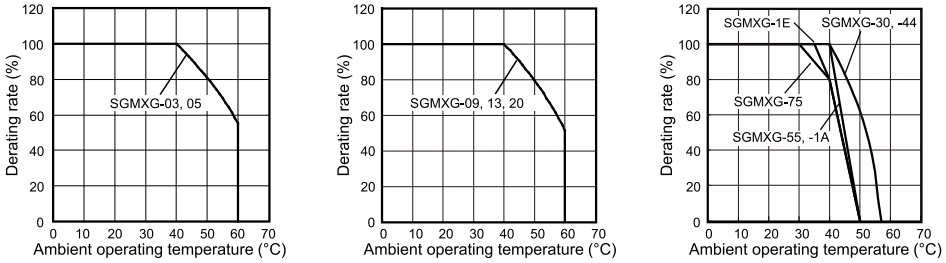
Important

The actual temperature rise depends on the following conditions. Always check the servomotor temperature with the actual equipment.

- How the heat sink (the servomotor mounting section) is attached to the installation surface
- Status between heat sink and servomotor (sealant, reduction gear, etc.)
- What material is used for the servomotor mounting section
- Servomotor rotation speed

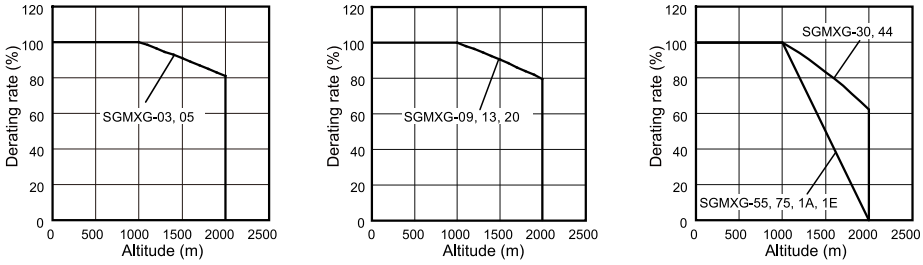
■ Servomotor Derating Rates for Surrounding Air Temperature

Apply a suitable derating rate from the following graphs according to the surrounding air temperature of the servomotor (60° C max.).



■ Applications Where the Altitude Exceeds 1000 m

The servomotor ratings are the continuous allowable values at an altitude of 1000 m or less. If you use a servomotor at an altitude that exceeds 1000 m (2000 m max.), the heat dissipation effect of the air is reduced. Apply the appropriate derating rate from the following graphs.



Note:

- When using servomotors with derating, change the detection timing of overload warning and overload alarm based on the overload detection level of the motor given in "*Servomotor Overload Protection Characteristics on page 123*".
- Use the combination of the SERVOPACK and servomotor so that the derating conditions are satisfied for both the SERVOPACK and servomotor.
- The derating rates are applicable only when the average rotation speed is less than or equal to the rated rotation speed. If the average rotation speed exceeds the rated rotation speed, consult with your Yaskawa representative.

Connections between Servomotors and SERVOPACKs

This chapter describes the cables that are used to connect one servomotor to the SERVOPACK and provides related precautions.

Cables for the SGMXJ Servomotors

Information Refer to the following manual for details on connecting multiple devices to the SERVOPACK.

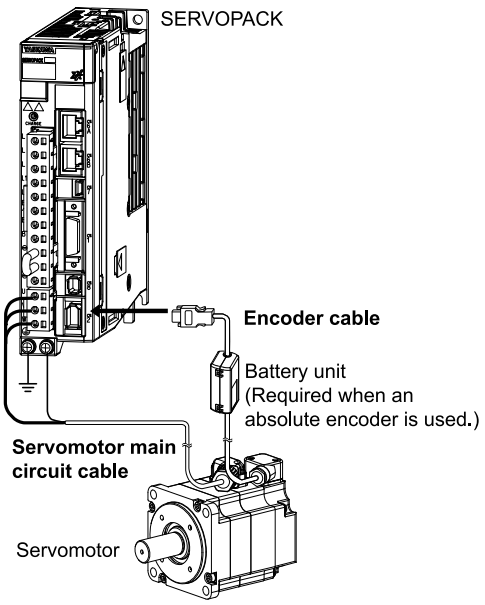
Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

System Configurations

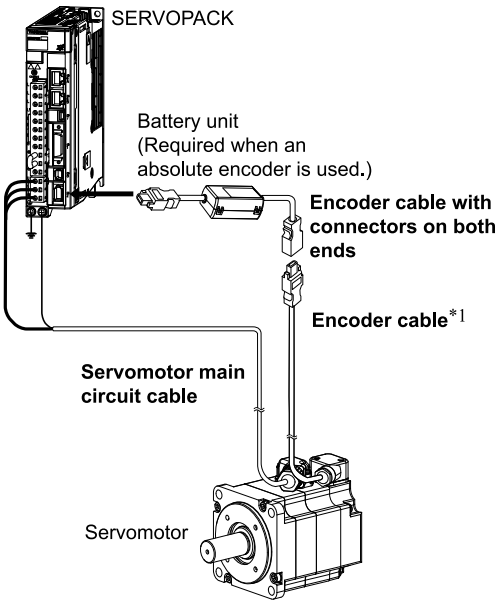
■ Servomotors with Standard Specifications

The cables shown below are required to connect a servomotor to a SERVOPACK.

When Not Relaying the Encoder Cable



When Relaying the Encoder Cable



*1 The JZSP-UCMP00-□□-E and JZSP-CSP12-E cannot be connected at the same time.

Note:

1. The encoder cable to use depends on whether the encoder cable will be relayed.
2. When you will relay the encoder cable, use the following configuration.
   Cables: 2 cables, cable relay point: 1 location, combined cable length: 50 m
3. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.
   Refer to the following section for the intermittent duty zone.

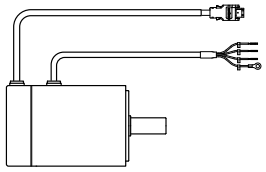
   ☞ *Torque-Rotation Speed Characteristics on page 58*
4. Refer to the following manual for the following information.
   - Cable dimensional drawings and wiring specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

   Σ-X-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

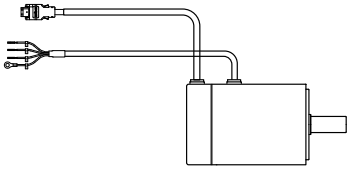
Important

There are different order numbers for the servomotor main circuit cables and encoder cables depending on the cable installation direction. Confirm the order numbers before you order.

Cable Installed toward Load



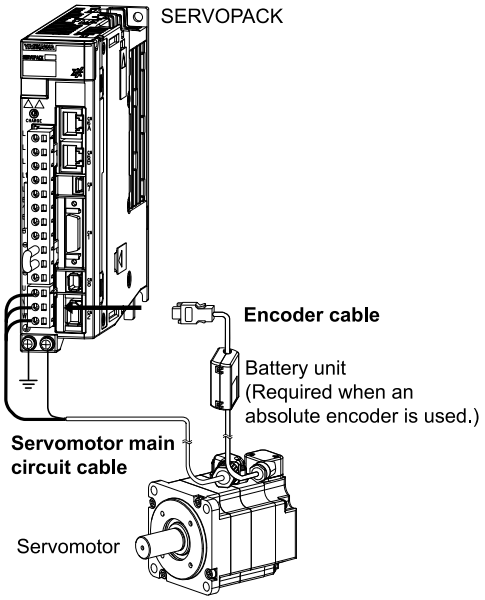
Cable Installed away from Load



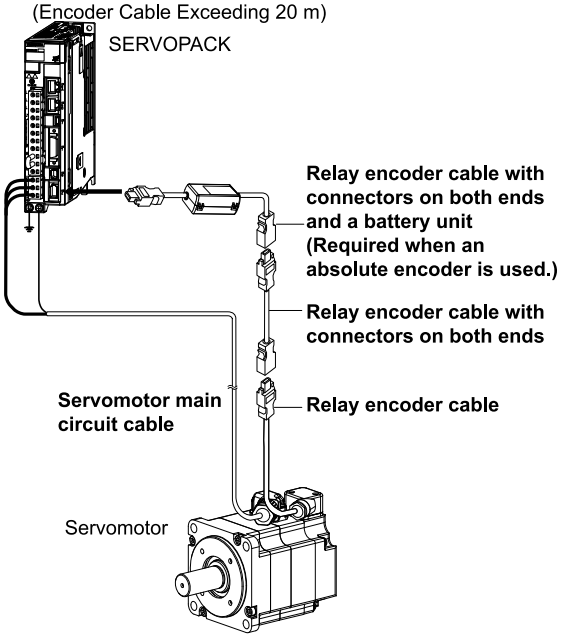
■ Servomotors with Σ-7 Compatible Specifications

The cables shown below are required to connect a servomotor to a SERVOPACK.

When Not Relaying the Encoder Cable
(Encoder Cable Less Than 20 m)



When Relaying the Encoder Cable
(Encoder Cable Exceeding 20 m)



Note:

1. The encoder cable to use depends on whether the encoder cable will be relayed. Be sure to use the relay encoder cable with connectors at both ends in combination with the relay encoder cable as shown in the illustration at the upper right.
2. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.
   Refer to the following section for the intermittent duty zone.
   ☞ *Torque-Rotation Speed Characteristics on page 58*
3. Refer to the following manual for the following information.
   - Cable dimensional drawings and wiring specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

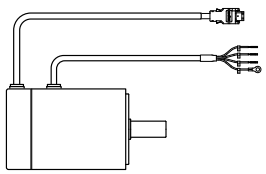
   🕮 Σ-X-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

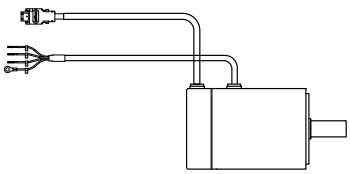
Important

There are different order numbers for the servomotor main circuit cables and encoder cables depending on the cable installation direction. Confirm the order numbers before you order.

Cable Installed toward Load

Cable Installed away from Load





Servomotor Main Circuit Cables

This section provides information on selecting a servomotor main circuit cable. Refer to the following manual for detailed information on cables and for the wiring materials to make your own cables.

Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

■ Servomotors with Standard Specifications

*1 Use flexible cables for moving parts of machines, such as robots.
*2 The recommended bending radius (R) is 46 mm or larger.
*3 The JZSP-UCMP00-□□-E and JZSP-CSP12-E cannot be connected at the same time.
*4 If a battery is connected to the host controller, the battery unit is not required.

■ Servomotors with Σ-7 Compatible Specifications (When Exceeding 20 m)

Name	Length (L)	Order Number	Appearance
Relay encoder cable (for all types of encoders) Cable installed toward load	0.3 m	JZSP-C7PRCD-E	Relay encoder cable (for all types of encoders) Cable installed away from load	0.3 m	JZSP-C7PRCE-E	Relay encoder cable with connectors on both ends (for all types of encoders)	30 m	JZSP-UCMP00-30-E		40 m	JZSP-UCMP00-40-E	
	50 m	JZSP-UCMP00-50-E	
Relay encoder cable with connectors on both ends and battery unit (Required only when an absolute encoder is used. *1)	0.3 m	JZSP-CSP12-E	
*1 This cable is not required if you use a servomotor with a batteryless absolute encoder, and you connect a battery to the host controller.

Cables for the SGMXA Servomotors

Information Refer to the following manual for details on connecting multiple devices to the SERVOPACK.

Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

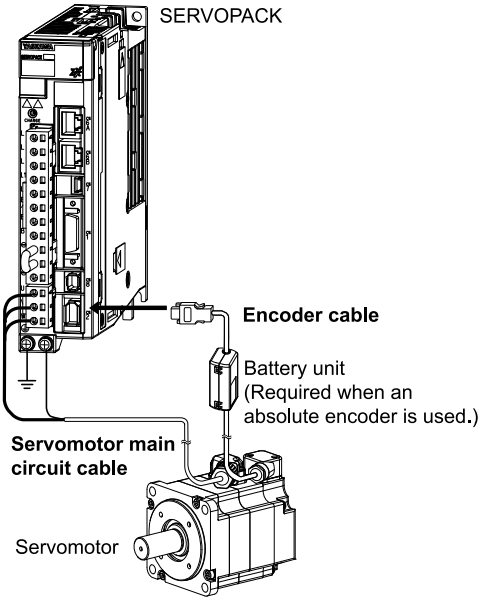
System Configurations

■ Servomotors with Standard Specifications

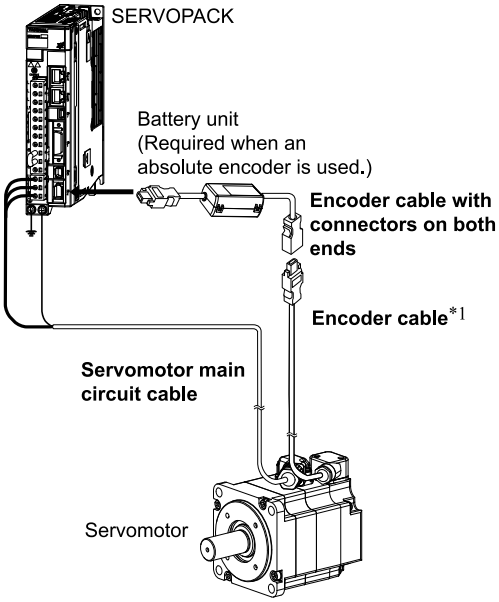
The cables shown below are required to connect a servomotor to a SERVOPACK.

- SGMXA-A5 to -10

When Not Relaying the Encoder Cable

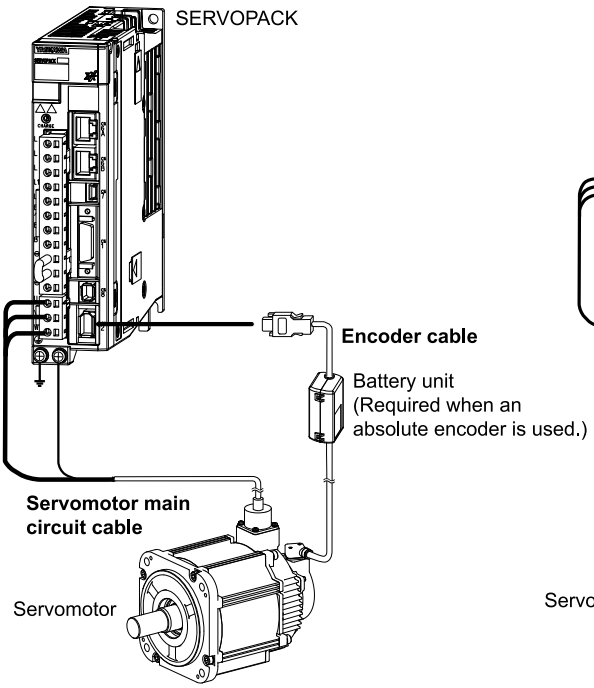


When Relaying the Encoder Cable

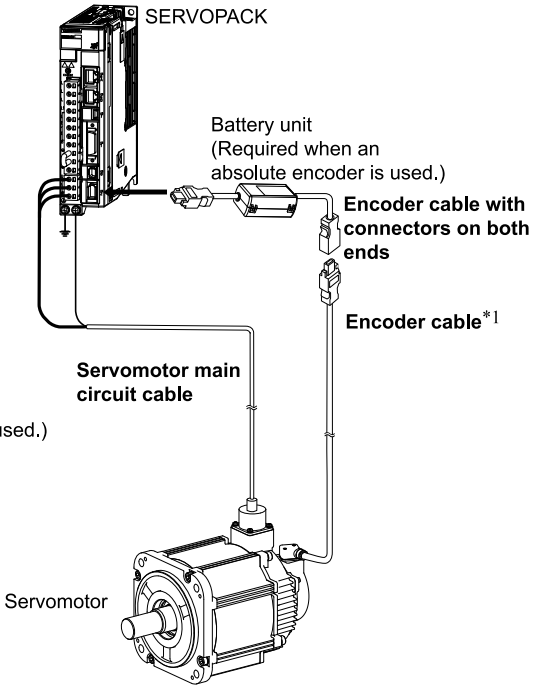


- SGMXA-15 to -70

When Not Relaying the Encoder Cable



When Relaying the Encoder Cable



*1 The JZSP-UCMP00-□□-E and JZSP-CSP12-E cannot be connected at the same time.

Note:

1. The encoder cable to use depends on whether the encoder cable will be relayed.
2. When you will relay the encoder cable, use the following configuration.
   Cables: 2 cables, cable relay point: 1 location, combined cable length: 50 m
3. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.
   Refer to the following section for the intermittent duty zone.
   ☞ *Torque-Rotation Speed Characteristics on page 76*
4. Refer to the following manual for the following information.
   - Cable dimensional drawings and wiring specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

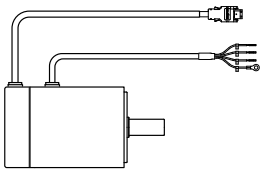
   Σ-X-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

Important

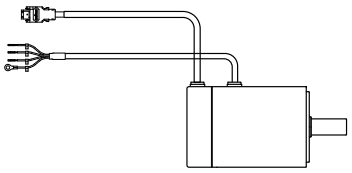
There are different order numbers for the servomotor main circuit cables and encoder cables depending on the cable installation direction. Confirm the order numbers before you order.

- SGMXA-A5 to -10

Cable Installed toward Load

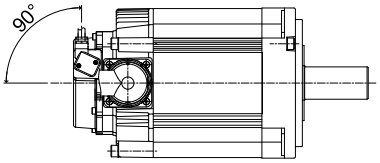


Cable Installed away from Load

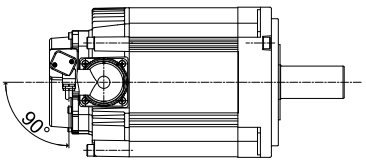


- SGMXA-15 to -70

Cable Installed on Left Side



Cable Installed on Right Side

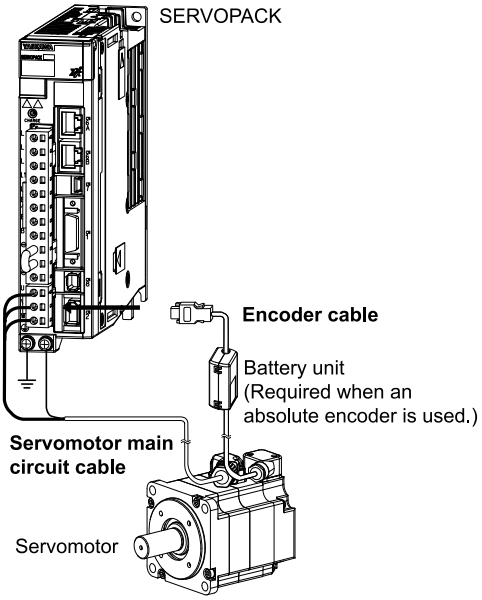


■ Servomotors with Σ-7 Compatible Specifications

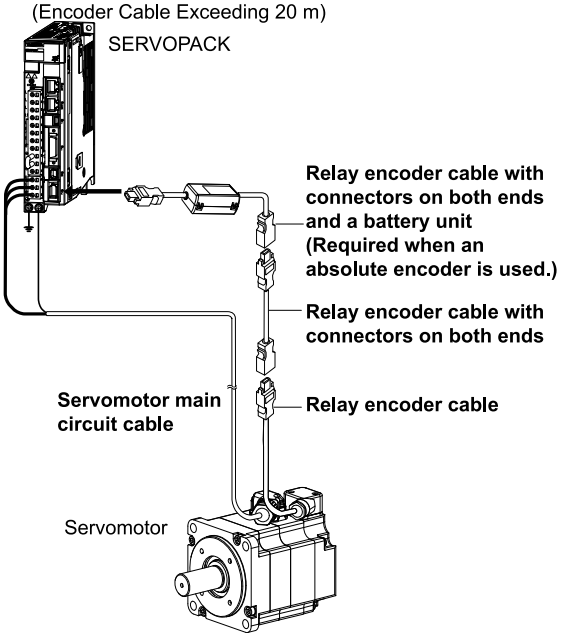
The cables shown below are required to connect a servomotor to a SERVOPACK.

- SGMXA-A5 to -10

When Not Relaying the Encoder Cable
(Encoder Cable Less Than 20 m)

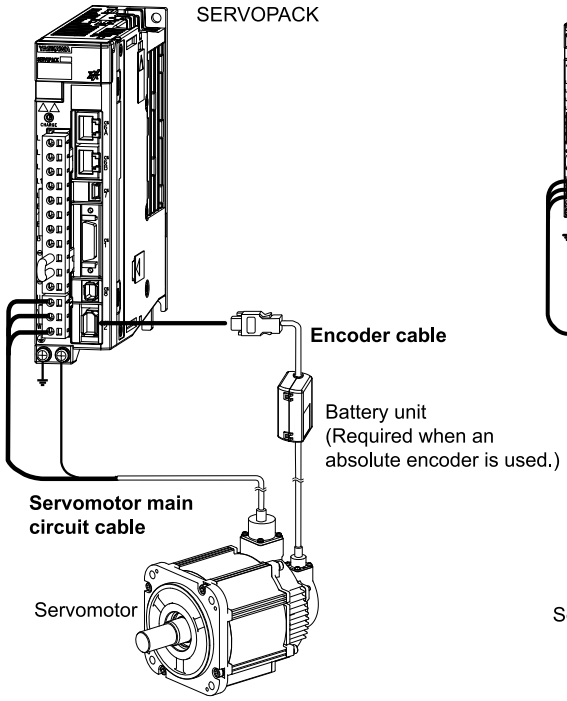


When Relaying the Encoder Cable
(Encoder Cable Exceeding 20 m)

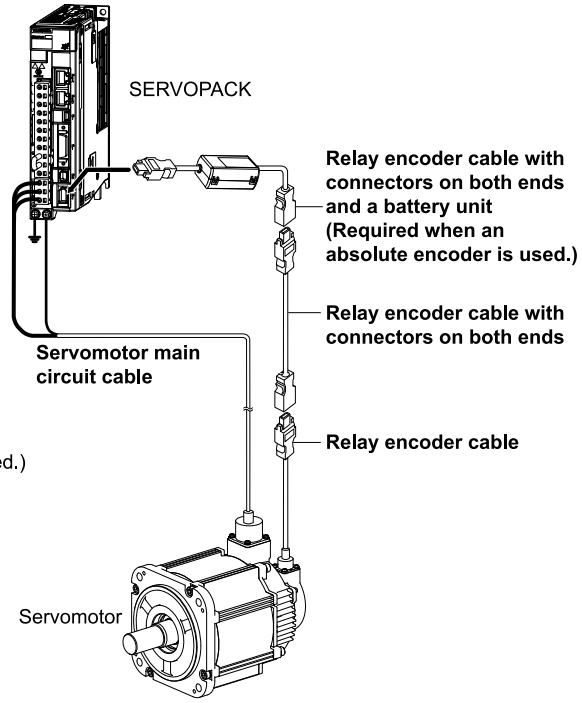


- SGMXA-15 to -70

When Not Relaying the Encoder Cable
(Encoder Cable Less Than 20 m)



When Relaying the Encoder Cable
(Encoder Cable Exceeding 20 m)



Note:

1. The encoder cable to use depends on whether the encoder cable will be relayed.
2. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.
   Refer to the following section for the intermittent duty zone.
   ☞ *Torque-Rotation Speed Characteristics on page 76*
3. Refer to the following manual for the following information.
   - Cable dimensional drawings and wiring specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

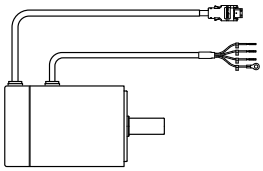
   Σ-X-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

Important

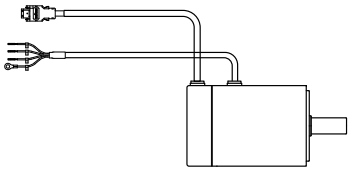
There are different order numbers for the servomotor main circuit cables and encoder cables depending on the cable installation direction. Confirm the order numbers before you order.

- SGMXA-A5 to -10

Cable Installed toward Load



Cable Installed away from Load



- SGMXA-15 to -70

*1 Use flexible cables for moving parts of machines, such as robots.
*2 The recommended bending radius (R) is 90 mm or larger.
*3 The lead installation direction is the non-load side. Contact your Yaskawa representative if you require the leads to be installed in another direction.
*4 This order number is for a set of two cables (main power supply cable and holding brake cable).
When you purchase them separately, the order numbers for main power supply cables are the same as for a servomotor without a holding brake.
The following order numbers are for a holding brake cable. These standard cables are flexible cables.

- Straight Plug: JWSP-XB0FS-□□
- Right-angle Plug: JWSP-XB0FL-□□

Note:

If you need a cable with a length of 20 m to 50 m, consider the operating conditions and specify a suitable length.

Note:

If you need a cable with a length of 20 m to 50 m, consider the operating conditions and specify a suitable length.

◆ SGMXA-70 (7.0 kW)

The SGMXA-70 servomotor has a built-in cooling fan. Yaskawa does not specify the cable to connect to the connector on the built-in cooling fan side. Use appropriate wiring materials for the specifications of the connector on the built-in cooling fan side.

Refer to the following manual for the specifications of the connector on the built-in cooling fan side required for selecting cables.

Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

Name	Connector Specifications	Length (L)	Order Number *1	Appearance
For servomotors without holding brakes	Straight Plug	3 m	JWSP-XM70NFS-03			5 m	JWSP-XM70NFS-05	
		10 m	JWSP-XM70NFS-10	
		15 m	JWSP-XM70NFS-15

	40 m	JZSP-C7M33G-40-E	JZSP-C7M34G-40-E	
	50 m	JZSP-C7M33G-50-E	JZSP-C7M34G-50-E	

*1 Use flexible cables for moving parts of machines, such as robots.
*2 The recommended bending radius (R) is 90 mm or larger.

◆ SGMXA-15 to -70 (1.5 kW to 7.0 kW)

The servomotor main circuit cable for SGMXA-15 to -70 servomotors is same as that for the standard specification servomotor and the Σ-7 compatible specification servomotor.

Information Σ-7 compatible specification servomotors can also use the same cables as Σ-7 series rotary servomotors. Refer to the following manual for information on the Σ-7-series for rotary servomotor cables.

Σ-7-Series Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

Encoder Cables (When Not Relaying the Encoder Cable)

■ Servomotors with Standard Specifications

Name	Length (L)	Order Number		Appearance
		Standard Cable	Flexible Cable *1 *2	
For batteryless absolute encoder SGMXA-A5 to -10: Cable installed toward load SGMXA-15 to -50: Cable installed toward left side *3	3 m	JWSP-XP2IS1-03	JWSP-XP2IF1-03		5 m	JWSP-XP2IS1-05	JWSP-XP2IF1-05

	30 m	JWSP-XP2AS2-30	JWSP-XP2AF2-30	
	40 m	JWSP-XP2AS2-40	JWSP-XP2AF2-40	
	50 m	JWSP-XP2AS2-50	JWSP-XP2AF2-50	

*1 Use flexible cables for moving parts of machines, such as robots.
*2 The recommended bending radius (R) is 46 mm or larger.
*3 An encoder cable installed toward the left side cannot be used for the SGMXA-70 (7.0 kW). Use an encoder cable installed toward the right side.
*4 If a battery is connected to the host controller, the battery unit is not required.

Note:

Do not use these cables as relay cables.

■ Servomotors with Σ-7 Compatible Specifications (20 m or Less)

◆ SGMXA-A5 to -10 (50 W to 1.0 kW)

Name	Length (L)	Order Number		Appearance

	Right-angle Plug *4 *5	3 m	JWSP-XPASL-03	JWSP-XPAFL-03	SERVOPACK end Encoder end 		5 m	JWSP-XPASL-05	JWSP-XPAFL-05	
		10 m	JWSP-XPASL-10	JWSP-XPAFL-10	
		15 m	JWSP-XPASL-15	JWSP-XPAFL-15	
		20 m	JWSP-XPASL-20	JWSP-XPAFL-20	

*1 Use flexible cables for moving parts of machines, such as robots.
*2 The recommended bending radius (R) is 46 mm or larger.
*3 If a battery is connected to the host controller, the battery unit is not required.
*4 The lead installation direction is the non-load side. Contact your Yaskawa representative if you require the leads to be installed in another direction.
*5 An encoder cable with a right-angle plug cannot be used for the SGMXA-70 (7.0 kW). Use an encoder cable with a straight plug.

Encoder Cables (When Relaying the Encoder Cable)

■ Servomotors with Standard Specifications

When you will relay the encoder cable, use the following configuration.

Cables: 2 cables, cable relay point: 1 location, combined cable length: 50 m

Name	Length (L)	Order Number		Appearance
		Standard Cable	Flexible Cable *1 *2	
Encoder cable with connectors on both ends For batteryless absolute encoder *3	0.3 m	JWSP-XP1IS0-00P3	JWSP-XP1IF0-00P3	SERVOPACK end Encoder end 	3 m	JWSP-XP1IS0-03	JWSP-XP1IF0-03	
	5 m	JWSP-XP1IS0-05	JWSP-XP1IF0-05

Encoder Cables SGMXA-A5 to -10: Cable installed toward load SGMXA-15 to -50: Cable installed toward left side *5	0.3 m	JWSP-XP3IS1-00P3	JWSP-XP3IF1-00P3	SERVOPACK end Encoder end 	1 m	JWSP-XP3IS1-01	JWSP-XP3IF1-01	
	3 m	JWSP-XP3IS1-03	JWSP-XP3IF1-03	
	5 m	JWSP-XP3IS1-05	JWSP-XP3IF1-05	
	10 m	JWSP-XP3IS1-10	JWSP-XP3IF1-10	
	15 m	JWSP-XP3IS1-15	JWSP-XP3IF1-15	
	20 m	JWSP-XP3IS1-20	JWSP-XP3IF1-20	
	25 m	JWSP-XP3IS1-25	JWSP-XP3IF1-25	
	30 m	JWSP-XP3IS1-30	JWSP-XP3IF1-30	
	40 m	JWSP-XP3IS1-40	JWSP-XP3IF1-40	
	50 m	JWSP-XP3IS1-50	JWSP-XP3IF1-50	
Encoder Cables SGMXA-A5 to -10: Cable installed away from load SGMXA-15 to -70: Cable installed toward right side	0.3 m	JWSP-XP3IS2-00P3	JWSP-XP3IF2-00P3	SERVOPACK end Encoder end 	1 m	JWSP-XP3IS2-01	JWSP-XP3IF2-01	
	3 m	JWSP-XP3IS2-03	JWSP-XP3IF2-03	
	5 m	JWSP-XP3IS2-05	JWSP-XP3IF2-05	
	10 m	JWSP-XP3IS2-10	JWSP-XP3IF2-10	
	15 m	JWSP-XP3IS2-15	JWSP-XP3IF2-15	
	20 m	JWSP-XP3IS2-20	JWSP-XP3IF2-20	
	25 m	JWSP-XP3IS2-25	JWSP-XP3IF2-25	
	30 m	JWSP-XP3IS2-30	JWSP-XP3IF2-30	
	40 m	JWSP-XP3IS2-40	JWSP-XP3IF2-40	
	50 m	JWSP-XP3IS2-50	JWSP-XP3IF2-50	

*1 Use flexible cables for moving parts of machines, such as robots.
*2 The recommended bending radius (R) is 46 mm or larger.
*3 The JZSP-UCMP00-□□-E and JZSP-CSP12-E cannot be connected at the same time.

*4 If a battery is connected to the host controller, the battery unit is not required.
*5 An encoder cable installed toward the left side cannot be used for the SGMXA-70 (7.0 kW). Use an encoder cable installed toward the right side.

■ Servomotors with Σ-7 Compatible Specifications (When Exceeding 20 m)

◆ SGMXA-A5 to -10 (50 W to 1.0 kW)

Name	Length (L)	Order Number	Appearance
Relay encoder cable (for all types of encoders) Cable installed toward load	0.3 m	JZSP-C7PRCD-E	Relay encoder cable (for all types of encoders) Cable installed away from load	0.3 m	JZSP-C7PRCE-E	Relay encoder cable with connectors on both ends (for all types of encoders)	30 m	JZSP-UCMP00-30-E		40 m	JZSP-UCMP00-40-E	
	50 m	JZSP-UCMP00-50-E	
Relay encoder cables with connectors on both ends and battery unit (Required only when an absolute encoder is used *1.)	0.3 m	JZSP-CSP12-E	
*1 This cable is not required if you use a servomotor with a batteryless absolute encoder, and you connect a battery to the host controller.

◆ SGMXA-15 to -70 (1.5 kW to 7.0 kW)

Name	Length (L)	Order Number	Appearance
Relay encoder cable (for all types of encoders) *1 *2	0.3 m	JZSP-CVP01-E			JZSP-CVP02-E	Relay encoder cable with connectors on both ends (for all types of encoders)	30 m	JZSP-UCMP00-30-E		40 m	JZSP-UCMP00-40-E	
	50 m	JZSP-UCMP00-50-E	
Relay encoder cable with connectors on both ends and battery unit (Required only when an absolute encoder is used. *3)	0.3 m	JZSP-CSP12-E	
*1 The lead installation direction of the right-angle plug connector is the non-load side. Contact your Yaskawa representative if you require the leads to be installed in another direction.
*2 An encoder cable with a right-angle plug cannot be used for the SGMXA-70 (7.0 kW). Use an encoder cable with a straight plug.
*3 This cable is not required if you use a servomotor with a batteryless absolute encoder, and you connect a battery to the host controller.

Cables for the SGMXG Servomotors

Information Refer to the following manual for details on connecting multiple devices to the SERVOPACK.

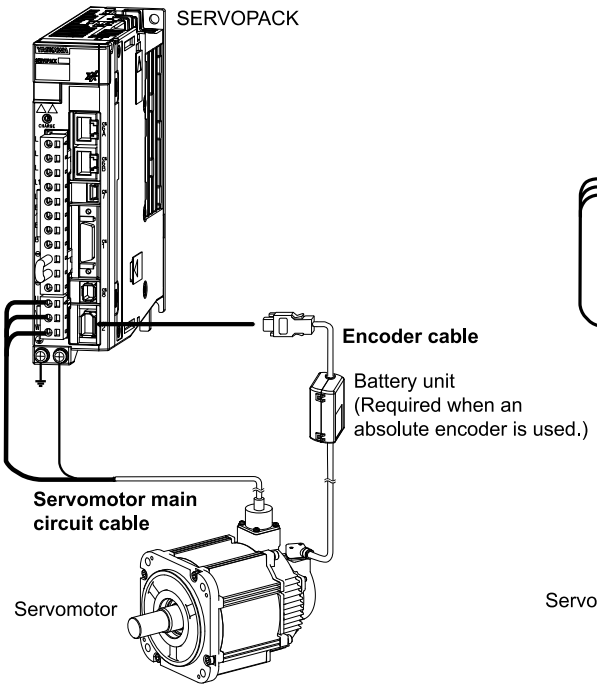
Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

System Configurations

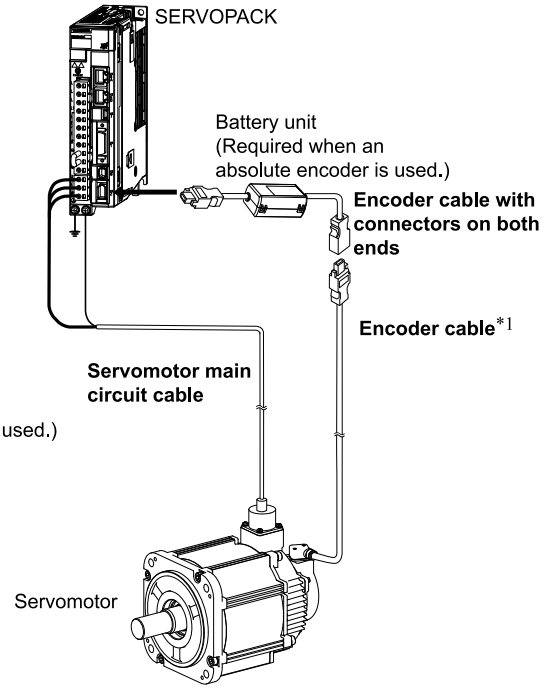
■ Servomotors with Standard Specifications

The cables shown below are required to connect a servomotor to a SERVOPACK.

When Not Relaying the Encoder Cable



When Relaying the Encoder Cable



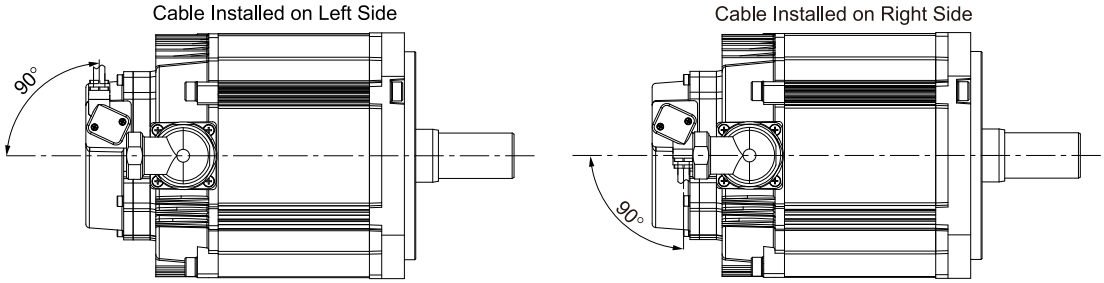
*1 The JZSP-UCMP00-□□-E and JZSP-CSP12-E cannot be connected at the same time.

Note:

1. Cables with connectors on both ends that are compliant with an IP67 protective structure and European Safety Standards are not available from Yaskawa for the SGMXG servomotors. You must make such a cable yourself. Use the connectors specified by Yaskawa for these servomotors. (These connectors are compliant with the standards.) Yaskawa does not specify what wiring materials to use. Use appropriate wiring materials for the current specifications and connectors.
2. The encoder cable to use depends on whether the encoder cable will be relayed.
3. When you will relay the encoder cable, use the following configuration.
   Cables: 2 cables, cable relay point: 1 location, combined cable length: 50 m
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.
   Refer to the following section for the intermittent duty zone.
   ☞ *Torque-Rotation Speed Characteristics on page 122*
5. Refer to the following manual for the following information.
   • Cable dimensional drawings and wiring specifications
   • Order numbers and specifications of individual connectors for cables
   • Order numbers and specifications for wiring materials
   Σ-X-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

Important

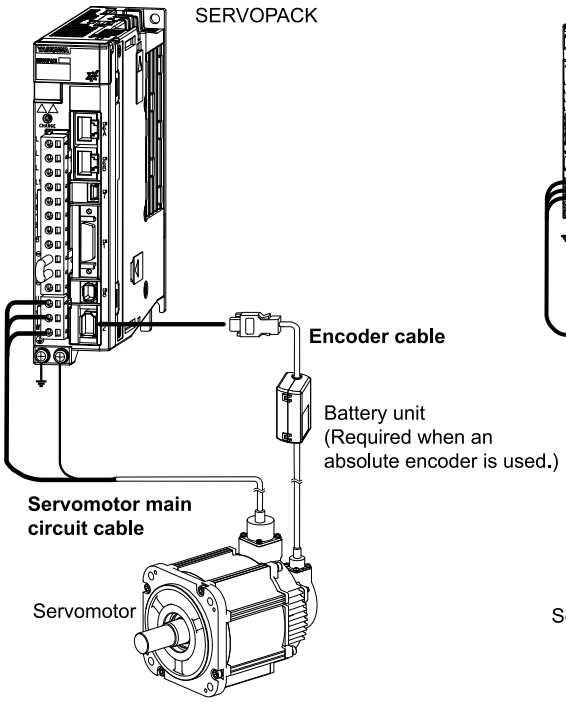
There are different order numbers for the encoder cables depending on the cable installation direction. Confirm the order numbers before you order.



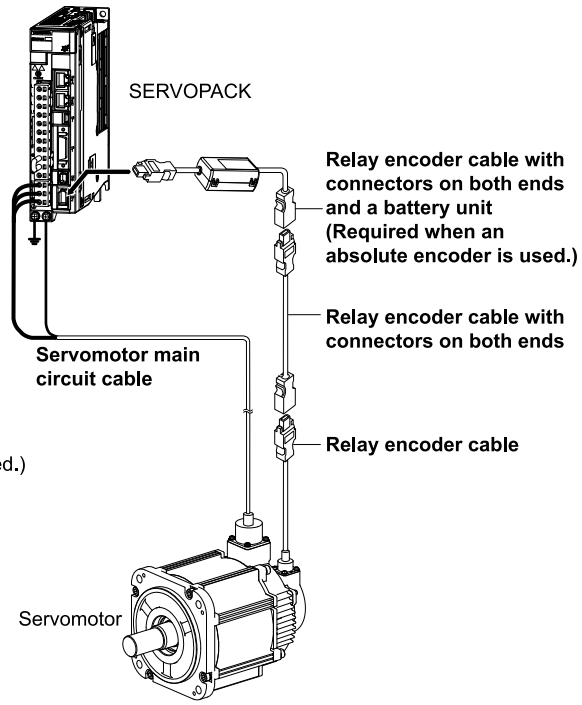
■ Servomotors with Σ-7 Compatible Specifications

The cables shown below are required to connect a servomotor to a SERVOPACK.

When Not Relaying the Encoder Cable
(Encoder Cable Less Than 20 m)



When Relaying the Encoder Cable
(Encoder Cable Exceeding 20 m)



Note:

1. Cables with connectors on both ends that are compliant with an IP67 protective structure and European Safety Standards are not available from Yaskawa for the SGMXG servomotors. You must make such a cable yourself. Use the connectors specified by Yaskawa for these servomotors. (These connectors are compliant with the standards.) Yaskawa does not specify what wiring materials to use. Use appropriate wiring materials for the current specifications and connectors.
2. The encoder cable to use depends on whether the encoder cable will be relayed.
3. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-rotation speed characteristics will become smaller because the voltage drop increases.
   Refer to the following section for the intermittent duty zone.

   ☞ *Torque-Rotation Speed Characteristics on page 122*
4. Refer to the following manual for the following information.
   - Cable dimensional drawings and wiring specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

   Σ-X-Series AC Servo Drive Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

Servomotor Main Circuit Cables

The servomotor main circuit cable is the same for both standard specification servomotors and Σ-7 compatible specification servomotors.

Information For Σ-7 compatible specification servomotors, you can also use the same cables as for Σ-7 series rotary servomotors. Refer to the following manual for details on the cables for Σ-7 series rotary servomotors.

Σ-7-Series Peripheral Device Selection Manual (Manual No.: SIEP S800001 32)

This section provides information on selecting a servomotor main circuit cable. Refer to the following manual for detailed information on cables and for the wiring materials to make your own cables.

Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

■ SGMXG-03, -05 (300 W, 450 W)

Name	Length (L)	Order Number *1	Appearance
For servomotors without holding brakes	3 m	JZSP-CVM21-03-E		5 m	JZSP-CVM21-05-E	
	10 m	JZSP-CVM21-10-E	
	15 m	JZSP-CVM21-15-E	
	20 m	JZSP-CVM21-20-E	
	30 m	JZSP-CVM21-30-E	
	40 m	JZSP-CVM21-40-E	
	50 m	JZSP-CVM21-50-E	
For servomotors with holding brakes	3 m	JZSP-CVM41-03-E		5 m	JZSP-CVM41-05-E	
	10 m	JZSP-CVM41-10-E	
	15 m	JZSP-CVM41-15-E	
	20 m	JZSP-CVM41-20-E	
	30 m	JZSP-CVM41-30-E	
	40 m	JZSP-CVM41-40-E	
	50 m	JZSP-CVM41-50-E	

*1 These standard cables are flexible cables. The recommended bending radius (R) is 90 mm or larger.

■ SGMXG-09, -13 (850 W,1.3 kW)

Name	Connector Specifications	Length (L)	Order Number		Appearance
			Standard Cable	Flexible Cable *1 *2	
For servomotors without holding brakes	Straight Plug	3 m	JWSP-XM15NSS-03	JWSP-XM15NFS-03			5 m	JWSP-XM15NSS-05	JWSP-XM15NFS-05	
		10 m	JWSP-XM15NSS-10	JWSP-XM15NFS-10	
		15 m	JWSP-XM15NSS-15	JWSP-XM15NFS-15	
		20 m	JWSP-XM15NSS-20	JWSP-XM15NFS-20	
	Right-angle Plug *3	3 m	JWSP-XM15NSL-03	JWSP-XM15NFL-03			5 m	JWSP-XM15NSL-05	JWSP-XM15NFL-05	
		10 m	JWSP-XM15NSL-10	JWSP-XM15NFL-10	
		15 m	JWSP-XM15NSL-15	JWSP-XM15NFL-15	
		20 m	JWSP-XM15NSL-20	JWSP-XM15NFL-20	
For servomotors with holding brakes (Set of two cables *4)	Straight Plug	3 m	JWSP-XM15BSS-03	JWSP-XM15BFS-03			5 m	JWSP-XM15BSS-05	JWSP-XM15BFS-05	
		10 m	JWSP-XM15BSS-10	JWSP-XM15BFS-10	
		15 m	JWSP-XM15BSS-15	JWSP-XM15BFS-15

	Right-angle Plug *3	3 m	JWSP-XM15BSL-03	JWSP-XM15BFL-03			5 m	JWSP-XM15BSL-05	JWSP-XM15BFL-05	
		10 m	JWSP-XM15BSL-10	JWSP-XM15BFL-10	
		15 m	JWSP-XM15BSL-15	JWSP-XM15BFL-15	
		20 m	JWSP-XM15BSL-20	JWSP-XM15BFL-20	

*1 Use flexible cables for moving parts of machines, such as robots.
*2 The recommended bending radius (R) is 90 mm or larger.
*3 The lead installation direction is the non-load side. Contact your Yaskawa representative if you require the leads to be installed in another direction.
*4 This order number is for a set of two cables (main power supply cable and holding brake cable).
When you purchase them separately, the order numbers for main power supply cables are the same as for a servomotor without a holding brake.
The following order numbers are for a holding brake cable. These standard cables are flexible cables.

- Straight Plug: JWSP-XB0FS-□□
- Right-angle Plug: JWSP-XB0FL-□□

Note:

If you need a cable with a length of 20 m to 50 m, consider the operating conditions and specify a suitable length.

■ SGMXG-20 (1.8 kW)

Name	Connector Specifications	Length (L)	Order Number		Appearance

		20 m	JWSP-XM20BSS-20	JWSP-XM20BFS-20	
	Right-angle Plug *3	3 m	JWSP-XM20BSL-03	JWSP-XM20BFL-03			5 m	JWSP-XM20BSL-05	JWSP-XM20BFL-05	
		10 m	JWSP-XM20BSL-10	JWSP-XM20BFL-10	
		15 m	JWSP-XM20BSL-15	JWSP-XM20BFL-15	
		20 m	JWSP-XM20BSL-20	JWSP-XM20BFL-20	

*1 Use flexible cables for moving parts of machines, such as robots.
*2 The recommended bending radius (R) is 90 mm or larger.
*3 The lead installation direction is the non-load side. Contact your Yaskawa representative if you require the leads to be installed in another direction.
*4 This order number is for a set of two cables (main power supply cable and holding brake cable).
When you purchase them separately, the order numbers for main power supply cables are the same as for a servomotor without a holding brake.
The following order numbers are for a holding brake cable. These standard cables are flexible cables.

- Straight Plug: JWSP-XB0FS-□□
- Right-angle Plug: JWSP-XB0FL-□□

Note:

If you need a cable with a length of 20 m to 50 m, consider the operating conditions and specify a suitable length.

■ SGMXG-30 (2.9 kW, when used in combination with the SGDXS-200A)

Specifications and Ratings

Specifications

■ SGM7D-□□F, -□□G, -□□H

Voltage	200 V											
Model: SGM7D-	30F	58F	90F	1AF	01G	05G	08G	18G	24G	34G	45G	03H
Time Rating	Continuous											
Thermal Class	F											
Insulation Resistance	500 VDC, 10 MΩ min.											
Withstand Voltage	1500 VAC for 1 minute											
Excitation	Three-phase											
Mounting	Flange-mounted											
Drive Method	Direct drive											
Rotation Direction	Counterclockwise (CCW) for forward reference when viewed from the load side											
Absolute Accuracy	±15 s											
Repeatability	±1.3 s											
Protective Structure *1	Totally enclosed, self-cooled, IP20				Totally enclosed, self-cooled, IP30		Totally enclosed, self-cooled, IP20					Totally enclosed, self-cooled, IP30

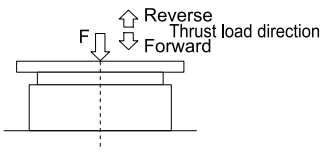
*1 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a heat sink of the dimensions given in the table.

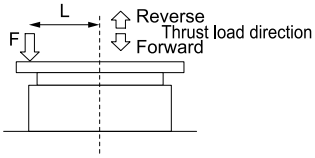
*2 The repetitive rated torque is the value for 60% ED.

*3 The thrust loads and moment loads that are applied while a servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.
The allowable load is for a static load in one direction.
When designing the system, multiply the allowable load by the following safety coefficient depending on the type of load.

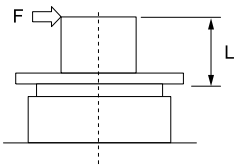
- Smooth load with no shock: 1/3
- Light repetitive load: 1/5
- Shock load: 1/10



Where F is the external force,
Thrust load = F + Load mass
Moment load = 0



Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L



Where F is the external force,
Thrust load = Load mass
Moment load = F × L

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. For the bearings used in these servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

*1 The characteristics are the same for a three-phase 200-VAC input and single-phase 200-VAC input.

Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the servomotor can be used within the intermittent duty zone.
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the servomotor so that the effective torque remains within the continuous duty zone. Refer to the following section for details on the effective torque.

☞ *Torque-Motor Speed Characteristics on page 226*

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the servomotors are given in "*Ratings on page 222*". The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the servomotor. Use the SigmaSize+ AC servo capacity selection program to check the driving conditions. Perform the required steps for each of the following cases.

*1 Contact your Yaskawa representative for information on this program.

■ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Install an external regenerative resistor when the built-in regenerative resistor cannot process all of the regenerative power.

Refer to the following section for the regenerative power (W) that can be processed by the SERVOPACKs.

☞ *Specifications of Built-in Regenerative Resistors in SERVOPACKs on page 573*

■ When an External Regenerative Resistor Is Required

Install the external regenerative resistor which is selected with the SigmaSize+. Contact your Yaskawa representative for information on SigmaSize+.

Refer to the following section for information on the external regenerative resistors.

☞ *Specifications and Dimensions of External Regenerative Resistors on page 574*

External Dimensions

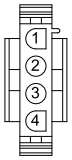
Connector Specifications

SGM7D-□□F

· Servomotor Connector



1	Phase U	Red
2	Phase V	Gray
3	Phase W	Blue
4	FG (frame ground)	Green (yellow)

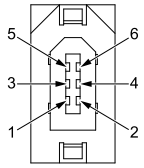
Model

- Plug: 350779-1
- Pins: 350218-3 or 350547-3 (No.1 to 3)
- Ground pin: 350654-1 or 350669-1 (No. 4)
  Manufacturer: Tyco Electronics Japan G.K.

Mating Connector

- Cap: 350780-1
- Socket: 350536-3 or 350550-3

· Encoder Connector



1	PG5V
2	PG0V
3 **1*	BAT
4 **1*	BAT0
5	PS
6	/PS
Connector case	FG (frame ground)

*1 A battery is required only for a multiturn absolute encoder.

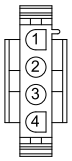
Model: 55102-0600

Manufacturer: Molex Japan LLC

Mating connector: 54280-0609

SGM7D-05G

· Servomotor Connector



1	Phase U	Red
2	Phase V	Gray
3	Phase W	Blue
4	FG (frame ground)	Green

Model

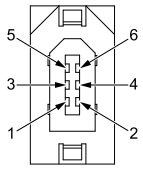
- Plug: 350779-1
- Pins: 350561-3 or 350690-3 (No.1 to 3)
- Ground pin: 350654-1 or 350669-1 (No. 4)

Manufacturer: Tyco Electronics Japan G.K.

Mating Connector

- Cap: 350780-1
- Socket: 350570-3 or 350689-3

· Encoder Connector



1	PG5V
2	PG0V
3 *1*	BAT
4 *1*	BAT0

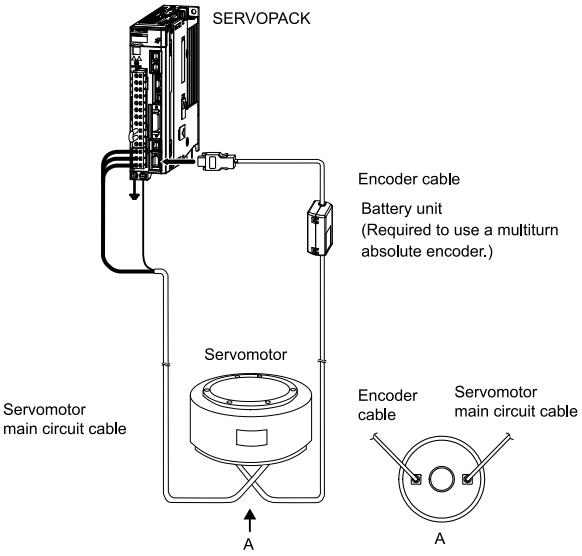
Selecting Cables

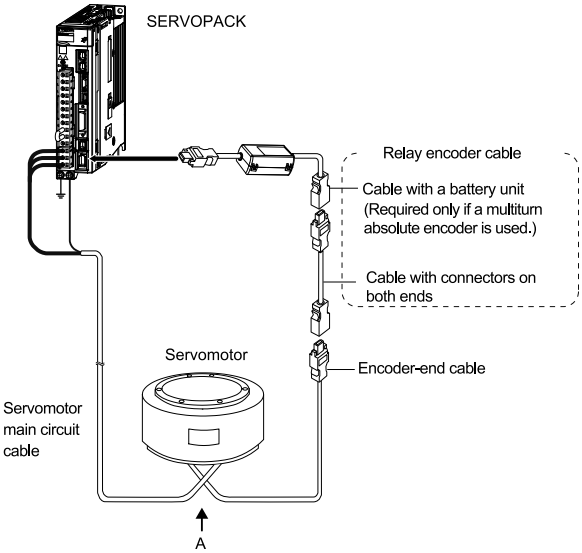
Cable Configurations

The cables shown below are required to connect a servomotor to a SERVOPACK.

Encoder Cables of 20 m or Less



Encoder Cable of 30 m to 50 m (Relay Cable)



Note:

1. If the encoder cable length exceeds 20 m, use a relay encoder cable.
2. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.
3. Refer to the following manual for the following information.
   - Cable dimensional drawings and cable connection specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

   Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

Servomotor Main Circuit Cables

Servomotor Model	Length (L)	Order Number		Appearance
		Standard Cable	Flexible Cable *1	
SGM7D-□□F SGM7D-08G to -45G SGM7D-□□I SGM7D-□□J SGM7D-□□L	3 m	JZSP-CMM00-03-E	JZSP-C7DM21-03-E		5 m	JZSP-CMM00-05-E	JZSP-C7DM21-05-E	
	10 m	JZSP-CMM00-10-E	JZSP-C7DM21-10-E	
	15 m	JZSP-CMM00-15-E	JZSP-C7DM21-15-E	
	20 m	JZSP-CMM00-20-E	JZSP-C7DM21-20-E	
SGM7D-01G and -05G SGM7D-□□H SGM7D-□□K	3 m	JZSP-CMM00-03-E	JZSP-CMM01-03-E		5 m	JZSP-CMM00-05-E	JZSP-CMM01-05-E	
	10 m	JZSP-CMM00-10-E	JZSP-CMM01-10-E	
	15 m	JZSP-CMM00-15-E	JZSP-CMM01-15-E	
	20 m	JZSP-CMM00-20-E	JZSP-CMM01-20-E	

*1 Use flexible cables for moving parts of machines, such as robots. The recommended bending radius (R) is 90 mm or larger.

Note:

Direct drive servomotors are not available with holding brakes.

Encoder Cables of 20 m or Less

Servomotor Model	Name	Length (L)	Order Number		Appearance
			Standard Cable	Flexible Cable *1	
All SGM7D models	For incremental encoder (without battery unit)	3 m	JZSP-CMP00-03-E	JZSP-CMP10-03-E			5 m	JZSP-CMP00-05-E	JZSP-CMP10-05-E	
		10 m	JZSP-CMP00-10-E	JZSP-CMP10-10-E	
		15 m	JZSP-CMP00-15-E	JZSP-CMP10-15-E	
		20 m	JZSP-CMP00-20-E	JZSP-CMP10-20-E

The above table shows combinations of the rated torque and outer diameter. The fourth through seventh digits have been omitted.

Specifications and Ratings

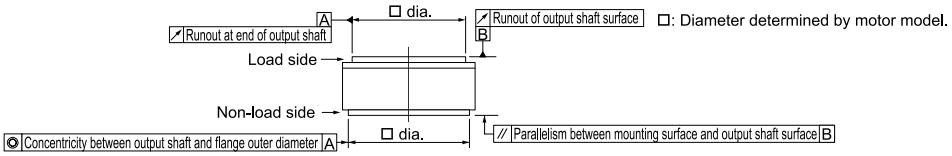
Specifications

Voltage			200 V									
Model: SGM7E-			02B	05B	07B	04C	10C	14C	08D	17D	25D	16E	35E
Time Rating			Continuous									
Thermal Class			A									
Insulation Resistance			500 VDC, 10 MΩ min.									
Withstand Voltage			1500 VAC for 1 minute									
Excitation			Permanent magnet									
Mounting			Flange-mounted									
Drive Method			Direct drive									
Rotation Direction			Counterclockwise (CCW) for forward reference when viewed from the load side									
Vibration Class *1			V15									
Absolute Accuracy			±15 s									
Repeatability			±1.3 s									
Protective Structure *2			Totally enclosed, self-cooled, IP42 (The protective structure is IP40 for CE Marking.)									
Environmental Conditions	Surrounding Air Temperature		0°C to 40°C (with no freezing)									
	Surrounding Air Humidity		20% to 80% relative humidity (with no condensation)									
	Installation Site		• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1000 m or less. • Must be free of strong magnetic fields.									
	Storage Environment		Store the servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to +60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)									
Mechanical Tolerances *3	Runout of Output Shaft Surface	mm	0.02 (0.01 for high machine precision option)									
	Runout at End of Output Shaft	mm	0.04 (0.01 for high machine precision option)									
	Parallelism between Mounting Surface and Output Shaft Surface	mm	0.07						0.08			
	Concentricity between Output Shaft and Flange Outer Diameter	mm	0.07						0.08			
Impact Resistance *4	Impact Acceleration at Flange		490 m/s²									
	Number of Impacts		2 times									
Vibration Resistance *4	Vibration Acceleration at Flange		49 m/s²									
Applicable SERVOPACKs		SGDXS-	2R8A									5R5A
		SGDXW-										

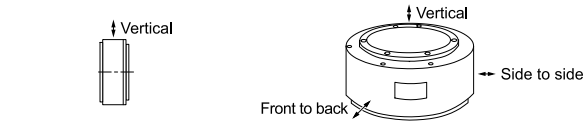
*1 A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the servomotor without a load at the rated rotation speed.

*2 The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used. The protective structure is IP40 for CE Marking.

*3 Refer to the following figure for the relevant locations on the servomotor. Refer to the dimensional drawings of the individual servomotors for more information on tolerances.



*4 The given values are for when the servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.
The strength of the vibration that the servomotor can withstand depends on the application. Check the vibration acceleration.



Shock Applied to the Servomotor

Vibration Applied to the Servomotor

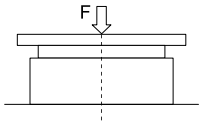
Rotor Moment of Inertia		$\times 10^{-4}$ kg·m^2	28.0	51.0	77.0	77.0	140	220	285	510	750	930	1430
Rated Power Rate *1		kW/s	1.43	4.90	6.36	2.08	7.14	8.91	2.25	5.67	8.33	2.75	8.57
Rated Angular Acceleration *1		rad/s^2	710	980	910	520	710	640	280	330		170	240
Heat Sink Size		mm	350 × 350 × 12			450 × 450 × 12			550 × 550 × 12			650 × 650 × 12	
Allowable Load Moment of Inertia (Motor Moment of Inertia Ratio)		times	10				5	3					
	With external regenerative resistor	times	10				5	3					
Allowable Load *3	Allowable Thrust Load	N	1500			3300			4000			11000	
	Allowable Moment Load	N·m	40	50	64	70	75	90	93	103	135	250	320

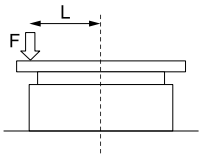
*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

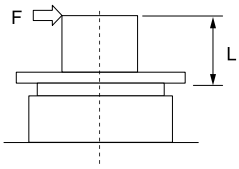
*3 The thrust loads and moment loads that are applied while a servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.



Where F is the external force,
Thrust load = F + Load mass
Moment load = 0



Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L



Where F is the external force,
Thrust load = Load mass
Moment load = F × L

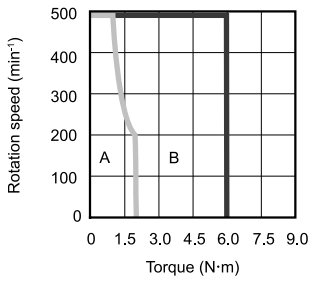
Note:

For the bearings used in these servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

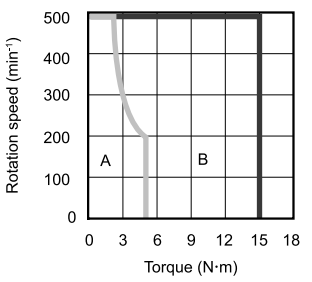
Torque-Motor Speed Characteristics

A : Continuous duty zone
B : Intermittent duty zone

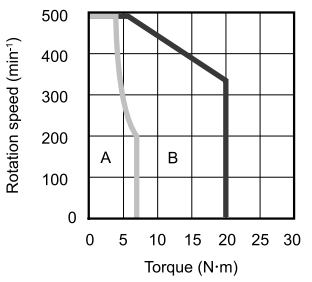
SGM7E-02B



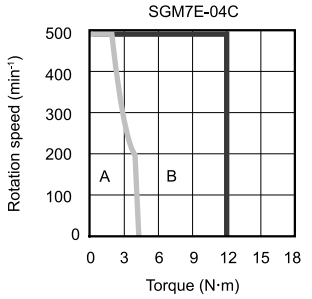
SGM7E-05B



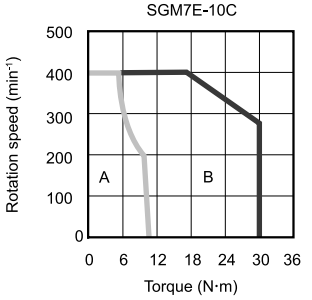
SGM7E-07B



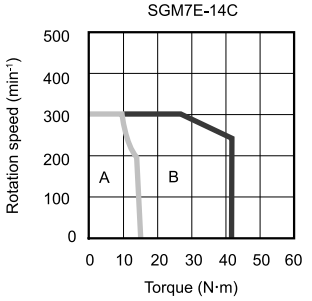
SGM7E-04C



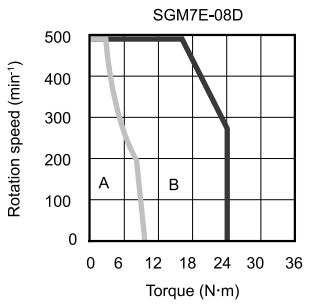
SGM7E-10C



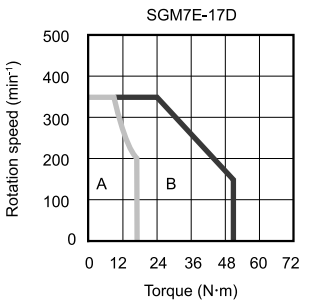
SGM7E-14C



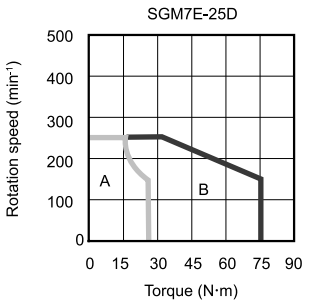
SGM7E-08D



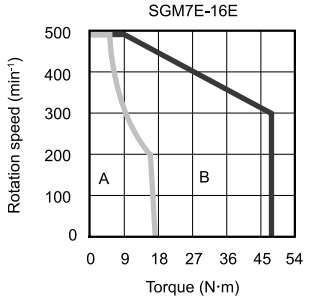
SGM7E-17D



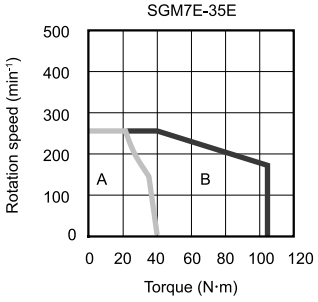
SGM7E-25D



SGM7E-16E



SGM7E-35E



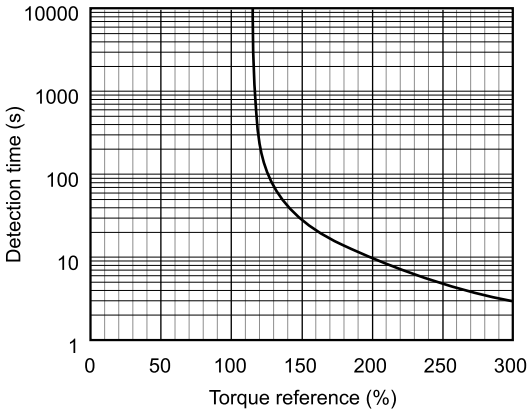
Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective torque is within the allowable range for the rated torque, the servomotor can be used within the intermittent duty zone.
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

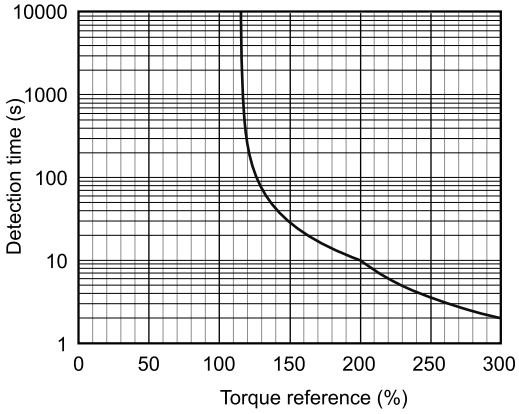
Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

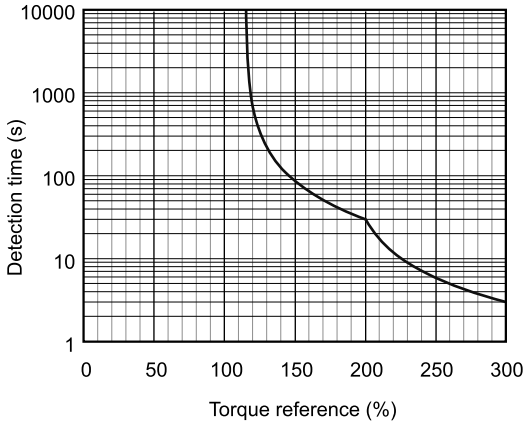
SGM7E-02B, -05B, -07B, -10C, -17D, and -35E



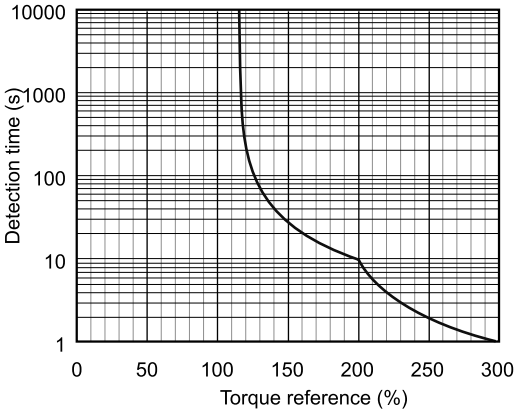
SGM7E-04C



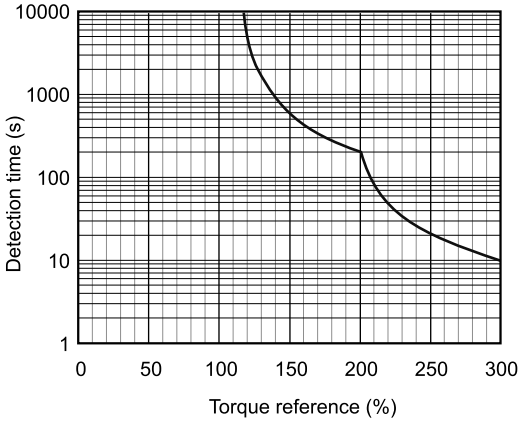
SGM7E-14C



SGM7E-08D and -16E



SGM7E-25D



Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the servomotor so that the effective torque remains within the continuous duty zone. Refer to the following section for details on the effective torque.

☞ *Torque-Motor Speed Characteristics on page 255*

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the servomotors are given in "*Ratings on page 254*". The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the servomotor. Use the SigmaSize+ AC servo capacity selection program to check the driving conditions. Perform the required steps for each of the following cases.

*1 Contact your Yaskawa representative for information on this program.

■ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

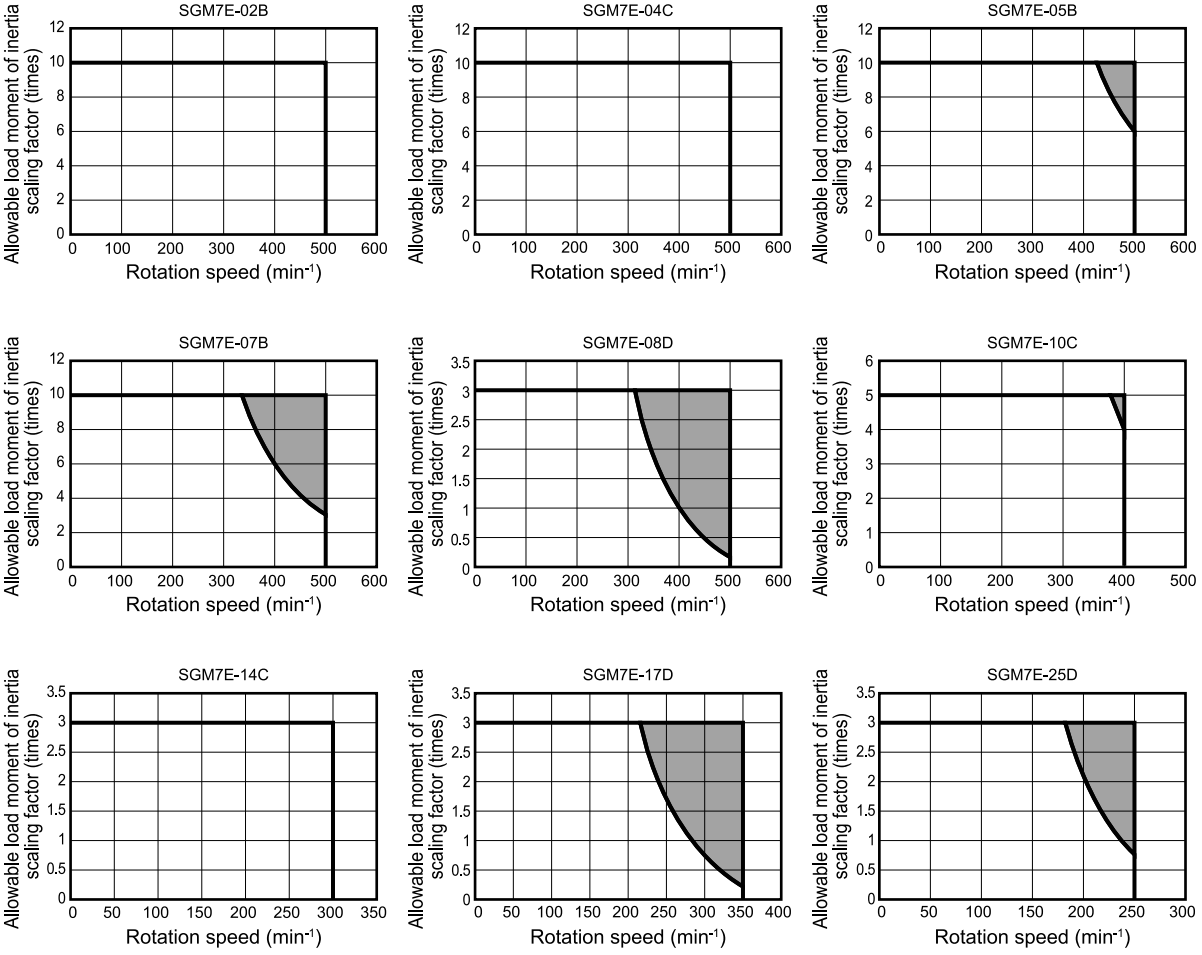
If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Install an external regenerative resistor when the built-in regenerative resistor cannot process all of the regenerative power. Refer to the following section for the regenerative power (W) that can be processed by the SERVOPACKs.

☞ *Specifications of Built-in Regenerative Resistors in SERVOPACKs on page 573*

■ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the rotation speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an external regenerative resistor is required in the shaded areas of the graphs.



Note:

Applicable SERVOPACK Model: SGDXS-2R8A

■ When an External Regenerative Resistor Is Required

Install the external regenerative resistor which is selected with the SigmaSize+. Contact your Yaskawa representative for information on SigmaSize+.

Refer to the following section for information on the external regenerative resistors.

☞ *Specifications and Dimensions of External Regenerative Resistors on page 574*

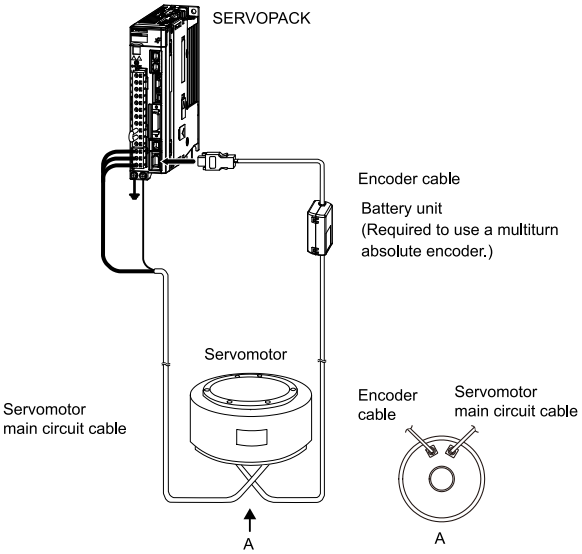
Selecting Cables

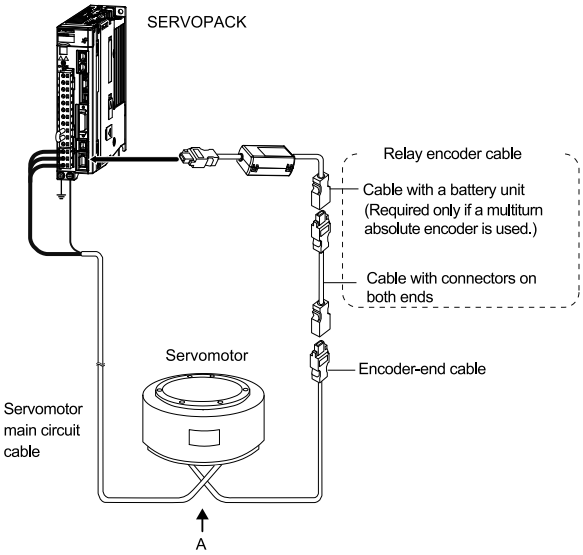
Cable Configurations

The cables shown below are required to connect a servomotor to a SERVOPACK.

Encoder Cables of 20 m or Less



Encoder Cable of 30 m to 50 m (Relay Cable)



Note:

1. If the encoder cable length exceeds 20 m, use a relay encoder cable.
2. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.
3. Refer to the following manual for the following information.
   - Cable dimensional drawings and cable connection specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

   Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

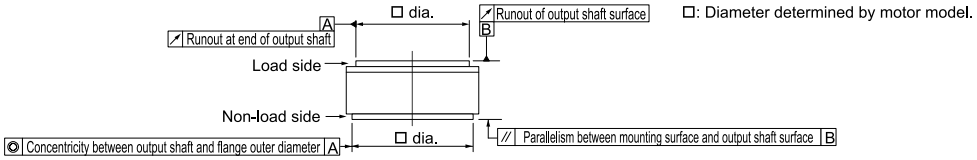
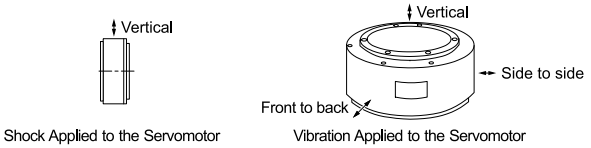
*1 A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the servomotor without a load at the rated rotation speed.

*2 The hollow hole section, motor mounting surface, output shaft surface, and gap around the rotating part of the shaft are excluded. Protective structure specifications apply only when the special cable is used.

*3 Refer to the following figure for the relevant locations on the servomotor.
Refer to the dimensional drawings of the individual servomotors for more information on tolerances.



*4 The given values are for when the servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.
The strength of the vibration that the servomotor can withstand depends on the application. Check the vibration acceleration.



*5 Use derated values for this combination. Refer to the following section for details on the derated values.

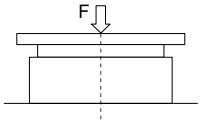
Heat Sink Size		mm	300 × 300 × 12		350 × 350 × 12				450 × 450 × 12			550 × 550 × 12	
Allowable Load Moment of Inertia (Rotor Moment of Inertia Ratio)		times	25	35	35	25	40	45	15	25	25	10	15
	With external regenerative resistor	times	25	35	35	25	40	45	15	25	25	10	15
Allowable Load *3	Allowable Thrust Load	N	1100			1500			3300			4000	
	Allowable Moment Load	N·m	22	24	26	45	55	65	92	98	110	210	225

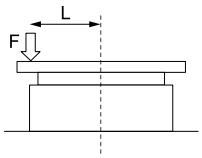
*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

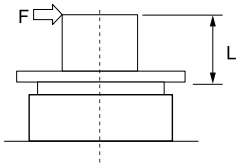
*3 The thrust loads and moment loads that are applied while a servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.



Where F is the external force,
Thrust load = F + Load mass
Moment load = 0



Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L



Where F is the external force,
Thrust load = Load mass
Moment load = F × L

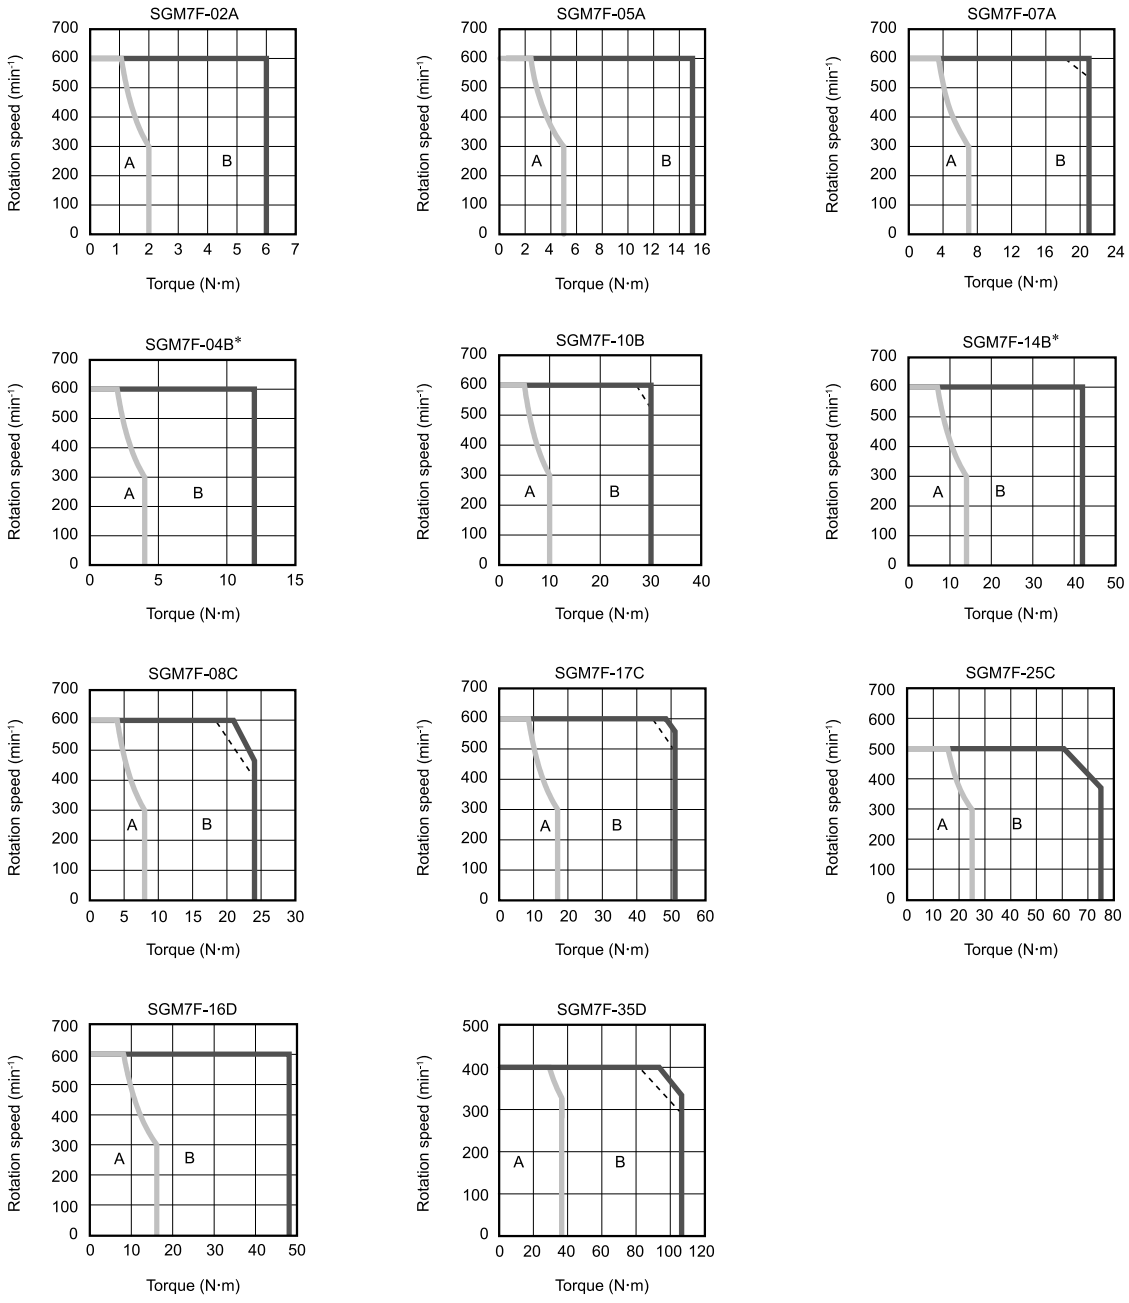
*4 If you use an SGDXS-7R6A SERVOPACK and SGM7E-35D servomotor together, use this value (a derated value).

Note:

For the bearings used in these servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

Torque-Motor Speed Characteristics

A : Continuous duty zone ——— (solid lines): With three-phase 200-V or single-phase 230-V input
B : Intermittent duty zone - - - - - - - (dotted lines): With single-phase 200-V input



*1 The characteristics are the same for a three-phase 200-VAC input and single-phase 200-VAC input.

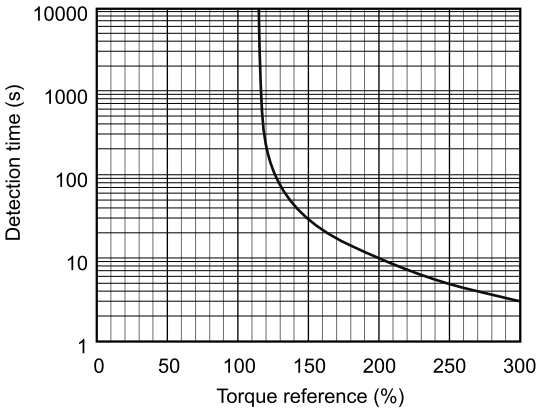
Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

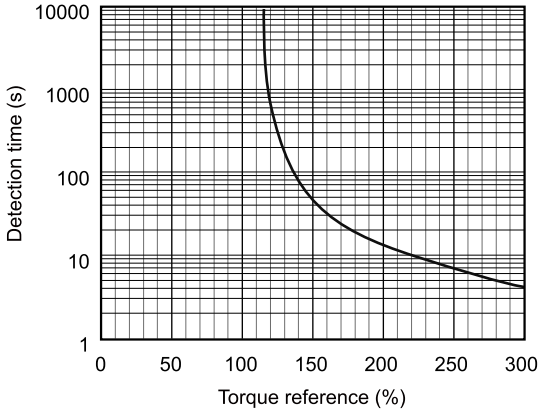
Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

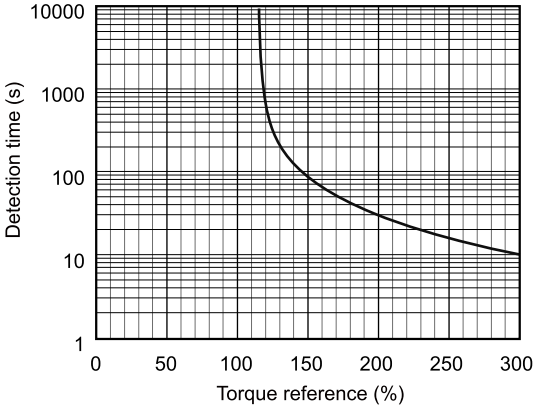
SGM7F-□□A and -□□B



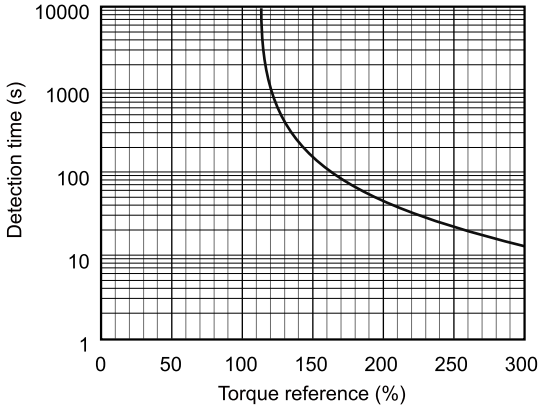
SGM7F-08C



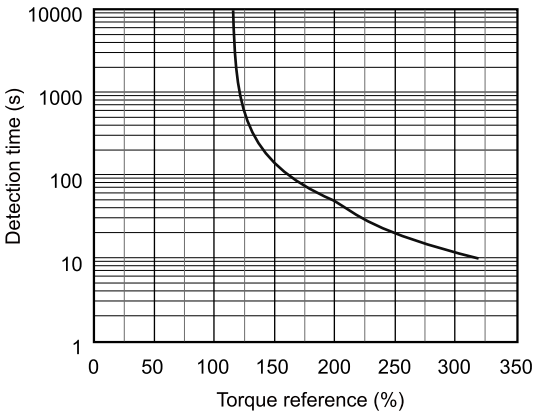
SGM7F-17C and -25C



SGM7F-16D



SGM7F-35D



Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the servomotor so that the effective torque remains within the continuous duty zone. Refer to the following section for details on the effective torque.

☞ *Torque-Motor Speed Characteristics on page 274*

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the servomotors are given in "*Ratings on page 272*". The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by the drive conditions of the servomotor. Use the SigmaSize+ AC servo capacity selection program to check the driving conditions. Perform the required steps for each of the following cases.

*1 Contact your Yaskawa representative for information on this program.

■ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

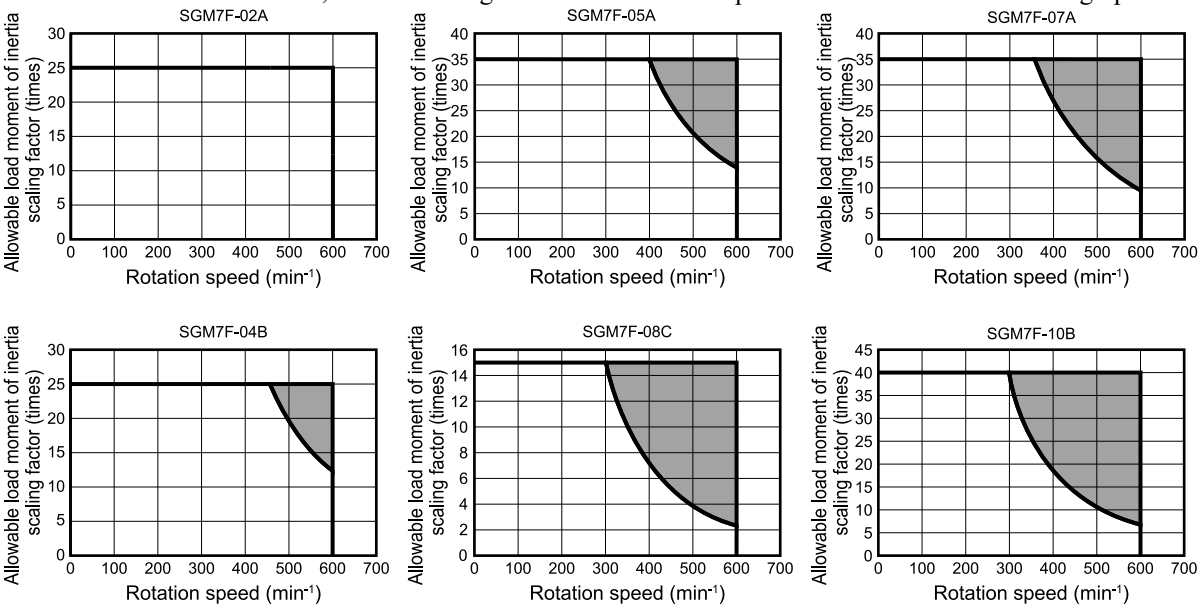
Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Install an external regenerative resistor when the built-in regenerative resistor cannot process all of the regenerative power.

Refer to the following section for the regenerative power (W) that can be processed by the SERVOPACKs.

☞ *Specifications of Built-in Regenerative Resistors in SERVOPACKs on page 573*

■ SERVOPACKs without Built-in Regenerative Resistors

The following graph shows the allowable load moment of inertia scaling factor of the rotation speed (reference values for deceleration operation at or above the rated torque). Application is possible without an external regenerative resistor within the allowable value. However, an external regenerative resistor is required in the shaded areas of the graphs.



Note:

Applicable SERVOPACK Model: SGDXS-2R8A

■ When an External Regenerative Resistor Is Required

Install the external regenerative resistor which is selected with the SigmaSize+. Contact your Yaskawa representative for information on SigmaSize+.

Refer to the following section for information on the external regenerative resistors.

☞ *Specifications and Dimensions of External Regenerative Resistors on page 574*

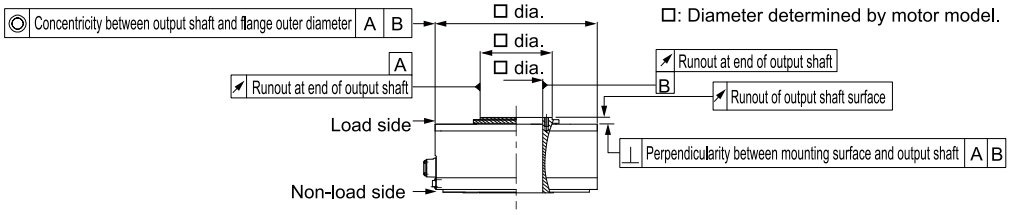
Specifications and Ratings: Medium Capacity

Specifications

Voltage			200 V					
Model: SGM7F-			45M	80M	1AM	80N	1EN	2ZN
Time Rating			Continuous					
Thermal Class			F					
Insulation Resistance			500 VDC, 10 MΩ min.					
Withstand Voltage			1500 VAC for 1 minute					
Excitation			Permanent magnet					
Mounting			Flange-mounted					
Drive Method			Direct drive					
Rotation Direction			Counterclockwise (CCW) for forward reference when viewed from the load side					
Vibration Class *1			V15					
Absolute Accuracy			±15 s					
Repeatability			±1.3 s					
Protective Structure *2			Totally enclosed, self-cooled, IP44 (The protective structure is IP40 for CE Marking.)					
Environmental Conditions	Surrounding Air Temperature		0°C to 40°C (with no freezing)					
	Surrounding Air Humidity		20% to 80% relative humidity (with no condensation)					
	Installation Site		• Must be indoors and free of corrosive and explosive gases. • Must be well-ventilated and free of dust and moisture. • Must facilitate inspection and cleaning. • Must have an altitude of 1000 m or less. • Must be free of strong magnetic fields.					
	Storage Environment		Store the servomotor in the following environment if you store it with the power cable disconnected. Storage Temperature: -20°C to +60°C (with no freezing) Storage Humidity: 20% to 80% relative humidity (with no condensation)					
Mechanical Tolerances *3	Runout of Output Shaft Surface	mm	0.02 (0.01 for high machine precision option)					
	Runout at End of Output Shaft	mm	0.04 (0.01 for high machine precision option)					
	Parallelism between Mounting Surface and Output Shaft Surface	mm	–					
	Concentricity between Output Shaft and Flange Outer Diameter	mm	0.08					
	Perpendicularity between Mounting Surface and Output Shaft	mm	0.08					
Impact Resistance *4	Impact Acceleration at Flange		490 m/s^2					
	Number of Impacts		2 times					
Vibration Resistance *4	Vibration Acceleration at Flange		24.5 m/s^2					
Applicable SERVOPACKs	SGDXS-		7R6A	120A	180A	120A	200A	
	SGDXW-		7R6A	–				

*1 A vibration class of V15 indicates a vibration amplitude of 15 μm maximum on the servomotor without a load at the rated rotation speed.
*2 This does not apply to the shaft opening. Protective structure specifications apply only when the special cable is used.

*3 Refer to the following figure for the relevant locations on the servomotor. Refer to the dimensional drawings of the individual servomotors for more information on tolerances.



*4 The given values are for when the servomotor shaft is mounted horizontally and shock or vibration is applied in the directions shown in the following figures.
The strength of the vibration that the servomotor can withstand depends on the application. Check the vibration acceleration.

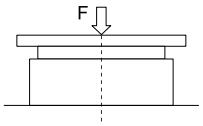
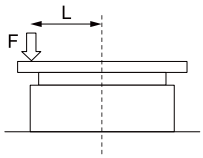
*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C. These are typical values.
*2 The rated torques are the continuous allowable torque values at a surrounding air temperature of 40°C with a steel heat sink of the dimensions given in the table.

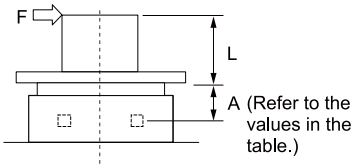
*3 The thrust loads and moment loads that are applied while a servomotor is operating are roughly classified into the following patterns. Design the machine so that the thrust loads or moment loads will not exceed the values given in the table.



Where F is the external force,
Thrust load = F + Load mass
Moment load = 0



Where F is the external force,
Thrust load = F + Load mass
Moment load = F × L



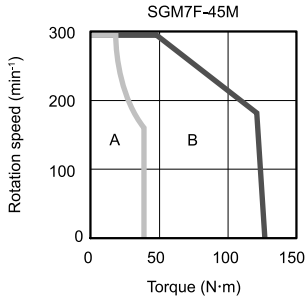
Where F is the external force,
Thrust load = Load mass
Moment load = F × (L + A)

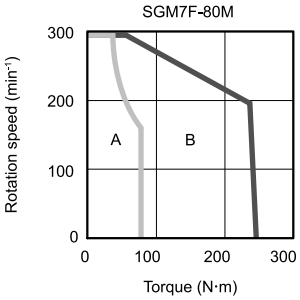
Note:

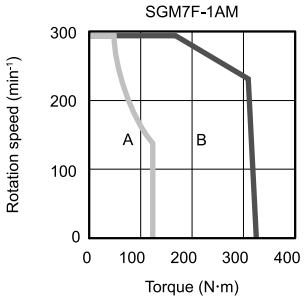
For the bearings used in these servomotors, the loss depends on the bearing temperature. The amount of heat loss is higher at low temperatures.

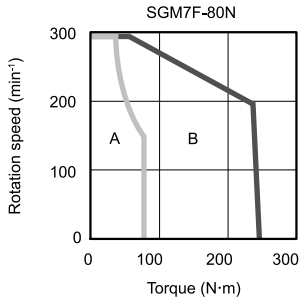
Torque-Motor Speed Characteristics

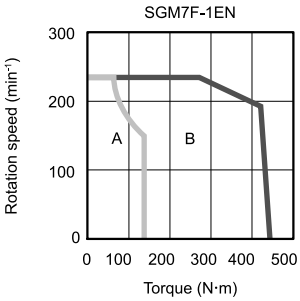
A : Continuous duty zone
B : Intermittent duty zone

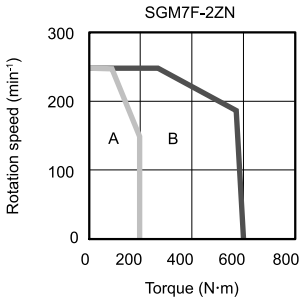












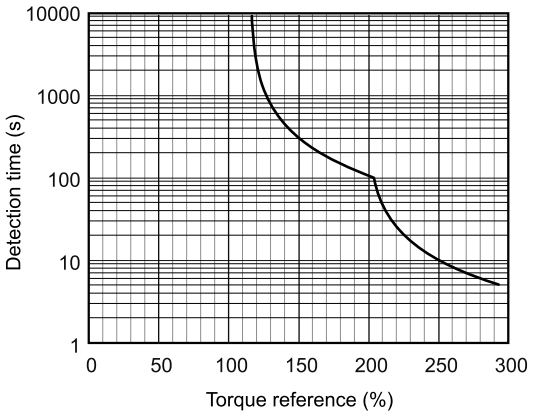
Note:

1. These values (typical values) are for operation in combination with a SERVOPACK when the temperature of the armature winding is 20°C.
2. If the effective torque is within the allowable range for the rated torque, the servomotor can be used within the intermittent duty zone.
3. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

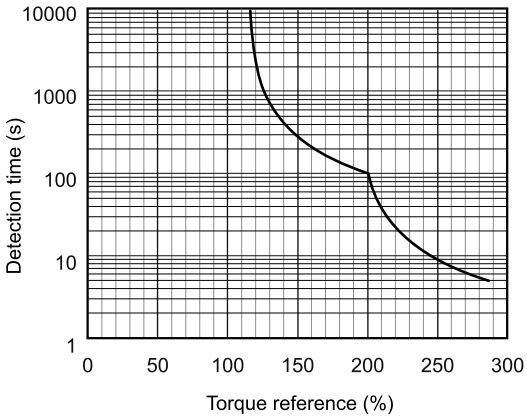
Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

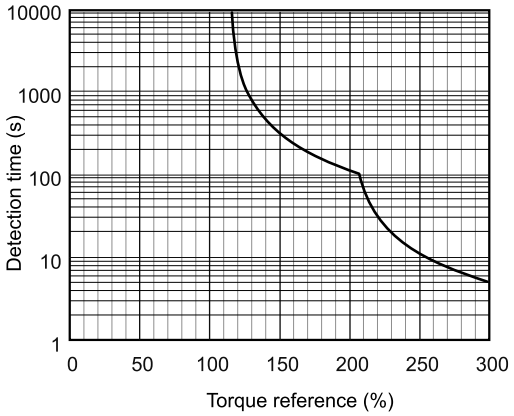
SGM7F-45M



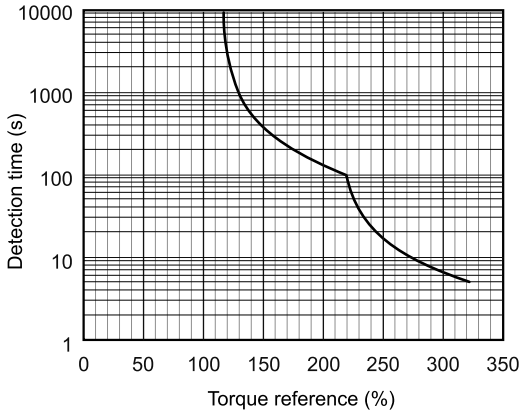
SGM7F-80M



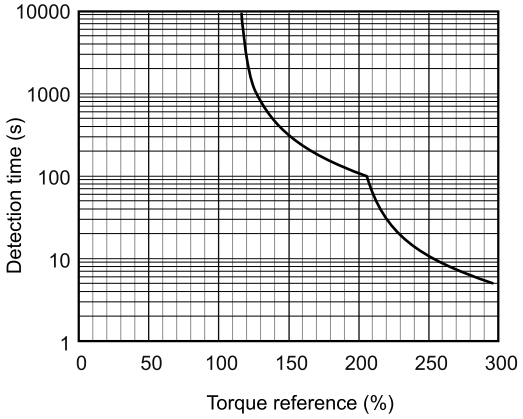
SGM7F-1AM and -80N



SGM7F-1EN



SGM7F-2ZN



Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the servomotor so that the effective force remains within the continuous duty zone given in *Torque-Motor Speed Characteristics on page 279*.

Allowable Load Moment of Inertia

The allowable load moments of inertia (motor moment of inertia ratios) for the servomotors are given in "*Ratings on page 278*". The values are determined by the regenerative energy processing capacity of the SERVOPACK and are also affected by

the drive conditions of the servomotor. Use the SigmaSize+ AC servo capacity selection program to check the driving conditions. Perform the required steps for each of the following cases.

*1 Contact your Yaskawa representative for information on this program.

■ Exceeding the Allowable Load Moment of Inertia

Use one of the following measures to adjust the load moment of inertia to within the allowable value.

- Reduce the torque limit.
- Reduce the deceleration rate.
- Reduce the maximum motor speed.

If the above steps is not possible, install an external regenerative resistor.

Information An Overvoltage Alarm (A.400) is likely to occur during deceleration if the load moment of inertia exceeds the allowable load moment of inertia. SERVOPACKs with a built-in regenerative resistor may generate a Regenerative Overload Alarm (A.320). Install an external regenerative resistor when the built-in regenerative resistor cannot process all of the regenerative power.

Refer to the following section for the regenerative power (W) that can be processed by the SERVOPACKs.

☞ *Specifications of Built-in Regenerative Resistors in SERVOPACKs on page 573*

■ When an External Regenerative Resistor Is Required

Install the external regenerative resistor which is selected with the SigmaSize+. Contact your Yaskawa representative for information on SigmaSize+.

Refer to the following section for information on the external regenerative resistors.

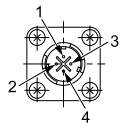
Connector Specifications

SGM7F-□□A, -□□B, -□□C, or -□□D: Flange Specification 1

· Servomotor Connector



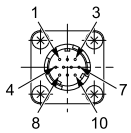
1	Phase U
2	Phase V
3	Phase W
4	FG (frame ground)

Model: JN1AS04MK2R

Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS04FK1 (Not provided by Yaskawa.)

· Encoder Connector



1	PS
2	/PS
3	–
4	PG5V
5 *1*	BAT0
6	–
7	FG (frame ground)
8 *1*	BAT
9	PG0V
10	–

*1 A battery is required only for a multiturn absolute encoder.

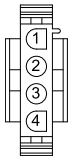
Model: JN1AS10ML1-R

Manufacturer: Japan Aviation Electronics Industry, Ltd.

Mating connector: JN1DS10SL1 (Not provided by Yaskawa.)

SGM7F-□□A, -□□B, -□□C, or -□□D: Flange Specification 4

· Servomotor Connector



1	Phase U	Red
2	Phase V	White
3	Phase W	Blue
4	FG (frame ground)	Green (yellow)

Model

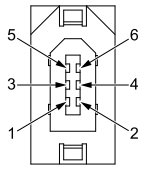
- Plug: 350779-1
- Pins: 350561-3 or 350690-3 (No.1 to 3)
- Ground pin: 350654-1 or 350669-1 (No. 4)

Manufacturer: Tyco Electronics Japan G.K.

Mating Connector

- Cap: 350780-1
- Socket: 350570-3 or 350689-3

· Encoder Connector



1	PG5V
2	PG0V
3 *1*	BAT
4 *1*	BAT0
5	PS
6	/PS
Connector case	FG (frame ground)

*1 A battery is required only for a multiturn absolute encoder.

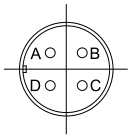
Model: 55102-0600

Manufacturer: Molex Japan LLC

Mating connector: 54280-0609

SGM7F-□□M, -□□N: Flange Specification 1, 3

· Servomotor Connector



A	Phase U
B	Phase V
C	Phase W
D	FG (frame ground)

Model: CE05-2A18-10PD

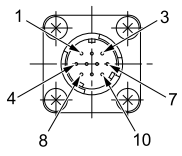
Manufacturer: DDK Ltd.

Mating Connector

Plug: CE05-6A18-10SD-D-BSS

Cable clamp: CE3057-10A-□(D265)

· Encoder Connector



1	PS
2	/PS
3	–
4	PG5V
5 *1*	BAT0
6	–
7	FG (frame ground)
8 *1*	BAT
9	PG0V
10	–

*1 A battery is required only for a multiturn absolute encoder.

Model: JN1AS10ML1

Manufacturer: Japan Aviation Electronics Industry, Ltd.

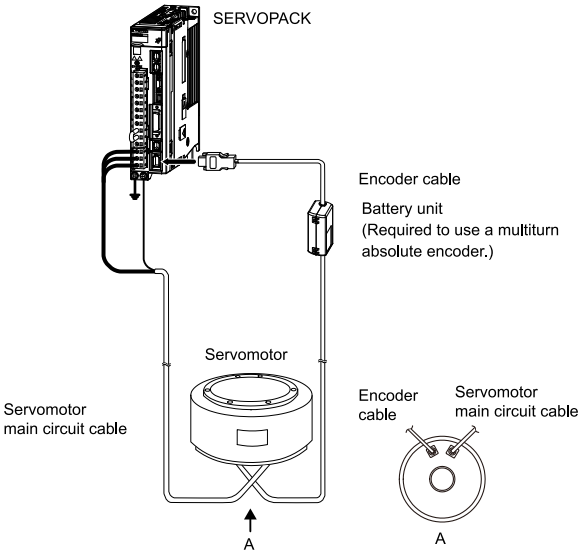
Mating connector: JN1DS10SL1 (Not provided by Yaskawa.)

Selecting Cables

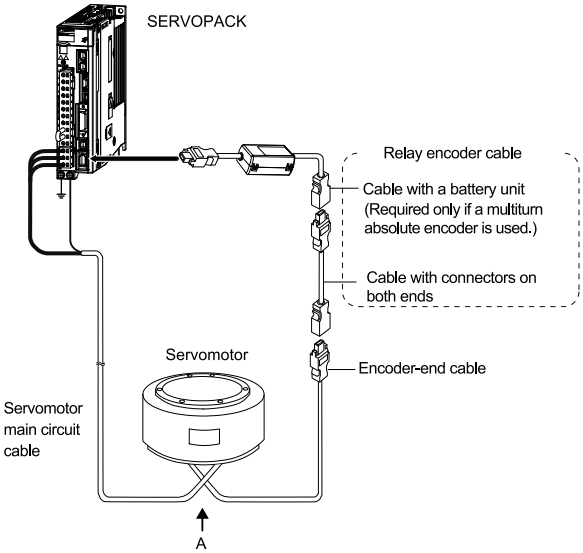
Cable Configurations

The cables shown below are required to connect a servomotor to a SERVOPACK.

Encoder Cables of 20 m or Less



Encoder Cable of 30 m to 50 m (Relay Cable)



Note:

1. If the encoder cable length exceeds 20 m, use a relay encoder cable.
2. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.
3. Refer to the following manual for the following information.
   - Cable dimensional drawings and cable connection specifications
   - Order numbers and specifications of individual connectors for cables
   - Order numbers and specifications for wiring materials

   Σ-X-Series Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

- C = Without mounting holes on the bottom
- CT = With mounting holes on the bottom

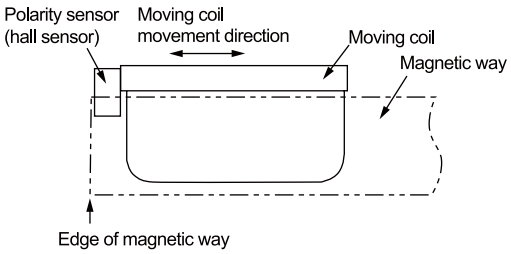
Note:

This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

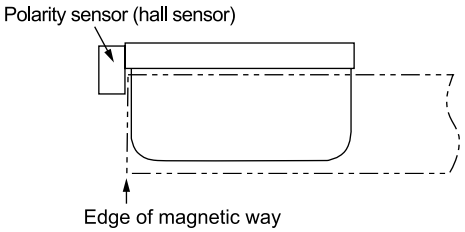
Precautions on Moving Coils with Polarity Sensors (Hall Sensors)

When you use a moving coil with a polarity sensor (hall sensor), the magnetic way must cover the bottom of the polarity sensor (hall sensor). Refer to the example that shows the correct installation. When determining the length of the moving coil's stroke or the length of the magnetic way, consider the total length (L) of the moving coil and the polarity sensor (hall sensor). Refer to the following table.

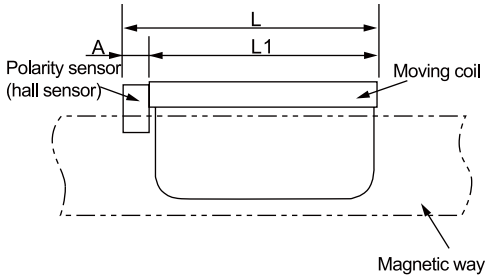
<Correct>



<Incorrect>



■ Total Length of Moving Coil with Polarity Sensor (Hall Sensor)



Moving Coil Model SGLGW-	Length of Moving Coil L1 [mm]	Length of Polarity Sensor (Hall Sensor) A [mm]	Total Length L [mm]

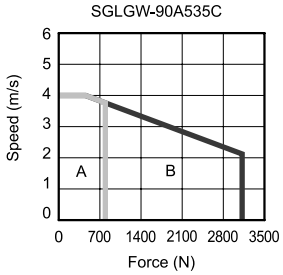
SGLGW-90A535C



*1 The characteristics are the same for three-phase 200 V and single-phase 200 V.

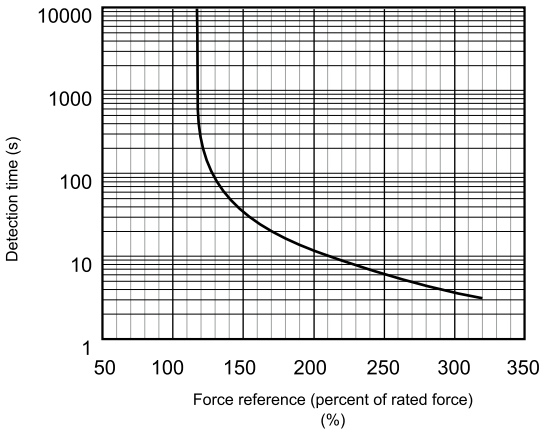
Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the servomotor can be used within the intermittent duty zone.
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

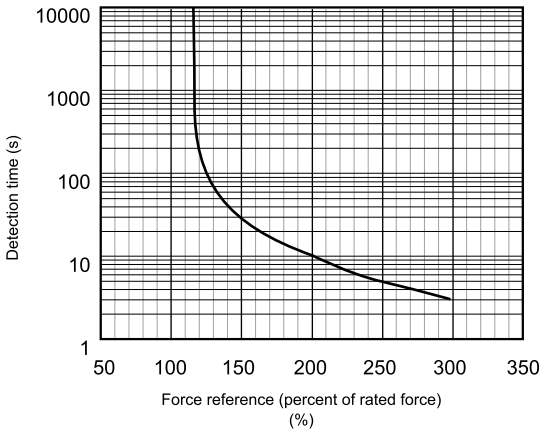
Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

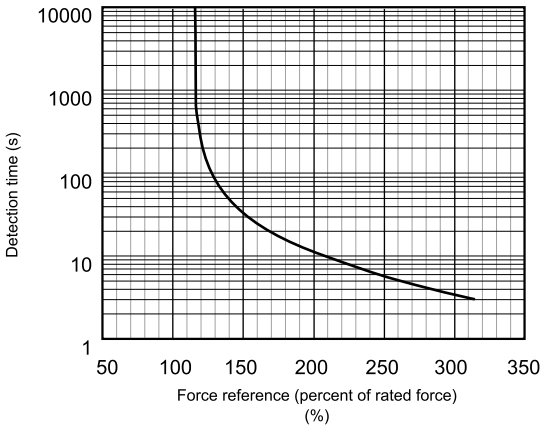
SGLGW-30A



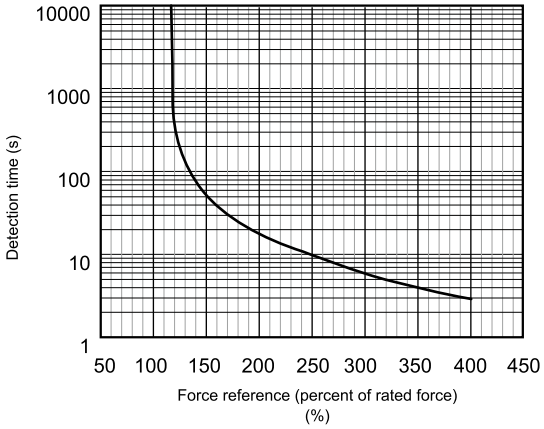
SGLGW-40A



SGLGW-60A



SGLGW-90A



Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.

Use the servomotor so that the effective force remains within the continuous duty zone given in *Force-Motor Speed Characteristics on page 303*.

Specifications: With High-Force Magnetic Way

Linear Servomotor Moving Coil Model SGLGW-	40A			60A		
	140C	253C	365C	140C	253C	365C
Time Rating	Continuous					
Thermal Class	B					
Insulation Resistance	500 VDC, 10 MΩ min.					
Withstand Voltage	1,500 VAC for 1 minute					
Excitation	Permanent magnet					
Cooling Method	Self-cooled or air-cooled					
Protective Structure	IP00					

Continued on next page.

Continued from previous page.

Linear Servomotor Moving Coil Model SGLGW-		40A			60A		
		140C	253C	365C	140C	253C	365C
Environmental Conditions	Surrounding Air Temperature	0°C to 40°C (with no freezing)					
	Surrounding Air Humidity	20% to 80% relative humidity (with no condensation)					
	Installation Site	Must be indoors and free of corrosive and explosive gases. Must be well-ventilated and free of dust and moisture. Must facilitate inspection and cleaning. Must have an altitude of 1,000 m or less. Must be free of strong magnetic fields.					
Shock Resistance	Impact Acceleration Rate	196 m/s^2					
	Number of Impacts	2 times					
Vibration Resistance	Vibration Acceleration Rate	49 m/s^2(the vibration resistance in three directions, vertical, side-to-side, and front-to-back)

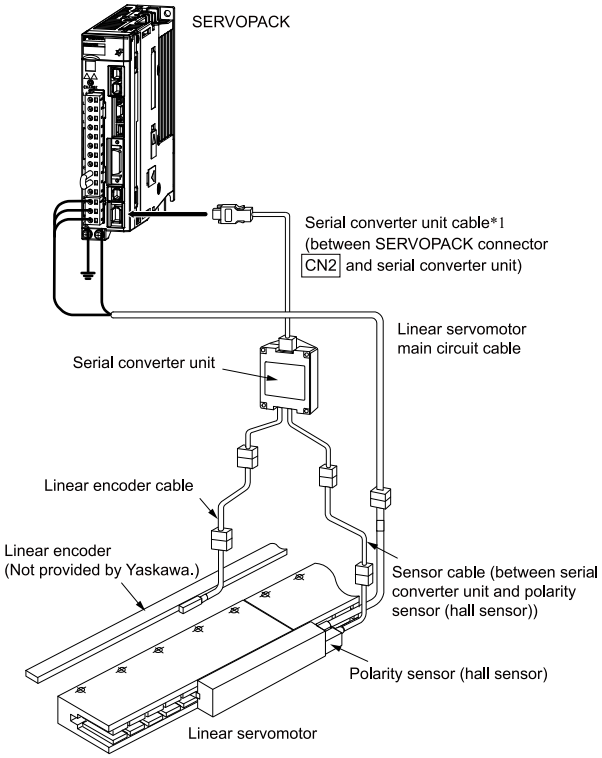
Selecting Cables

Cable Configurations

Refer to *Recommended Linear Encoders on page 382* to select a linear encoder.
Prepare the cable required for the encoder.



*1 You can connect directly to an absolute linear encoder.

Note:
Refer to the following manual for the following information.
- Cable dimensional drawings and cable connection specifications

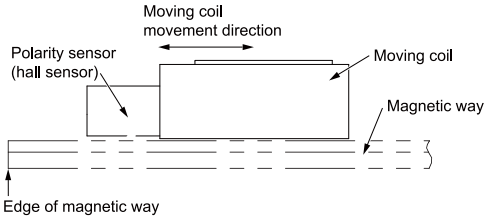
Precautions on Moving Coils with Polarity Sensors (Hall Sensors)

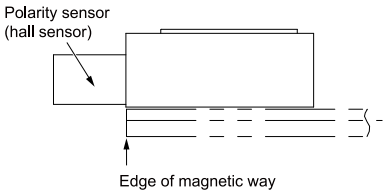
When you use a moving coil with a polarity sensor (hall sensor), the magnetic way must cover the bottom of the polarity sensor (hall sensor). Refer to the example that shows the correct installation.

When determining the length of the moving coil's stroke or the length of the magnetic way, consider the total length (L) of the moving coil and the polarity sensor (hall sensor). Refer to the following table.

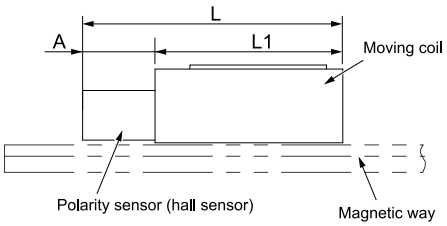
<Correct>



<Incorrect>



■ Total Length of Moving Coil with Polarity Sensor (Hall Sensor)



Moving Coil Model SGLFW2-	Length of Moving Coil L1 [mm]	Length of Polarity Sensor (Hall Sensor) A [mm]	Total Length L [mm]
30A070AS	70	27	97
30A120AS	125		152
30A230AS	230		257
45A200AS	205	32	237
45A380AS	384		416
90A200AS	205	32	237
90A380AS	384		416
90A560AS	563		595
1DA380AS	384	32	416

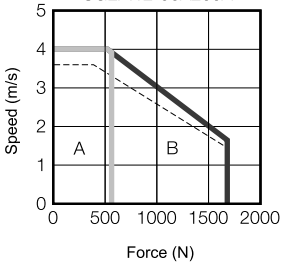
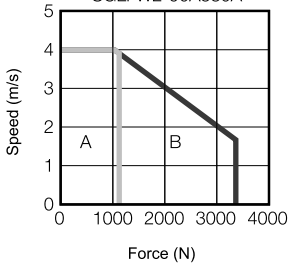
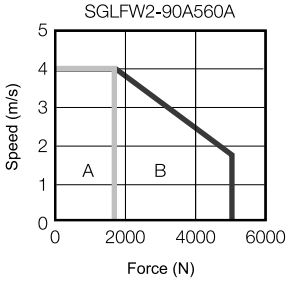
SGLFW2-90A200A



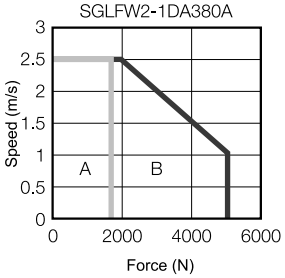
SGLFW2-90A380A



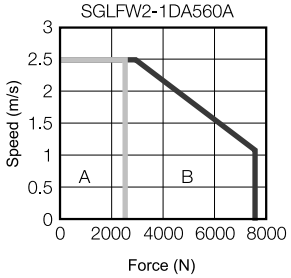
SGLFW2-90A560A



SGLFW2-1DA380A



SGLFW2-1DA560A

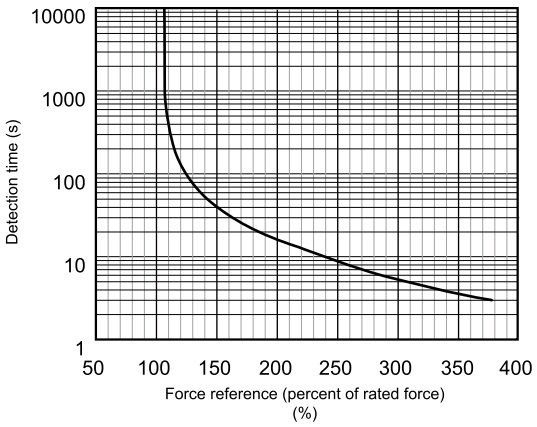


Note:

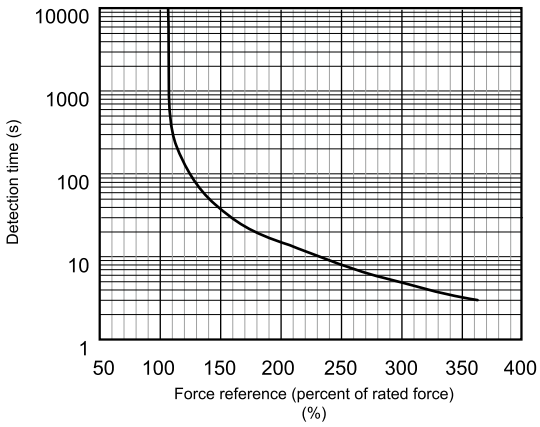
1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the servomotor can be used within the intermittent duty zone.
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

Servomotor Overload Protection Characteristics

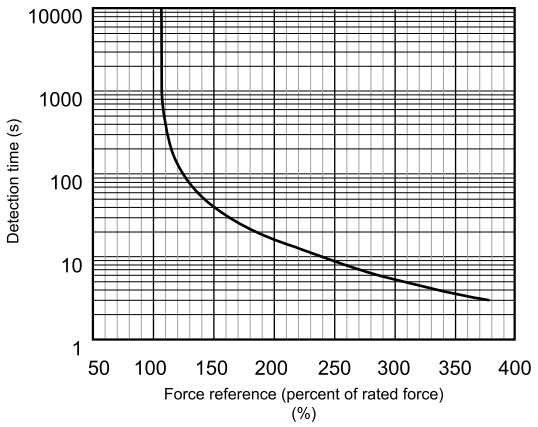
SGLFW2-30A070A



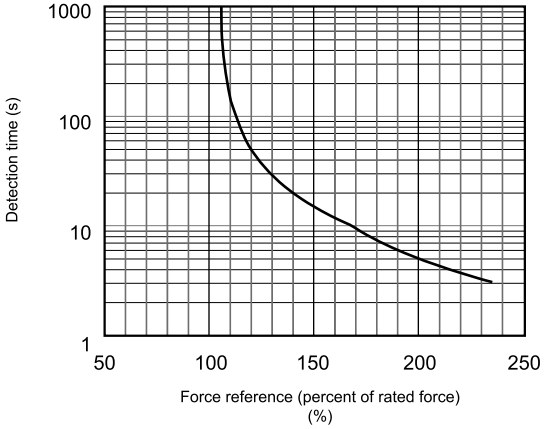
SGLFW2-30A120A and -230A



SGLFW2-45A, -90A□1, and -1DA□1



SGLFW2-90A□L



Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the servomotor so that the effective force remains within the continuous duty zone given in *Force-Motor Speed Characteristics on page 329*.

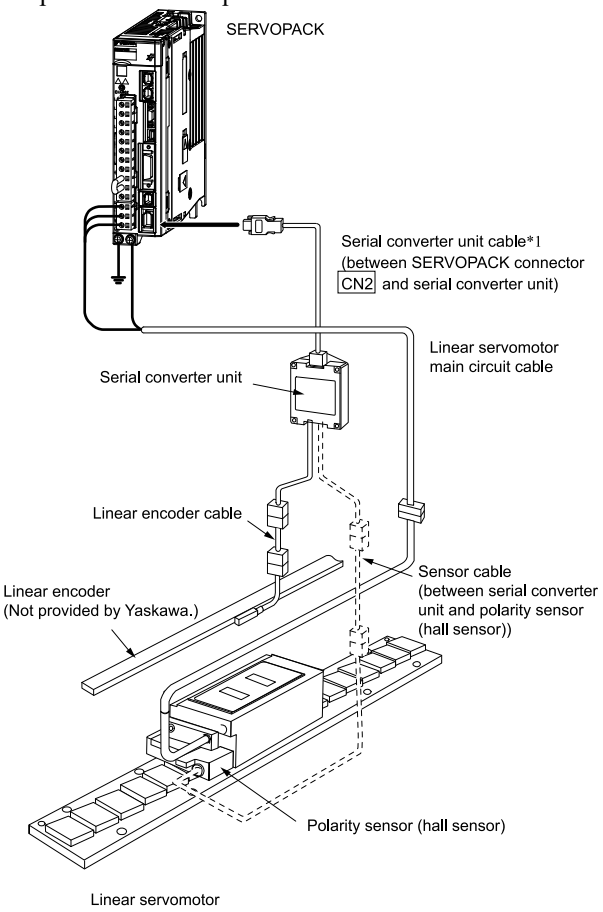
Selecting Cables

Cable Configurations

Refer to *Recommended Linear Encoders on page 382* to select a linear encoder.

Prepare the cable required for the encoder.



*1 You can connect directly to an absolute linear encoder.

Note:

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

Σ-X-Series AC Servo Deive Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

*1 The SGLTM-35□□□H (high-efficiency models) do not support this specification.

Note:

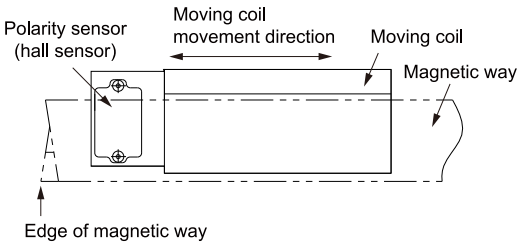
This information is provided to explain model numbers. It is not meant to imply that models are available for all combinations of codes.

Precautions on Moving Coils with Polarity Sensors (Hall Sensor)

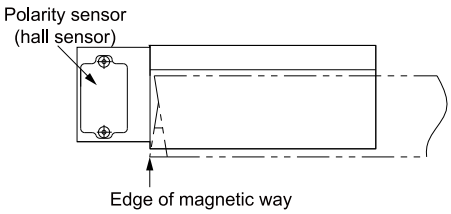
When you use a moving coil with a polarity sensor (hall sensor), the magnetic way must cover the bottom of the polarity sensor (hall sensor). Refer to the example that shows the correct installation.

When determining the length of the moving coil's stroke or the length of the magnetic way, consider the total length (L) of the moving coil and the polarity sensor (hall sensor). Refer to the following table.

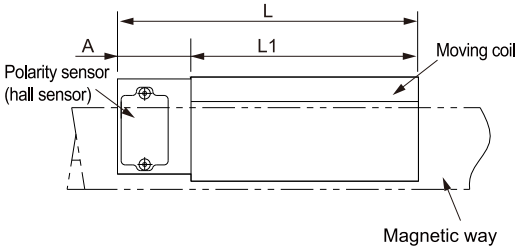
<Correct>



<Incorrect>



■ Total Length of Moving Coil with Polarity Sensor (Hall Sensor)



Moving Coil Model SGLTW-	Length of Moving Coil L1 [mm]	Length of Polarity Sensor (Hall Sensor) A [mm]	Total Length L [mm]

Combined Serial Converter Unit, JZDP-□□□□-		011	012	013	014	015	016	185	186	187	188	105	106	108	109
Applicable SERVOPACKs	SGDXS-	3R8A	7R6A	120A	5R5A	120A	180A	180A	330A	330A	550A	5R5A	120A	5R5A	120A
	SGDXW-	5R5A	7R6A	-	5R5A	-	-	-	-	-	-	5R5A	-	5R5A	-

*1 These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. The values for other items are at 20°C. These are typical values.

*2 The rated forces are the continuous allowable force values at a surrounding air temperature of 40°C with an aluminum heat sink of the dimensions given in the following table.
<Heat Sink Dimensions>

- 254 mm × 254 mm × 25 mm: SGLTW-20A170A, 35A170A
- 400 mm × 500 mm × 40 mm: SGLTW-20A320A, 20A460A, 35A170H, 35A320A, 35A320H, 35A460A, 50A170H
- 609 mm × 762 mm × 50 mm: SGLTW-40A400B, 40A600B, 50A320H, 80A400B, 80A600B

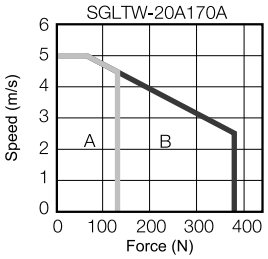
*3 The unbalanced magnetic gap that results from the moving coil installation condition causes a magnetic attraction on the moving coil.

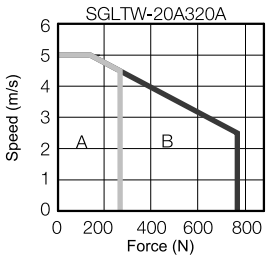
*4 The value that is given is the magnetic attraction that is generated on one side of the magnetic way.

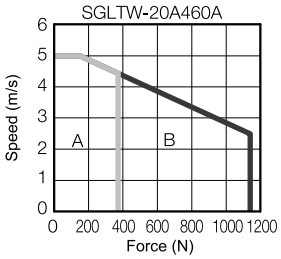
Force-Motor Speed Characteristics

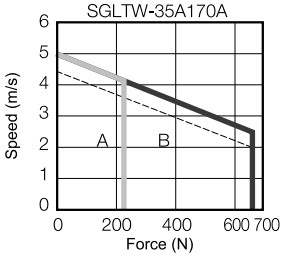
A : Continuous duty zone ———— (solid lines): With three-phase 200-V input
B : Intermittent duty zone - - - - - - - - (dotted lines): With single-phase 200-V input

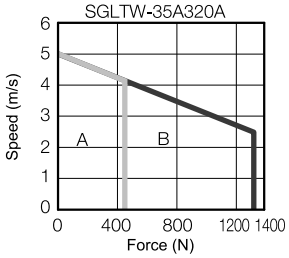
■ Standard Models

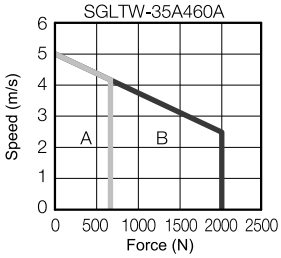


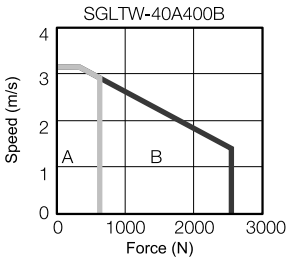


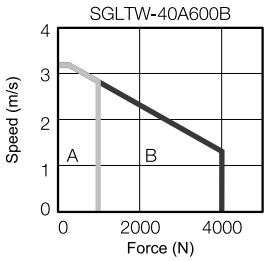


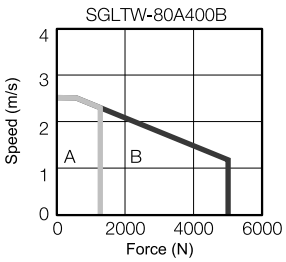


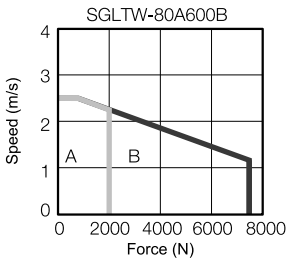








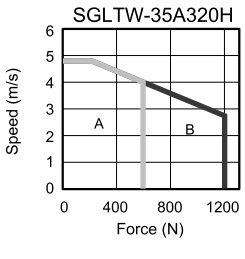


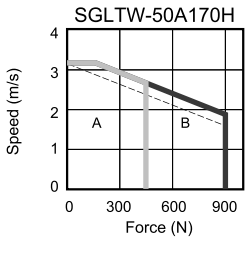


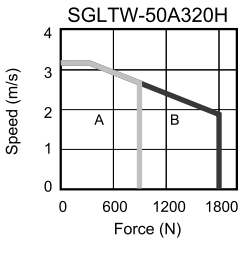
Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the servomotor can be used within the intermittent duty zone.
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

■ High-efficiency Models







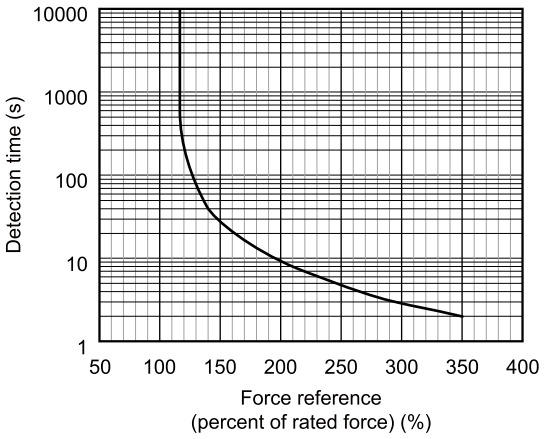
Note:

1. These values are for operation in combination with a SERVOPACK when the temperature of the armature winding is 100°C. These are typical values.
2. The characteristics in the intermittent duty zone depend on the power supply voltage.
3. If the effective force is within the allowable range for the rated force, the servomotor can be used within the intermittent duty zone.
4. If you use a servomotor main circuit cable that exceeds 20 m, the intermittent duty zone in the torque-motor speed characteristics will become smaller because the voltage drop increases.

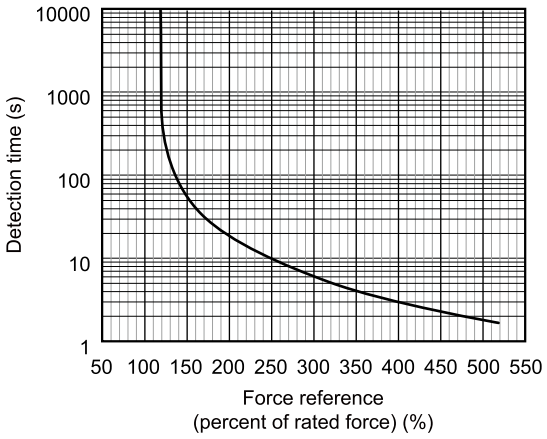
Servomotor Overload Protection Characteristics

The overload detection level is set for hot start conditions with a servomotor surrounding air temperature of 40°C.

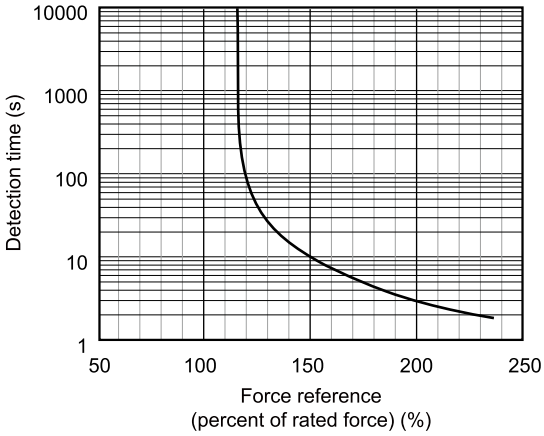
SGLTW-20A□□□A and 35A□□□A



SGLTW-40A□□□B and 80A□□□B



SGLTW-35A□□□H and 50A□□□H



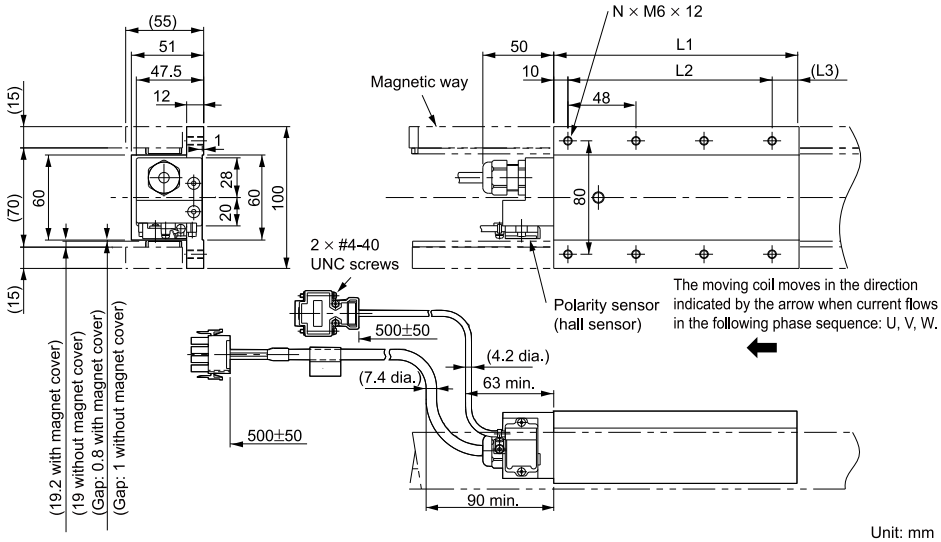
Note:

The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. Use the servomotor so that the effective force remains within the continuous duty zone given in *Force-Motor Speed Characteristics on page 357*.

External Dimensions

SGLTW-20: Standard Models

■ Moving Coils: SGLTW-20A□□□A□

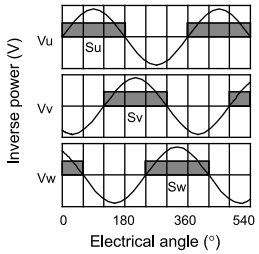


Unit: mm

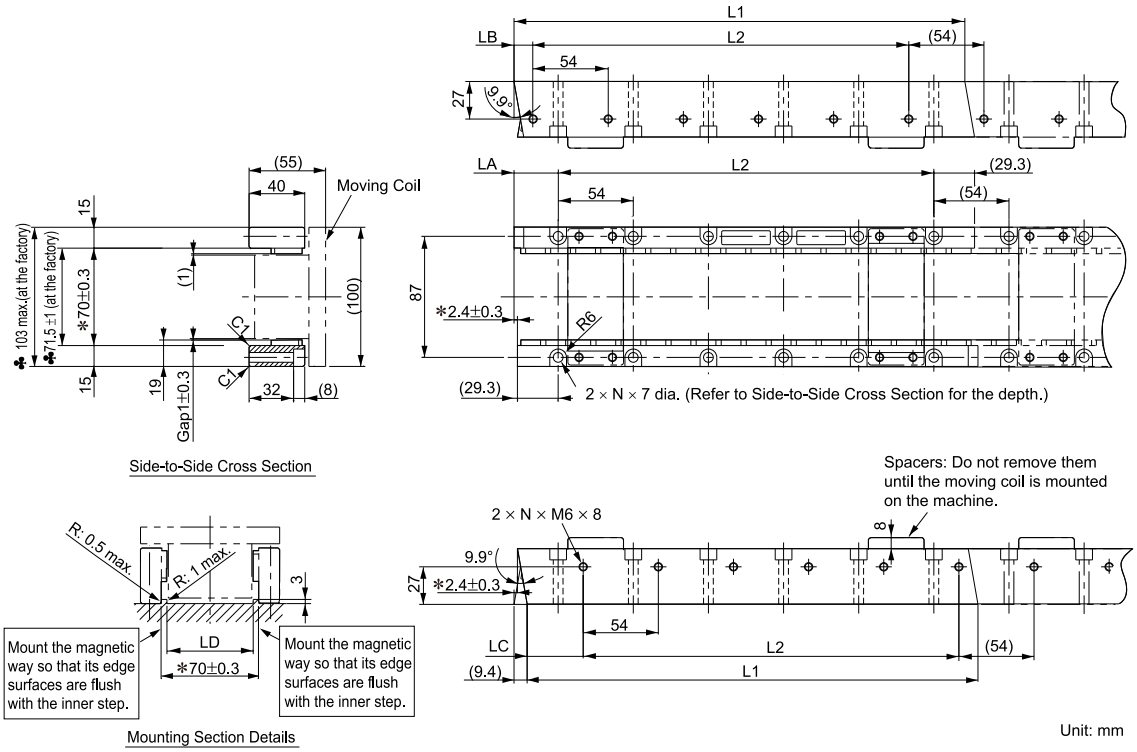
Moving Coil Model SGLTW-	L1	L2	(L3)	N	Approx. Mass [kg]
20A170A□	170	144 (48 × 3)	(16)	8	2.5
20A320A□	315	288 (48 × 6)	(17)	14	4.6
20A460A□	460	432 (48 × 9)	(18)	20	6.7

◆ Polarity Sensor (Hall Sensor) Output Signal

The figure on the right shows the relationship between the Su, Sv, and Sw polarity sensor (hall sensor) output signals and the inverse power of each motor phase Vu, Vv, and Vw when the moving coil moves in the direction indicated by the arrow in the dimensional drawings of the moving coil.



■ Magnetic Ways: SGLTM-20□□□A



Note:

1. Two magnetic way tracks are used together as a set. For safety, when they are shipped, the two tracks are secured to a mounting spacer made from aluminum.
2. More than one magnetic way can be connected.
3. Dimensions with asterisks are the distances between the magnetic way tracks. Install the tracks according to the specified dimensions. Observe the dimensions given in mounting section details after installation. Dimensions when the magnetic way is shipped from the factory are indicated by ♣.
4. Use socket head screws of strength class 10.9 or higher for the magnetic way mounting screws. (Do not use stainless steel screws.)

Magnetic Way Model SGLTM-	L1	L2	LA	LB	LC	LD	N	Approx. Mass [kg]
20324A□	$324^{-0.1}_{-0.3}$	270 (54 × 5)	$31.7^{0}_{-0.2}$	$13.7^{0}_{-0.2}$	$40.3^{0}_{-0.2}$	$62^{+0.6}_{0}$	6	3.4

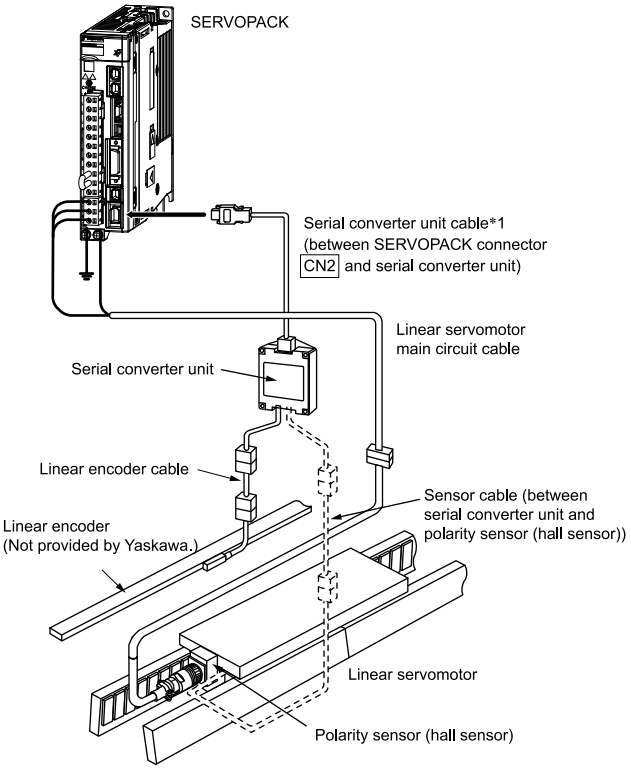
Selecting Cables

Equipment Configurations

Refer to *Recommended Linear Encoders on page 382* to select a linear encoder.
Prepare the cable required for the encoder.



*1 You can connect directly to an absolute linear encoder.

Note:

Refer to the following manual for the following information.

- Cable dimensional drawings and cable connection specifications
- Order numbers and specifications of individual connectors for cables
- Order numbers and specifications for wiring materials

Σ-X-Series AC Servo Deive Peripheral Device Selection Manual (Manual No.: SIEP C710812 12)

*1 You must also use a Yaskawa serial converter unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the serial converter unit.
*2 The multiplier (number of divisions) depends on the linear encoder. Also, you must write the servomotor constant file to the linear encoder in advance.
*3 The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a Yaskawa SERVOPACK. The actual speed will be restricted by either the maximum speed of the linear servomotor or the maximum speed of the linear encoder (given above).
*4 If you use the origin signals with a linear encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.
*5 This is the model of the serial converter unit.
*6 This is the model of the sensor head with interpolator.
*7 This is the model of the interpolator.
*8 Contact your Yaskawa representative.

Note:

Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the linear encoder before you use it.

Absolute Linear Encoders

The output signal is compatible with the Yaskawa serial interface. The multiplier (number of divisions) depends on the linear encoder. Also, you must write the servomotor constant file to the linear encoder in advance.

*1 These are reference values for setting SERVOPACK parameters. Contact the manufacturer for actual linear encoder scale pitches.
*2 The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a Yaskawa SERVOPACK. The actual speed will be restricted by either the maximum speed of the linear servomotor or the maximum speed of the linear encoder (given above).
*3 Contact Mitutoyo Corporation for details on the linear encoders.
*4 The speed is restricted for some SERVOPACKs.

Note:

Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the linear encoder before you use it.

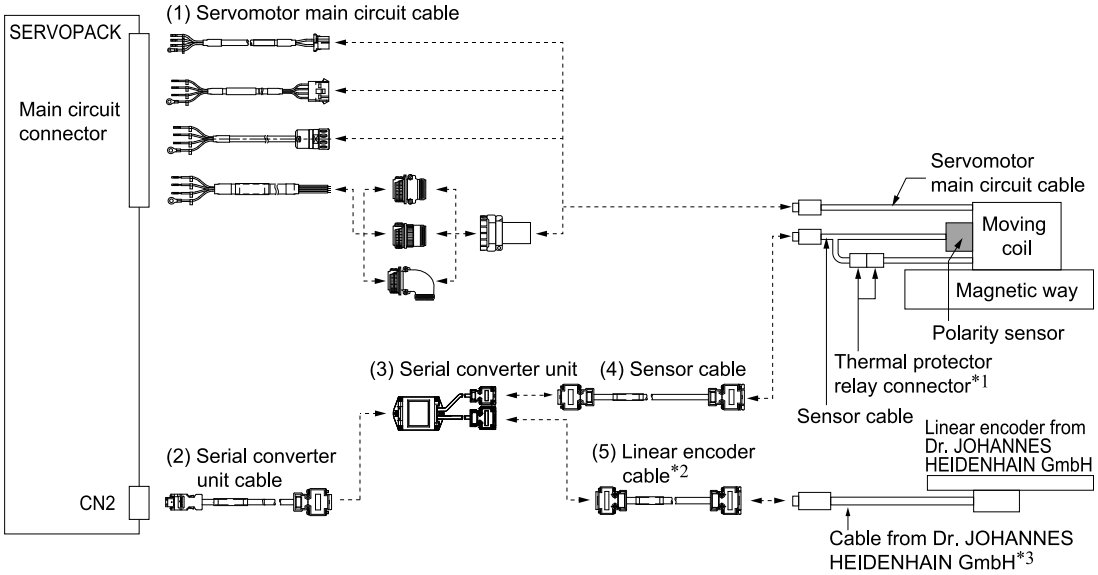
Cable Configurations

Connections to Linear Encoder from Dr. JOHANNES HEIDENHAIN GmbH

■ Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa serial converter unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the serial converter unit.

◆ Connecting to a Linear Servomotor with a Polarity Sensor

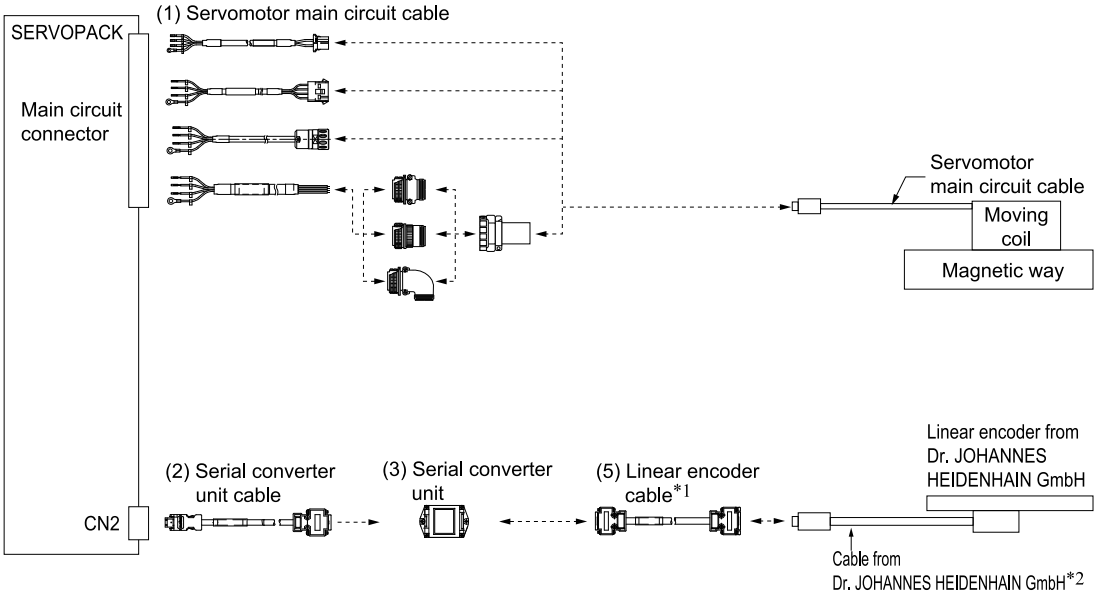


*1 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.
*2 When using a JZDP-J00□-□□□ serial converter unit, do not use a Yaskawa linear encoder cable that is longer than 3 m.
*3 Contact Dr. JOHANNES HEIDENHAIN GmbH for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Dr. JOHANNES HEIDENHAIN GmbH.

No.	Cable Type	Reference
(1)	Servomotor Main Circuit Cables	405
(2)	Serial Converter Unit Cables	407
(3)	Serial Converter Unit	418
(4)	Sensor Cables	408
(5)	Linear Encoder Cables	407

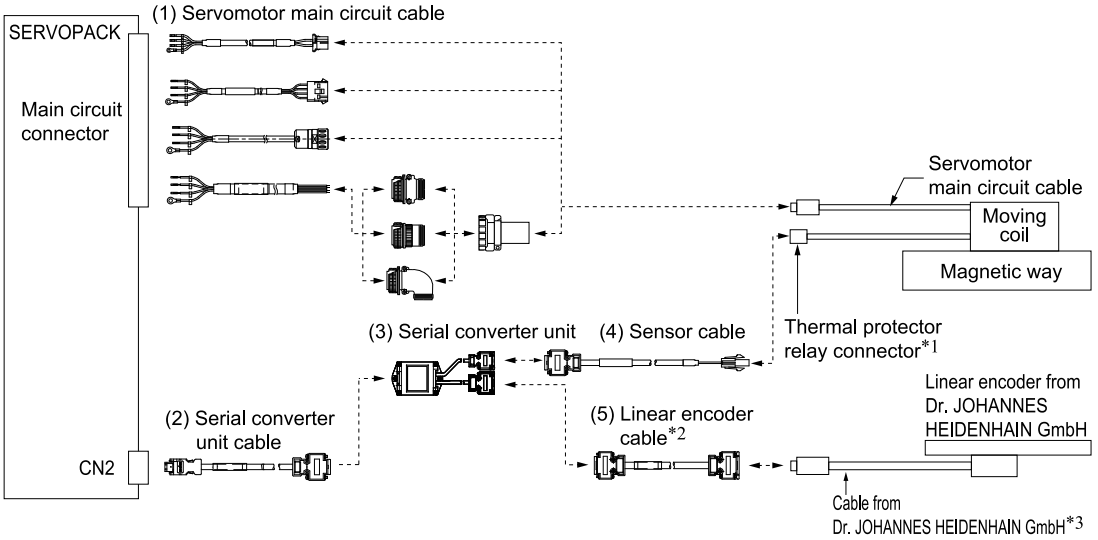
◆ Connecting to a Linear Servomotor without a Polarity Sensor

○ Servomotors Other Than the SGLFW2



*1 When using a JZDP-J00□-□□□ serial converter unit, do not use a Yaskawa linear encoder cable that is longer than 3 m.
*2 Contact Dr. JOHANNES HEIDENHAIN GmbH for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Dr. JOHANNES HEIDENHAIN GmbH.

○ SGLFW2 Servomotors



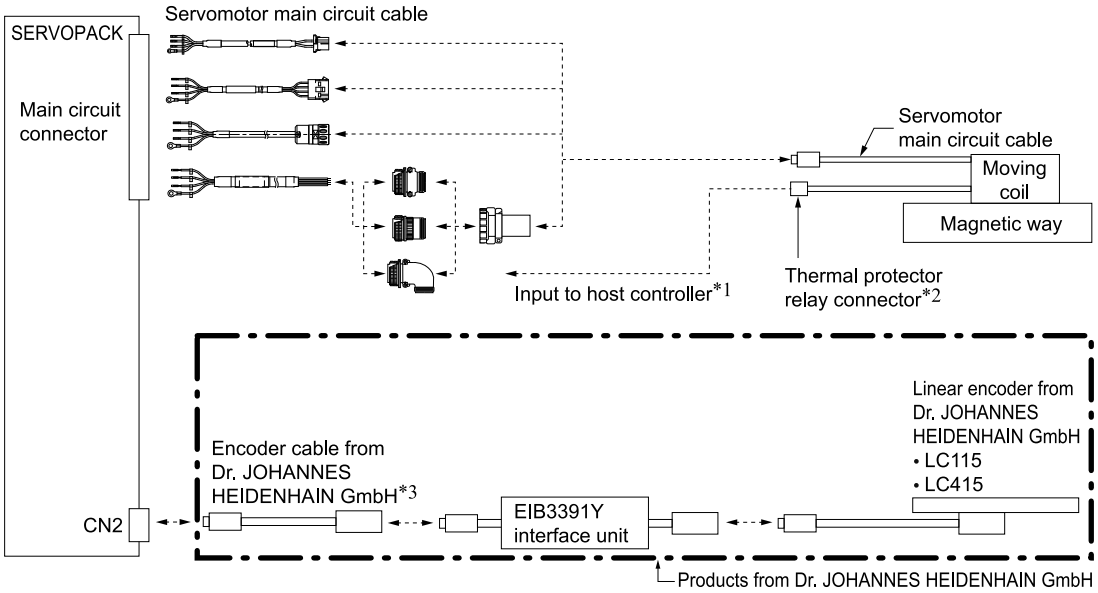
*1 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.
*2 When using a JZDP-J00□-□□□ serial converter unit, do not use a Yaskawa linear encoder cable that is longer than 3 m.
*3 Contact Dr. JOHANNES HEIDENHAIN GmbH for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Dr. JOHANNES HEIDENHAIN GmbH.

No.	Cable Type	Reference
(1)	Servomotor Main Circuit Cables	405
(2)	Serial Converter Unit Cables	407
(3)	Serial Converter Unit	418
(4)	Sensor Cables	408
(5)	Linear Encoder Cables	407

■ LC115 or LC415 Linear Encoder with EIB3391Y Interface Unit

Important

1. You cannot use an LC115 or LC415 linear encoder with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

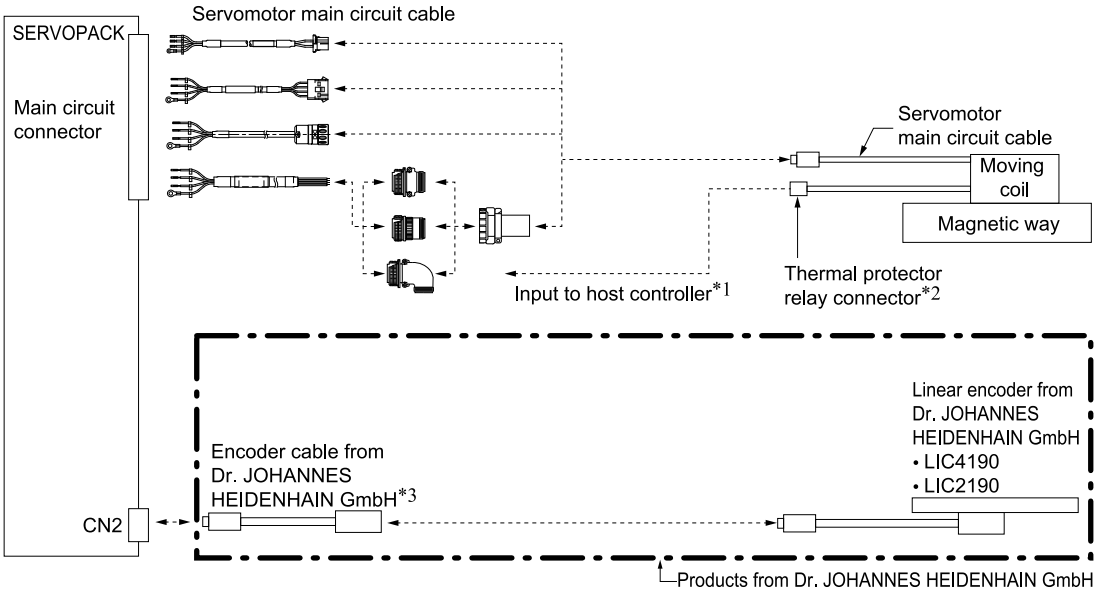
*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

*3 Use an encoder cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed encoder cable specifications.

■ Linear Encoder LIC4190/LIC2190

Important

1. You cannot use an LIC4190 or LIC2190 linear encoder together with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

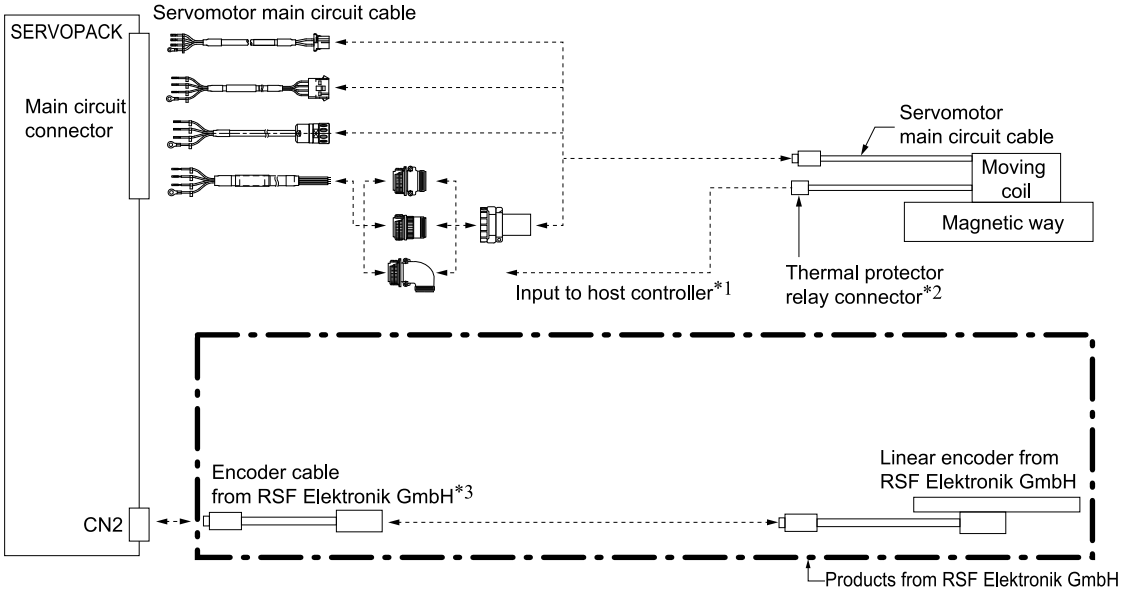
*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

*3 Use an encoder cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed encoder cable specifications.

Connections to Linear Encoder from RSF Elektronik GmbH

Important

1. You cannot use a linear encoder from RSF Elektronik GmbH together with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

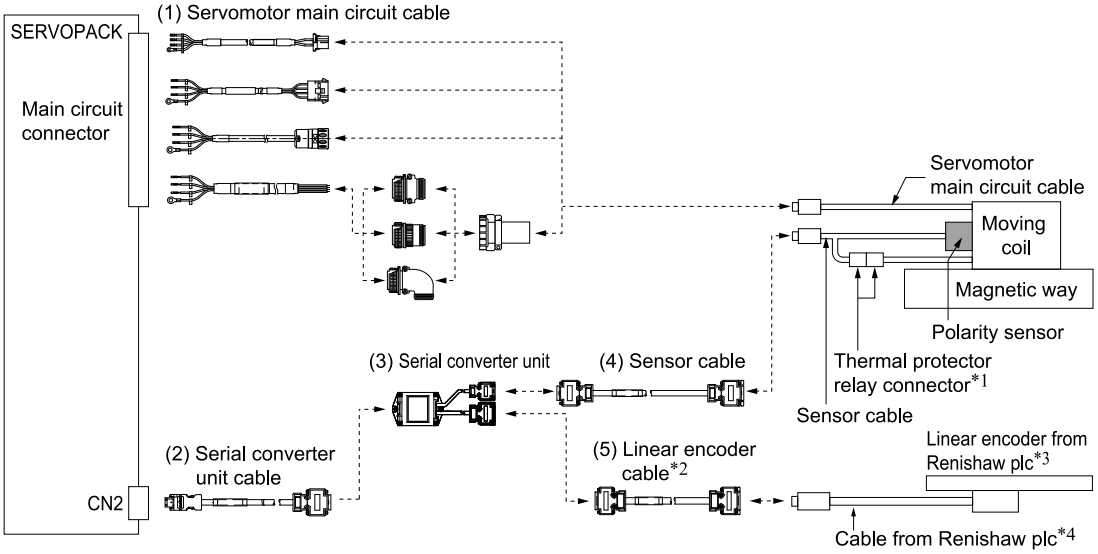
*3 Use an encoder cable from RSF Elektronik GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed encoder cable specifications.

Connections to Linear Encoder from Renishaw plc

■ Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa serial converter unit. The output signal will be multiplied by 8 bits (256 divisions) or 12 bits (4,096 divisions) in the serial converter unit.

◆ Connecting to a Linear Servomotor with a Polarity Sensor

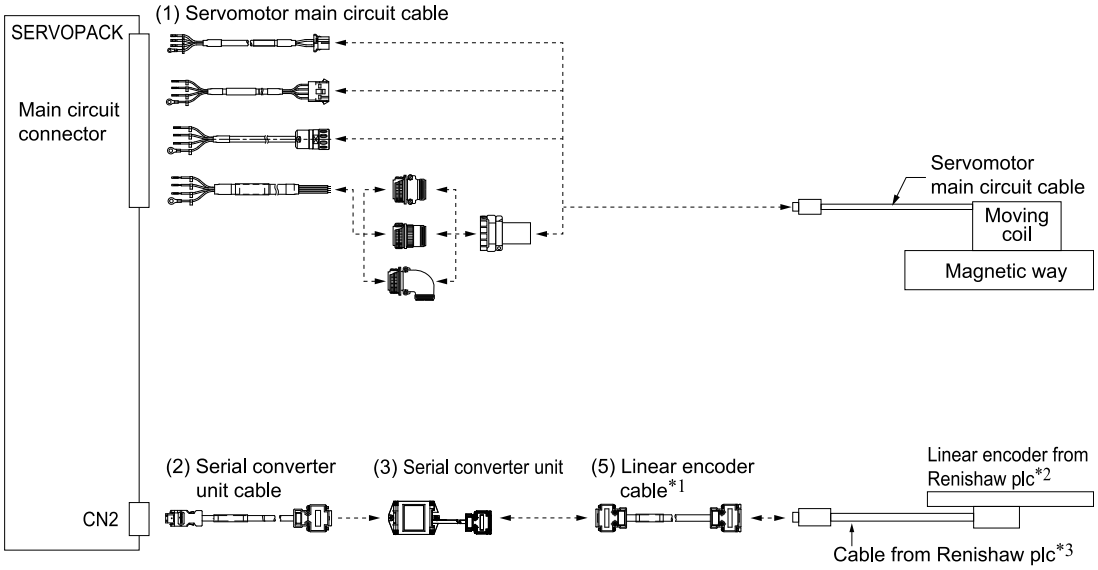


*1 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.
*2 When using a JZDP-J00□-□□□ serial converter unit, do not use a Yaskawa linear encoder cable that is longer than 3 m.
*3 If you use the origin signals with a linear encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.
*4 Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc. However, the BID and DIR signals are not connected. However, the BID and DIR signals are not connected.

No.	Cable Type	Reference
(1)	Servomotor Main Circuit Cables	405
(2)	Serial Converter Unit Cables	407
(3)	Serial Converter Unit	418
(4)	Sensor Cables	408
(5)	Linear Encoder Cables	407

◆ Connecting to a Linear Servomotor without a Polarity Sensor

○ Servomotors Other Than the SGLFW2

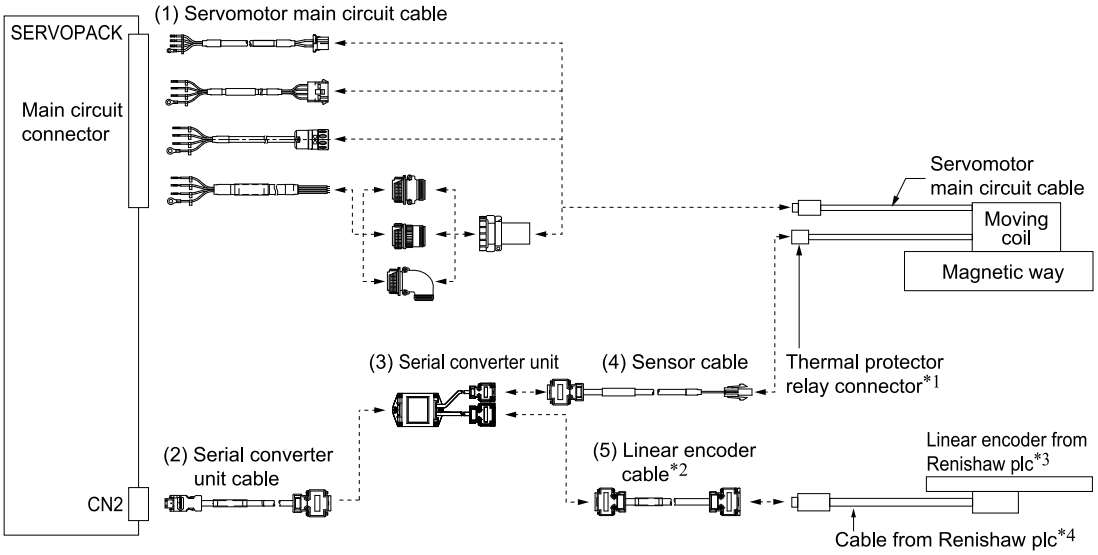


*1 When using a JZDP-J00□-□□□ serial converter unit, do not use a Yaskawa linear encoder cable that is longer than 3 m.

*2 If you use the origin signals with a linear encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

*3 Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc. However, the BID and DIR signals are not connected. However, the BID and DIR signals are not connected.

○ SGLFW2 Servomotors



*1 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.
*2 When using a JZDP-J00□-□□□ serial converter unit, do not use a Yaskawa linear encoder cable that is longer than 3 m.
*3 If you use the origin signals with a linear encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.
*4 Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc. However, the BID and DIR signals are not connected.

No.	Cable Type	Reference

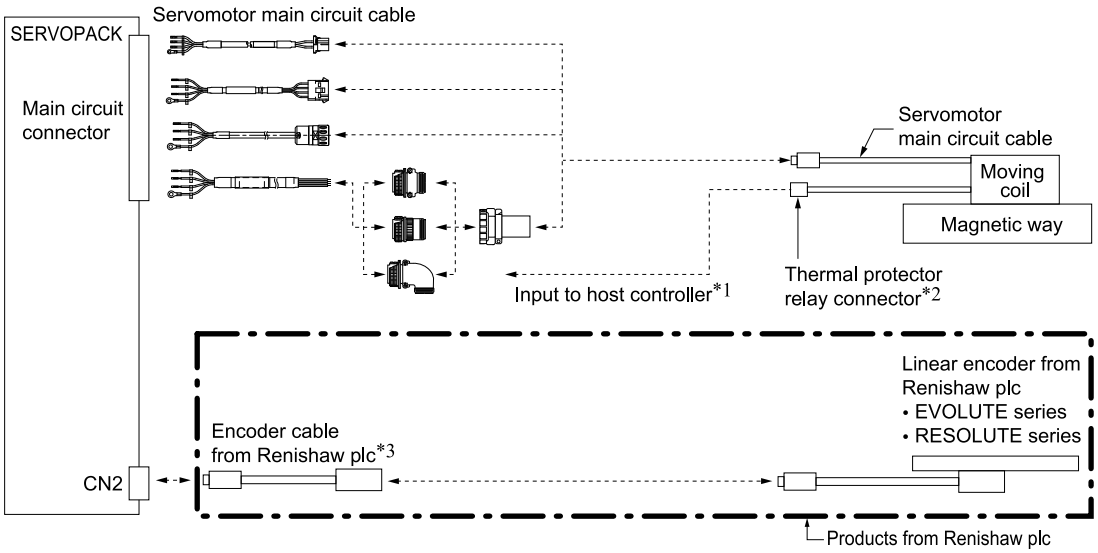
(2)	Serial Converter Unit Cables	407
(3)	Serial Converter Unit	418
(4)	Sensor Cables	408
(5)	Linear Encoder Cables	407

◆ EVOLUTE-Series Linear Encoder (model: EL36Y□□□□□□□□□), RESOLUTE-Series Linear Encoder (model: RL36Y□□□□□□□□)

Important

1. You cannot use an EVOLUTE-series or RESOLUTE-series linear encoder together with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

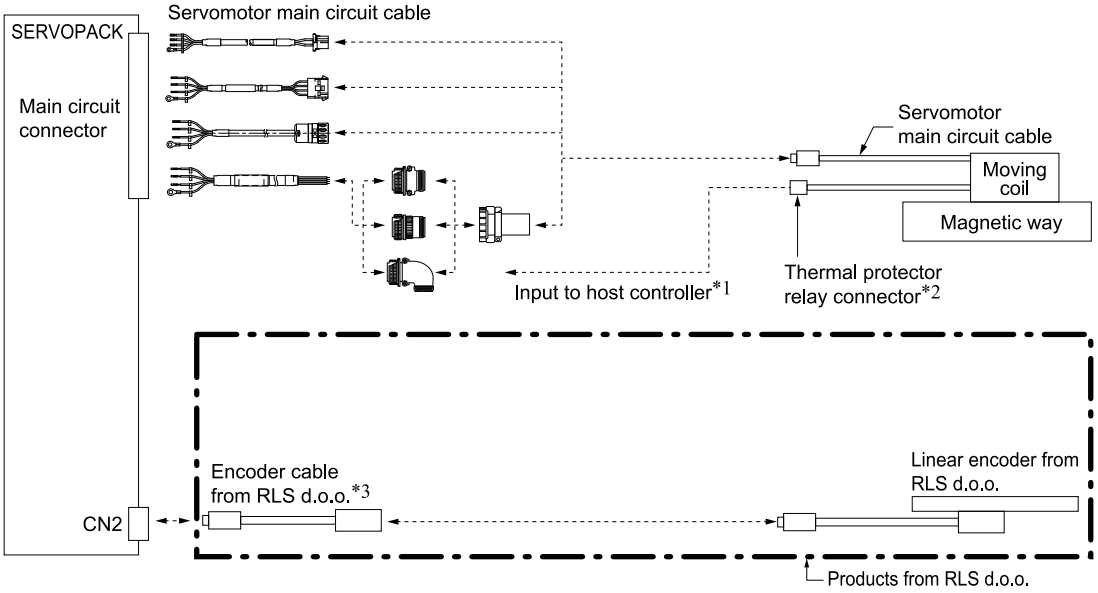
*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

*3 Use an encoder cable from Renishaw plc. Contact Renishaw plc for detailed encoder cable specifications.

Connections to Linear Encoder from RLS d.o.o.

Important

1. You cannot use a linear encoder from RLS d.o.o. together with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

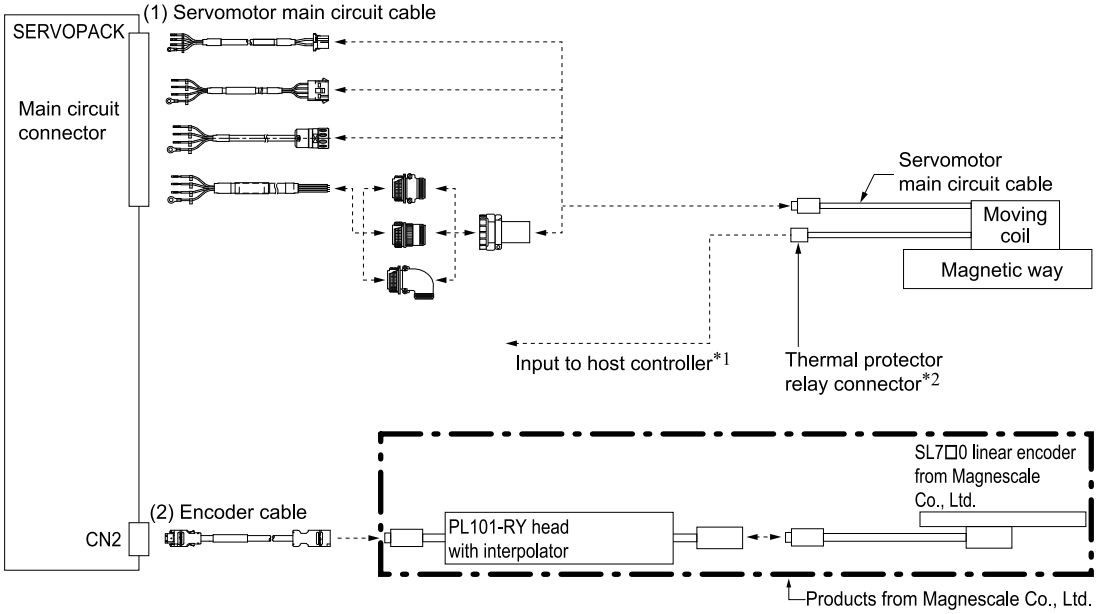
*3 Use an encoder cable from RLS d.o.o. Contact RLS d.o.o. or Renishaw plc for detailed encoder cable specifications.

Connections to Linear Encoder from Magnescale Co., Ltd.

■ SL7□0 Linear Encoder and PL101-RY Sensor Head with Interpolator

Important

1. You cannot use a PL101-RY sensor head with an interpolator together with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

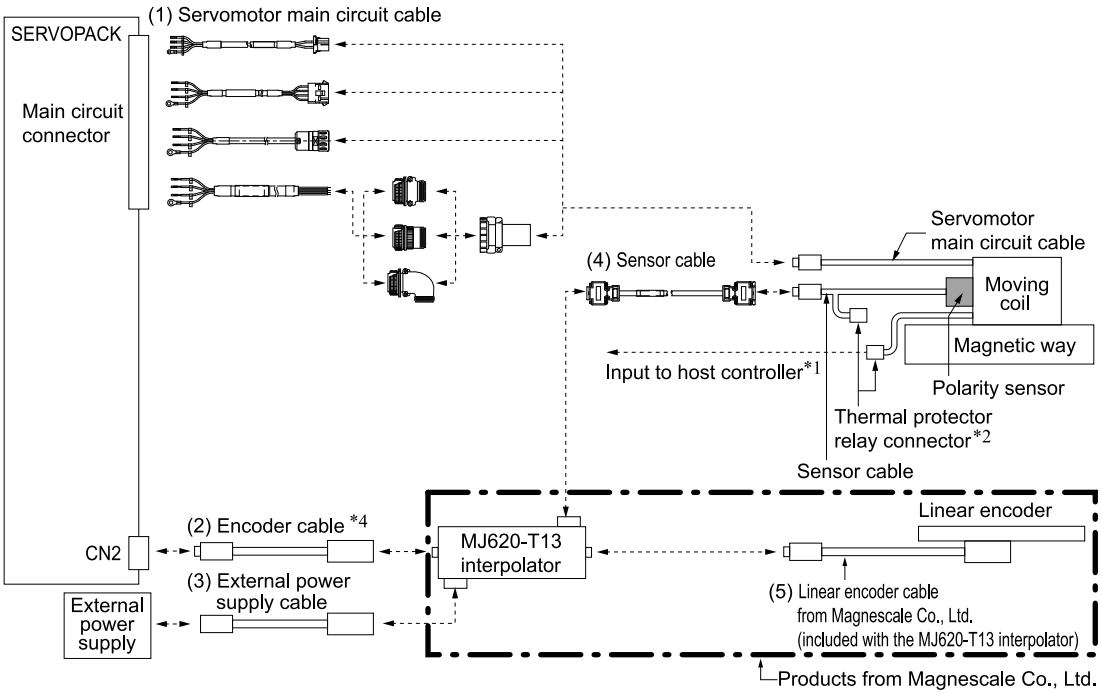
*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

No.	Cable Type	Reference
(1)	Servomotor Main Circuit Cables	405
(2)	Encoder Cables	409

■ SL7□0 Linear Encoder, PL101 Sensor Head, and MJ620-T13 Interpolator

Important

1. A 5-VDC power supply is required for the MJ620-T13. (The 5-VDC power supply is not provided by Yaskawa.)
2. Refer to the MJ620-T13 specifications from Magnescale Co., Ltd. for the current consumption of the MJ620-T13.
3. If you use an SGLFW2 servomotor, remove the thermal protector relay connector and input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

	20 m	JZSP-CMP09-20-E	JZSP-CSP39-20-E

Note:

We recommend that you use flexible cables.

◆ External Power Supply Cables

This cables are not provided by Yaskawa. Refer to the table on the right for the pin layout.

For details, refer to the specifications for the MJ620-T13 from Magnescale Co., Ltd..

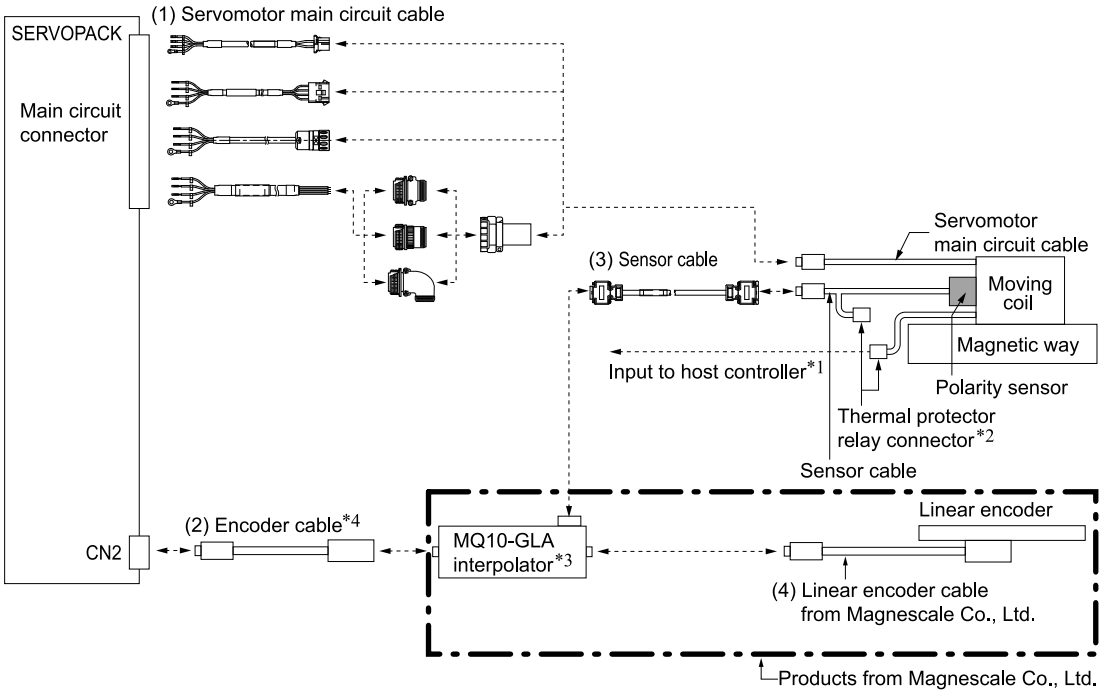
- Connector header: MC1.5/2-GF-3.81 (Phoenix Contact)
- Connector plug: MC1.5/2-STF-3.81 (Phoenix Contact)

Pin No.	Signal	Function
1	+5 V	+5 V
2	0 V	0 V

■ SmartSCALE Linear Encoder (SQ10 Scale and MQ10-□LA Interpolator)

Important

If you use an SGLFW2 servomotor, remove the thermal protector relay connector and input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

*3 The above diagram shows the connections when a MQ10-GLA interpolator (equipped with an electromagnetic sensor input) is used.

*4 The maximum length of the encoder cable is 15 m.

No.	Cable Type		Reference
(1)	Servomotor Main Circuit Cables		405
(2)	Encoder Cables	These cables are not provided by Yaskawa.	400
(3)	Sensor Cables		408
(4)	Linear Encoder Cables	Use the cables that come with the MQ10-□LA interpolator. For details, refer to the specifications for the MQ10-□LA interpolator.	–

◆ Encoder Cables

These cables are not provided by Yaskawa. Use a shielded cable. Refer to the following tables for the pin layouts.

○ SERVOPACK End of Cable (CN2)

	15 m	JZSP-CMP09-15-E	JZSP-CSP39-15-E

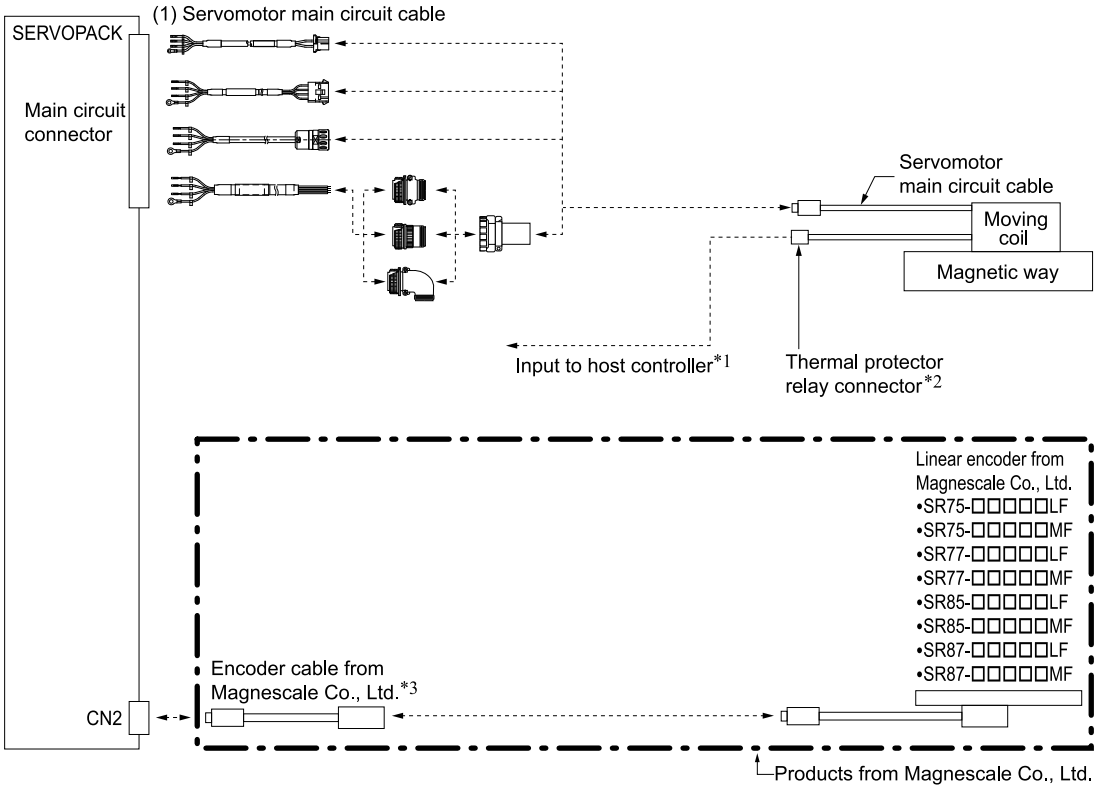
Note:

We recommend that you use flexible cables.

■ SR-75, SR-77, SR-85, or SR-87 Linear Encoders

Important

1. You cannot use an SR-75, SR-77, SR-85, or SR-87 linear encoder with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

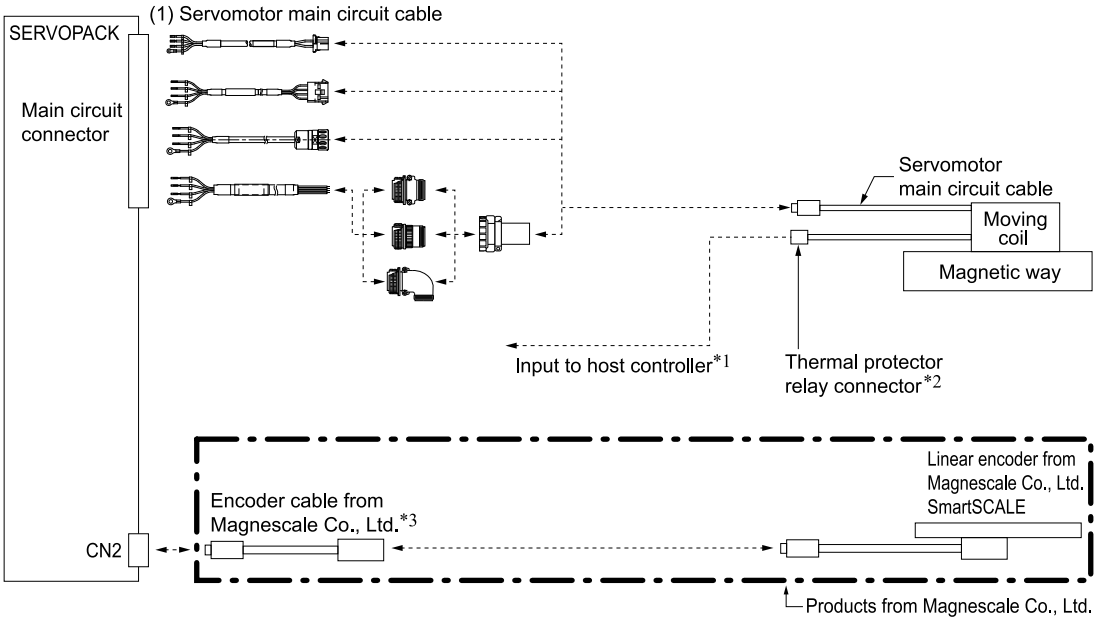
*3 Use an encoder cable from Magnescale Co., Ltd.. Contact Magnescale Co., Ltd. for details on encoder cable specifications.

No.	Cable Type	Reference
(1)	Servomotor Main Circuit Cables	405

■ SmartSCALE Linear Encoder (SQ47 or SQ57)

Important

1. You cannot use an SQ47 or SQ57 linear encoder with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

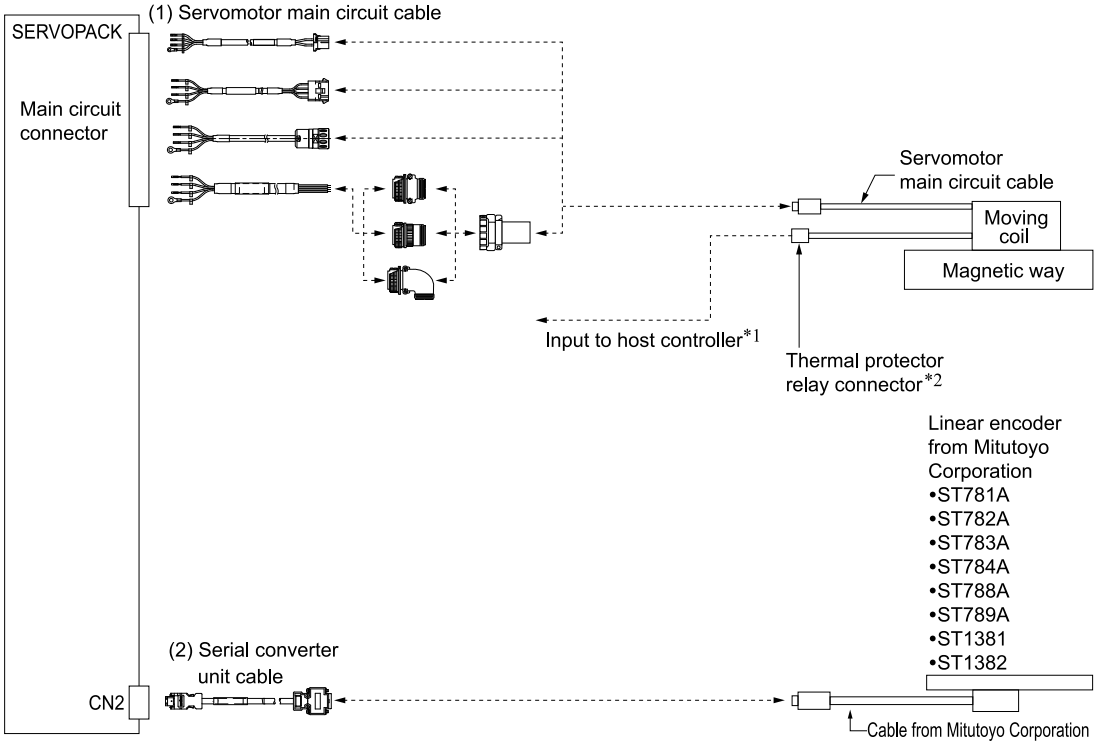
*3 Use an encoder cable from Magnescale Co., Ltd.. Contact Magnescale Co., Ltd. for details on encoder cable specifications.

No.	Cable Type	Reference
(1)	Servomotor Main Circuit Cables	405

Connections to Linear Encoders from Mitutoyo Corporation

Important

1. You cannot use an ST78□A linear encoder with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

No.	Cable Type	Reference

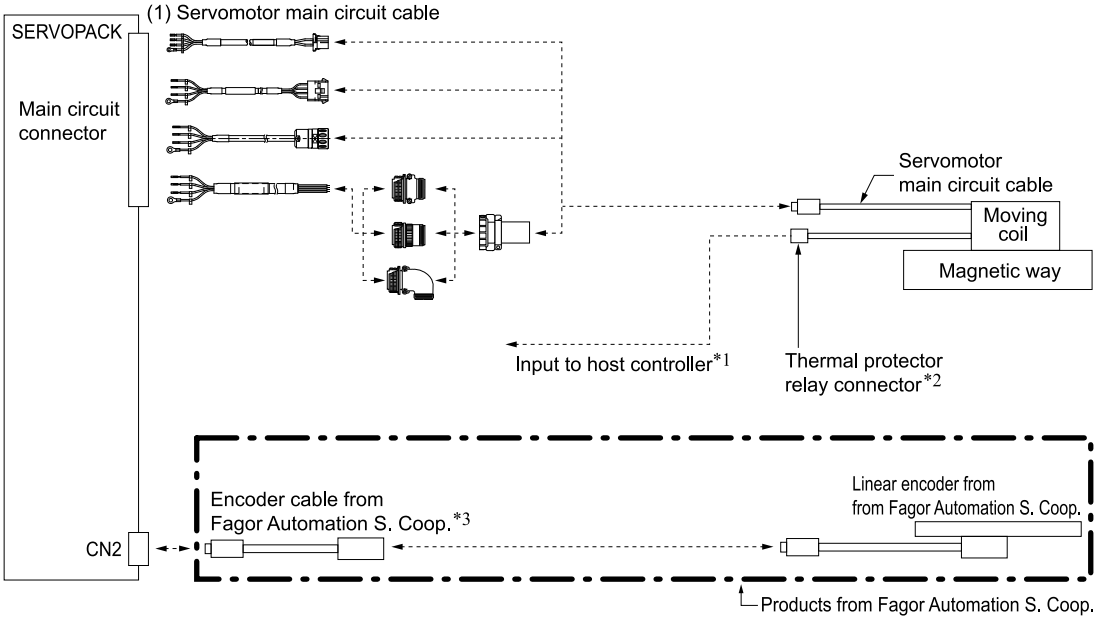
Connections to Linear Encoder from Fagor Automation S. Coop.

Important

1. You cannot use an linear encoder from Fagor Automation S. Coop. with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

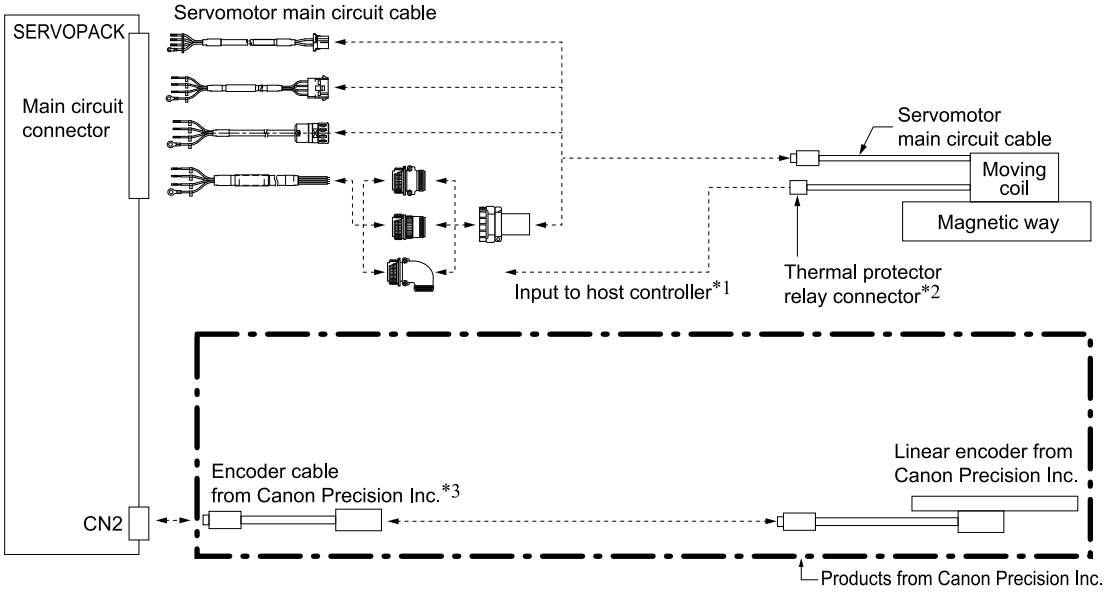
*3 Use encoder cables from Fagor Automation S. Coop. For detailed specifications of the encoder cables, consult Fagor Automation S. Coop. or its sales representative.

No.	Cable Type	Reference
(1)	Servomotor Main Circuit Cables	405

Connections to Linear Encoder from Canon Precision Inc.

Important

1. You cannot use a linear encoder from Canon Precision Inc. together with a linear servomotor with a polarity sensor.
2. If you use an SGLFW2 servomotor, input the thermal protector signal from the linear servomotor to the host controller. The thermal protector signal is closed when the temperature is normal and open when the thermal protector is activated. Do not exceed 3 A or 30 V.



*1 Cables to connect to the host controller are not provided by Yaskawa.
Refer to the following section for information on connector models.
☞ *JZSP-CL2TH00-□□-E Sensor Cables on page 415*

*2 Only SGLFW2 servomotors come equipped with thermal protector relay connectors.

*3 Use encoder cables from Canon Precision Inc. Contact Canon Precision Inc. for detailed encoder cable specifications.

5	Red/light blue
6	Black/light blue
7	FG shield wire

Note:

Always connect the shield wire from the encoder cable to the connector case (shell).

Wiring Precautions

■ Precautions for Standard Cables

Do not use standard cables in applications that require a high degree of flexibility, such as twisting and turning, or in which the cables themselves must move. When you use standard cables, observe the recommended bending radius given in the following table and perform all wiring so that stress is not applied to the cables. Use the cables so that they are not repeatedly bent.

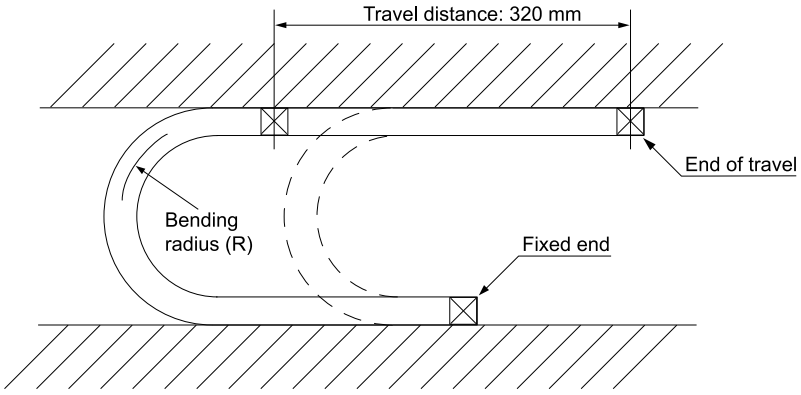
Cable Diameter	Recommended Bending Radius (R)
Less than 8 mm	15 mm min.
8 mm	20 mm min.
Over 8 mm	Cable diameter × 3 mm min.

■ Precautions for Flexible Cables

The flexible cables have a service life of 10,000,000 operations minimum when used at the recommended bending radius (R) or larger under the following test conditions. The service life of a flexible cable is reference data under the following test conditions. The service life of a flexible cable greatly depends on the amount of mechanical shock, how the cable is attached, and how the cable is secured.

◆ Test Conditions

- One end of the cable is repeatedly moved forward and backward for 320 mm using the test equipment shown in the following figure.
- The fixed end is connected to a non-moving part, the moving end is connected to the moving part, and the number of cable return operations until a lead wire breaks are counted. One round trip is counted as one bend.



Note:

The service life of a flexible cable indicates the number of bends while the lead wires are electrically charged for which no cracks or damage that affects the performance of the cable sheathing occurs.

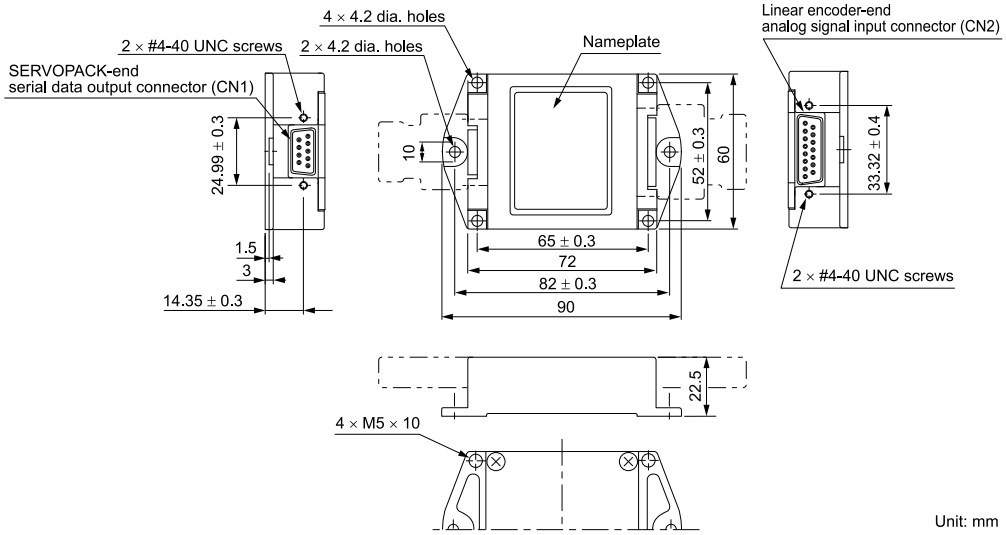
Environment	Surrounding Air Temperature	0°C to 55°C	
	Storage Temperature	-20°C to 80°C	
	Surrounding Air Humidity/Storage Humidity	20% to 90% relative humidity (with no condensation)	

*1 The current consumptions of the linear encoder and the polarity sensor are not included in this value. The current consumption of the polarity sensor is approximately 40 mA. Confirm the current consumption of the linear encoder that you will use and make sure that the current capacity of the SERVOPACK is not exceeded.
*2 If you input an out-of-range value, the correct position information will not be output. Also, the device may be damaged.
*3 Only SGLFW2 servomotors come equipped with thermal protectors.

External Dimensions

■ Serial Converter Unit without Polarity Sensor Cable (for linear encoder from Dr. JOHANNES HEIDENHAIN GmbH)

◆ Model: JZDP-□003-□□□



Unit: mm

Pin No.	Signal
1	+ 5 V
2	Phase-S output

3. Use the linear encoder connector to change the origin position specifications of the linear encoder.
4. The phase U, V, and W inputs are internally pulled up with 10 kΩ.

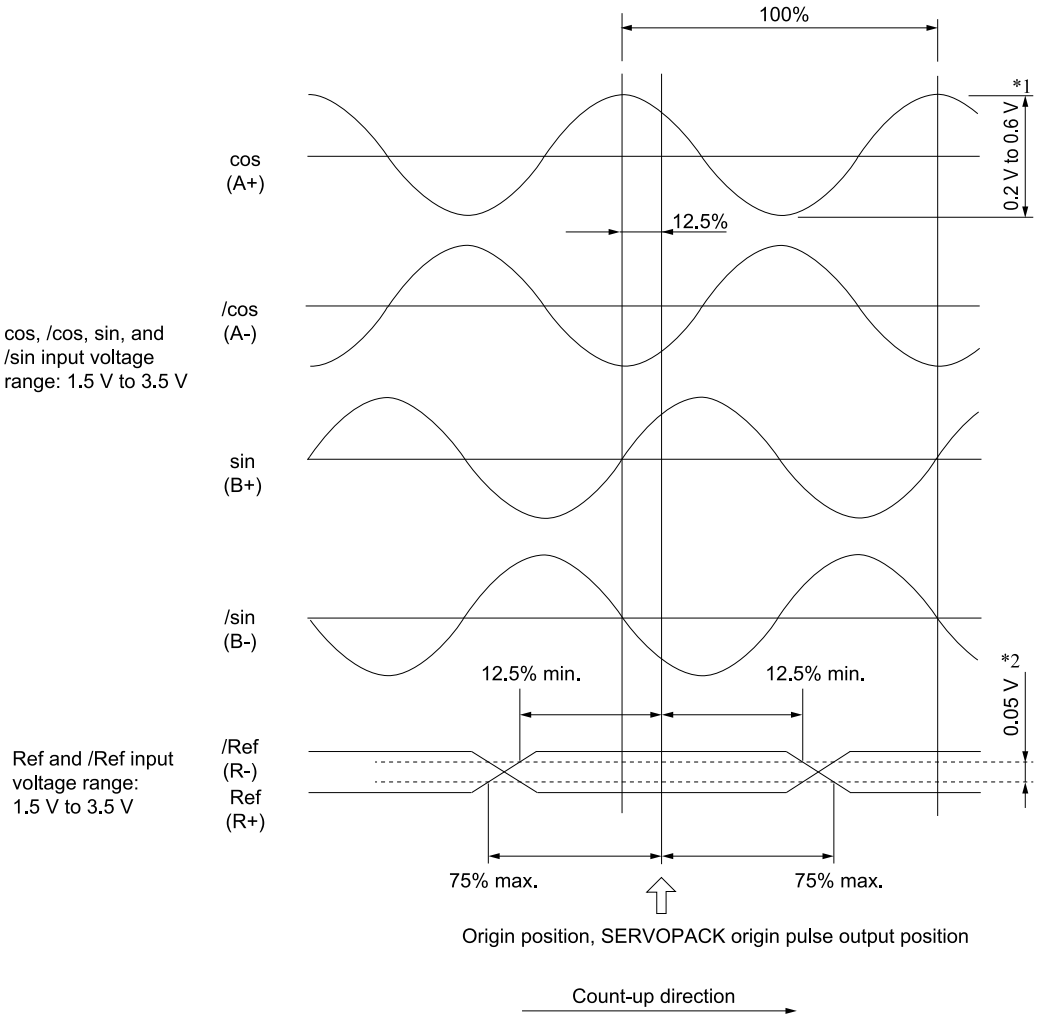
Analog Signal Input Timing

Input the analog signals with the timing shown in the following figure.

The /cos and /sin signals are the differential signals when the cos and sin signals are shifted 180°. The specifications of the cos, /cos, sin, and /sin signals are identical except for the phases.

The Ref and /Ref signals are input to the comparator. Input a signal that will exceed the hysteresis of the comparator (i.e., the broken lines in the following figure).

When they are crossed, the output data will be counted up.



*1 If the analog signal amplitude declines to approximately 0.35 V because of the differential amplitude, the serial converter unit will output an alarm.
*2 This is the hysteresis width.

Important

Application Precautions

1. Never perform insulation resistance or withstand voltage tests.
2. When analog signals are input to the serial converter unit, they are very weak signals, and therefore noise influence on the analog signals affects the unit's ability to output correct position information. Keep the analog signal cable as short as possible and implement proper shielding.
3. Use the serial converter unit in a location without gases such as H_2S.
4. Do not replace the unit while power is being supplied. There is a risk of device damage.
5. If you use more than one axis, use a shielded cable for each axis.
   Do not use one shielded cable for multiple axes.
6. If you use any linear encoder other than a recommended linear encoder, evaluate the system in advance before you use it.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

A.710 or A.720 (an overload alarm) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the servomotor.

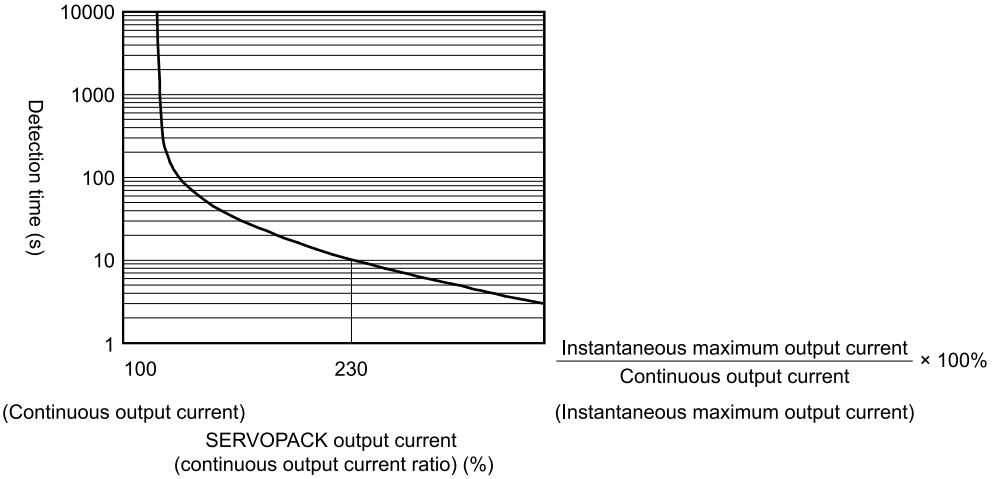

Figure .1 SGDXS-R70A, -R90A, -1R6A, -2R8A

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

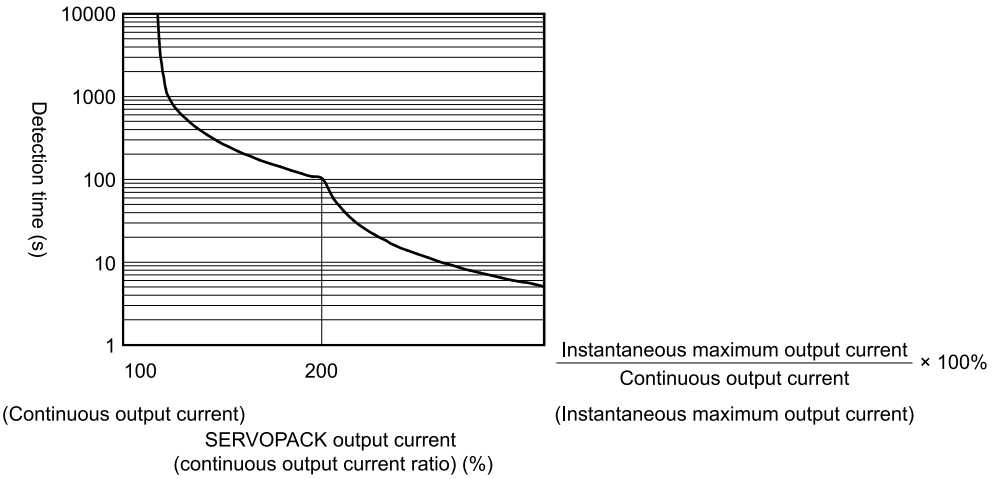

Figure .2 SGDXS-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, -780A

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

Specification

■ Environmental Conditions

Item	Specification
Surrounding Air Temperature	-5°C to 55°C (With derating, usage is possible between 55°C and 60°C.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 438*
Storage Temperature *1	-20°C to 85°C
Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)
Storage Humidity	95% relative humidity max. (with no freezing or condensation)
Vibration Resistance	When there is continuous vibration: 10 Hz to 55 Hz, acceleration amplitude 5.9 m/s^2 (0.6G)
Impact Resistance	19.6 m/s^2
Degree of Protection	IP20: Models SGDXS-R70A, -R90A, -1R6A, -2R8A, -3R8A, -5R5A, -7R6A, -120A IP10: Models SGDXS-180A, -200A, -330A, -470A, -550A, -590A, -780A
Pollution Degree	2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
Altitude *1	1000 m max. (With derating, usage is possible between 1000 m and 2000 m.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 438*
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity

*1 If you combine a Σ-X-series SERVOPACK with a Σ-V-series option module, the following Σ-V-series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1000 m max. Also, the applicable surrounding range cannot be increased by derating.

■ I/O Signals

Item	Specification
Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
Overheat Protection Input	Number of input points: 1 Input voltage range: 0 V to +5 V

Continued on next page.

Continued from previous page.

Item		Specification
Sequence Input Signals	Fixed Input	Allowable voltage range: 5 VDC ±5% Number of input points: 1 (input method: sink inputs or source inputs)
		Input signal: SEN (Absolute Data Request Input) signal
	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 (input method: sink inputs or source inputs)
		Input signals: • /S-ON (Servo ON Input) signal • /P-CON (Proportional Control Input) signal • P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals • /ALM-RST (Alarm Reset Input) signal • /P-CL (Forward External Torque Limit Input) and /N-CL (Reverse External Torque Limit Input) signals • /SPD-D (Motor Direction Input) signal • /SPD-A and /SPD-B (Internal Set Speed Selection Input) signals • /C-SEL (Control Selection Input) signal • /ZCLAMP (Zero Clamping Input) signal • /INHIBIT (Reference Pulse Inhibit Input) signal • /G-SEL (Gain Selection Input) signal • /P-DET (Polarity Detection Input) signal • SEN (Absolute Data Request Input) signal • /PSEL (Reference Pulse Input Multiplication Switch Input) Signal • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 (output method: a photocoupler output (isolated))
		Output signal: ALM (Servo Alarm Output) signal
	Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 6 (3: output method: a photocoupler output (isolated)) (3: output method: an open-collector output (non-isolated))
		Output signals: • /COIN (Positioning Completion Output) signal • /V-CMP (Speed Coincidence Detection Output) signal • /TGON (Rotation Detection Output) signal • /S-RDY (Servo Ready Output) signal • /CLT (Torque Limit Detection Output) signal • /VLT (Speed Limit Detection Output) signal • /BK (Brake Output) signal • /WARN (Warning Output) signal • /NEAR (Near Output) signal • /PSELA (Reference Pulse Input Multiplication Switching Output) signal • ALO1, ALO2, and ALO3 (Alarm Code Output) signals A signal can be allocated and the positive and negative logic can be changed.

■ Function

Item			Specification
Communications	RS-422A Communications (CN3)	Interfaces	Digital Operator (JUSP-OP05A-1-E) and personal computer (with SigmaWin+)
		1:N Communications	Up to N = 15 stations possible for RS-422A port
		Axis Address Setting	Set with parameters.
	USB Communications (CN7)	Interfaces	Personal computer (with SigmaWin+), digital operator (JUSP-OP07A-E)
		Communications Standard	Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators			CHARGE indicator and five-digit seven-segment display
Panel Operator			Four push switches
Analog Monitor (CN5)			Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA
Dynamic Brake (DB)			Activated when a servo alarm or overtravel (OT) occurs, or when the power to the main circuit or servo is OFF.
Regenerative Processing			Built-in (An external resistor must be connected to the SGDXS-470A to -780A.)
Overtravel (OT) Prevention			Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit Input) or N-OT (Reverse Drive Prohibit Input) signal
Protective Functions			Overcurrent, overvoltage, undervoltage, overload, regeneration error, etc.
Utility Functions			Gain tuning, alarm history, jogging operation, origin search, etc.
Safety Functions	Inputs		/HWBB1 and /HWBB2: Base block signals for power modules
	Output		EDM1: Monitors the status of built-in safety circuit (fixed output). *1
	Applicable Standards *2		ISO13849-1 PLe (Category 3) and IEC61508 SIL3

*1 Whether or not you use the EDM1 signal does not affect the performance level of safety parameters.
*2 Always perform risk assessment for the system and confirm that the safety requirements are met.

■ Option

Item	Specification
Applicable Option Modules	Fully-closed module

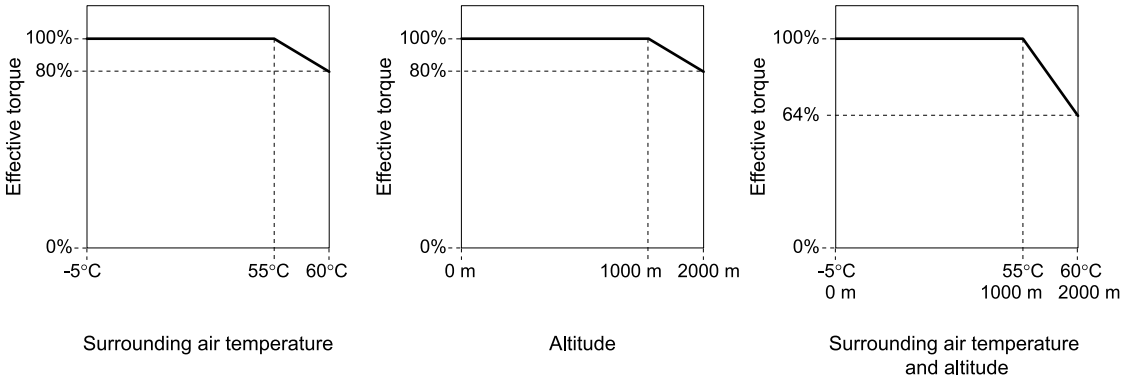
■ Control

Item				Specification
Speed Control	Soft Start Time Setting			0 s to 10 s (Can be set separately for acceleration and deceleration.)
	Input Signal		Reference Voltage	• Maximum input voltage: ±12 V (forward motor rotation for positive reference). • 6 VDC at rated speed (default setting). Input gain setting can be changed.
			Input Impedance	30 kΩ
			Circuit Time Constant	30 μs
	Internal Set Speed Control		Rotation Direction Selection	With /P-CON (Proportional Control Input) signal.
			Speed Selection	With Forward/Reverse External Torque Limit signals (speed 1 to 3 selection). Servomotor stops or another control method is used when both signals are OFF.
Position Control	Feedforward Compensation			0% to 100%
	Output Signal Positioning Completed Width Setting			0 to 1073741824 reference units
	Input Signal	Reference Pulses	Reference Pulse Form	One of the following is selected: Sign + pulse train, CW + CCW pulse trains, and two-phase pulse trains with 90° phase differential
			Input Form	Line driver or open collector
			Maximum Input Frequency	• Line Driver Sign + pulse train or CW + CCW pulse trains: 4 Mpps Two-phase pulse trains with 90° phase differential: 1 Mpps • Open Collector Sign + pulse train or CW + CCW pulse trains: 200 kpps Two-phase pulse trains with 90° phase differential: 200 kpps
			Input Multiplication Switching	1 to 100 times
		Clear Signal		Position deviation clear Line driver or open collector
Torque Control	Input Signal		Reference Voltage	• Maximum input voltage: ±12 V (forward torque output for positive reference). • 3 VDC at rated torque (default setting). Input gain setting can be changed.
			Input Impedance	30 kΩ
			Circuit Time Constant	16 μs

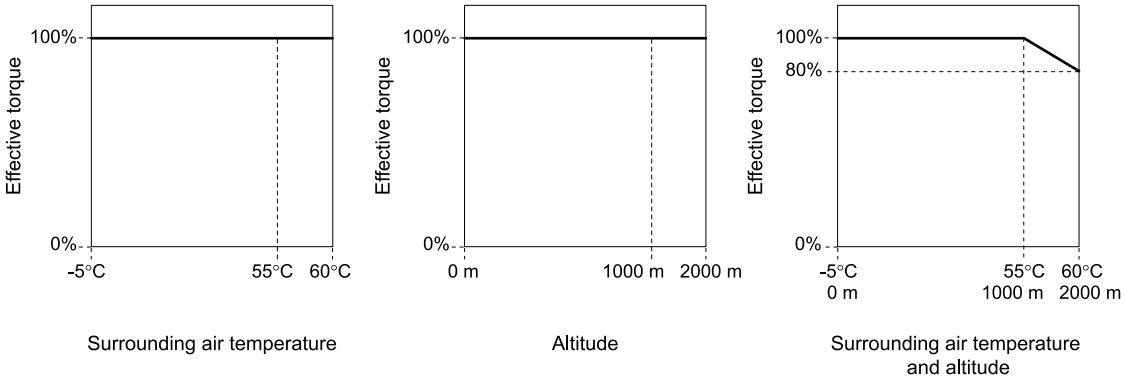
Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1000 m to 2000 m, you must apply the derating rates given in the following graphs.

■ SGDXS-R70A, -R90A, -1R6A, -2R8A



■ SGDXS-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, -780A

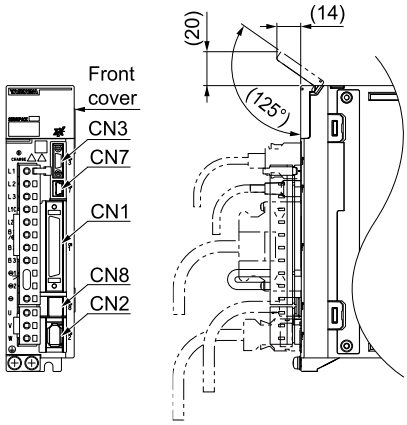


External Dimensions

Front Cover Dimensions and Connector Specifications

The connector shapes and pin assignments depend on the interfaces of the SERVOPACK. Refer to the following figures and table.

■ Front Cover Dimensions



■ Connector Specifications

Connector No.	Model	Number of Pins	Manufacturer
CN1	10250-52A2PL	50	3M Japan Limited
CN2	53984-0681	6	Molex Japan Co., Ltd.
CN3	HDR-EC14LFDTN-SLD-PLUS	14	Honda Tsushin Kogyo Co., Ltd.
CN7	2342993-1	5	Tyco Electronics Japan G.K.
CN8	2294415-1	8	Tyco Electronics Japan G.K.

Note:
The above connectors or their equivalents are used for the SERVOPACKs.

SERVOPACK External Dimensions

■ Base-mounted SERVOPACKs

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

A.710 or A.720 (an overload alarm) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the servomotor.

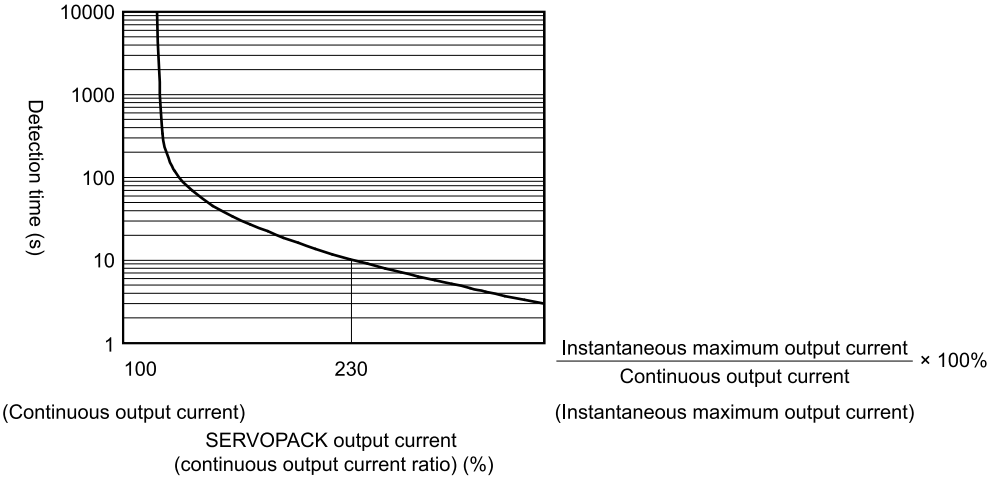

Figure .3 SGDXS-R70A, -R90A, -1R6A, -2R8A

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

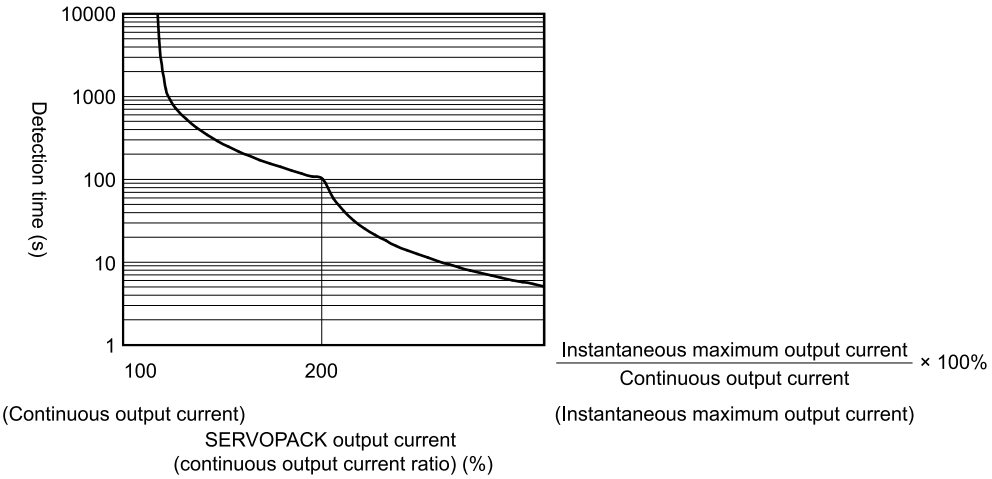

Figure .4 SGDXS-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, -780A

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

Specification

■ Environmental Conditions

Item	Specification
Surrounding Air Temperature	-5°C to 55°C (With derating, usage is possible between 55°C and 60°C.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 458*
Storage Temperature *1	-20°C to 85°C
Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)
Storage Humidity	95% relative humidity max. (with no freezing or condensation)
Vibration Resistance	When there is continuous vibration: 10 Hz to 55 Hz, acceleration amplitude 5.9 m/s^2 (0.6G)
Impact Resistance	19.6 m/s^2
Degree of Protection	IP20: Models SGDXS-R70A, -R90A, -1R6A, -2R8A, -3R8A, -5R5A, -7R6A, -120A IP10: Models SGDXS-180A, -200A, -330A, -470A, -550A, -590A, -780A
Pollution Degree	2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
Altitude *1	1000 m max. (With derating, usage is possible between 1000 m and 2000 m.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 458*
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity

*1 If you combine a Σ-X-series SERVOPACK with a Σ-V-series option module, the following Σ-V-series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1000 m max. Also, the applicable surrounding range cannot be increased by derating.

■ I/O Signals

Item	Specification
Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
Overheat Protection Input	Number of input points: 1 Input voltage range: 0 V to +5 V
Outputs for Triggers at Preset Positions	Number of output points: 3 (output method: a line driver output) Output signals: High-Speed Output Signal for Triggers at Preset Positions 1 to 3 (HSO1 to 3) **Note:** Normal Output Signal for Triggers at Preset Positions 1 to 3 (/NSO1 to 3) are used by allocating the signals to sequence output signals.

Continued on next page.

Continued from previous page.

Item		Specification
Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 (input method: sink inputs or source inputs)
		Input signals: • P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals • /P-CL (Forward External Torque Limit Input) and /N-CL (Reverse External Torque Limit Input) signals • /DEC (Origin Return Deceleration Switch Input) signal • /EXT1 to /EXT3 (External Latch Input 1 to 3) signals • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 (output method: a photocoupler output (isolated))
		Output signal: ALM (Servo Alarm Output) signal
	Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (output method: a photocoupler output (isolated))
		Output signals: • /COIN (Positioning Completion Output) signal • /V-CMP (Speed Coincidence Detection Output) signal • /TGON (Rotation Detection Output) signal • /S-RDY (Servo Ready Output) Signal • /CLT (Torque Limit Detection Output) signal • /VLT (Speed Limit Detection Output) signal • /BK (Brake Output) signal • /WARN (Warning Output) signal • /NEAR (Near Output) signal • /NSO1 to 3 (Normal Output for Triggers at Preset Positions 1 to 3) signals A signal can be allocated and the positive and negative logic can be changed.

	Profile	MECHATROLINK-4 standard servo profile MECHATROLINK-III standard servo profile
MECHATROLINK-III Communications *1	Communications Protocol	MECHATROLINK-III
	Station Address Settings	03h to EFh (maximum number of slaves: 62) The rotary switches (S1 and S2) are used to set the station address.
	Transmission Speed	100 Mbps
	Transmission Cycle	125 µs, 250 µs, 500 µs, 750 µs, 1.0 ms to 4.0 ms (multiples of 0.5 ms)
	Number of Transmission Bytes	32 or 48 bytes/station A DIP switch (S3) is used to select the transmission bytes.
Reference Methods for MECHATROLINK-III Communications	Performance	Position, speed, or torque control with MECHATROLINK-III communications
	Reference Input	MECHATROLINK-III commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
	Profile	MECHATROLINK-III standard servo profile
MECHATROLINK-4 and MECHATROLINK-III Communications Setting Switches		Rotary switch (S1 and S2) positions: 16
		Number of DIP switch (S3) pins: 4
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGDXS-470A to -550A.)
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit Input) or N-OT (Reverse Drive Prohibit Input) signal
Protective Functions		Overcurrent, overvoltage, undervoltage, overload, regeneration error, etc.
Utility Functions		Gain tuning, alarm history, jogging operation, origin search, etc.
Safety Functions	Inputs	/HWBB1 and /HWBB2: Base block signals for power modules
	Output	EDM1: Monitors the status of built-in safety circuit (fixed output). *3
	Applicable Standards *4	ISO13849-1 PLe (Category 3) and IEC61508 SIL3

*1 Use the DIP switch S3 to switch the communications protocol. For details, refer to the following manual.

Σ-X-Series AC Servo Drive Σ-XS SERVOPACK with MECHATROLINK-4/III Communications References Product Manual (Manual No.: SIEP C710812 01)

*2 Multiple transmission cycles are supported.

*3 Whether or not you use the EDM1 signal does not affect the performance level of safety parameters.

*4 Always perform risk assessment for the system and confirm that the safety requirements are met.

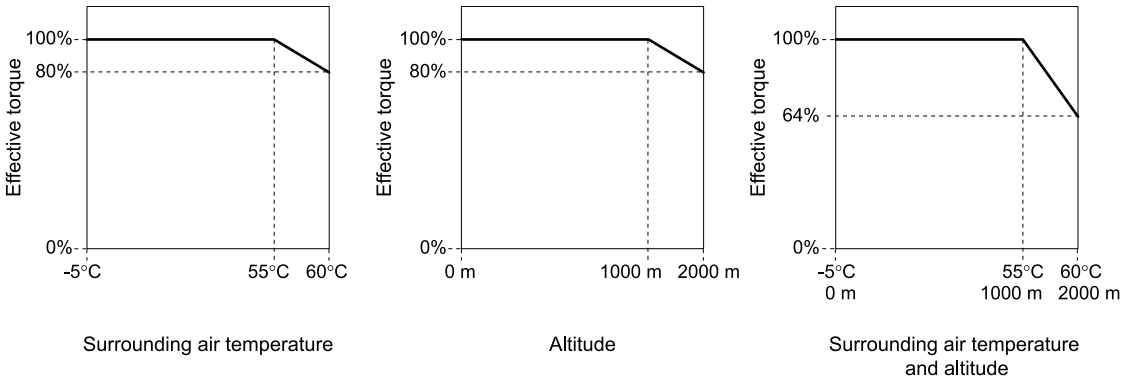
Item	Specification
Applicable Option Modules	Fully-closed module

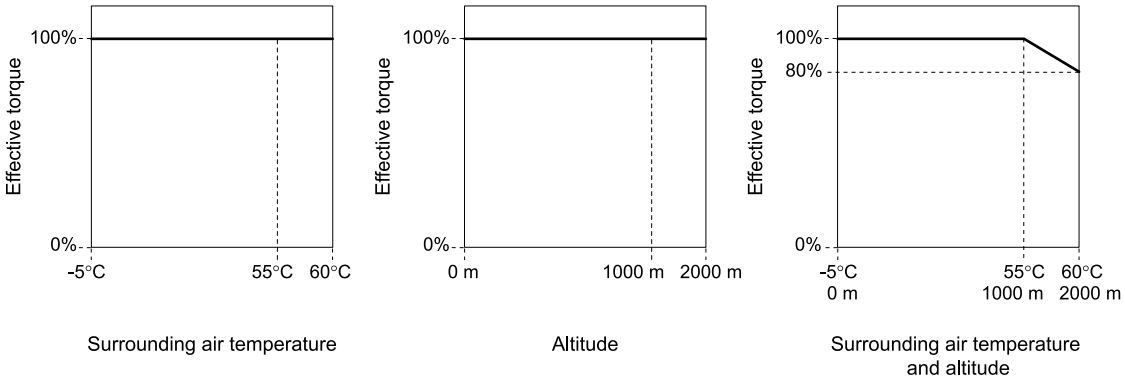
Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1000 m to 2000 m, you must apply the derating rates given in the following graphs.

■ SGDXS-R70A, -R90A, -1R6A, -2R8A



■ SGDXS-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, -780A

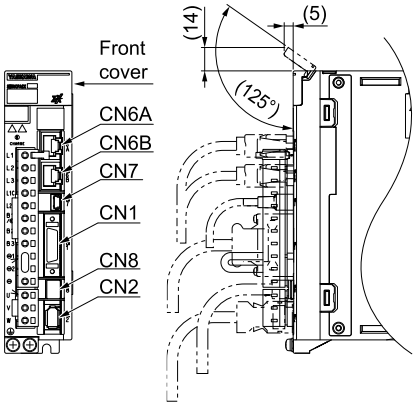


External Dimensions

Front Cover Dimensions and Connector Specifications

The connector shapes and pin assignments depend on the interfaces of the SERVOPACK. Refer to the following figures and table.

■ Front Cover Dimensions



■ Connector Specifications

Connector No.	Model	Number of Pins	Manufacturer
CN1	10226-59A3MB	26	3M Japan Limited
CN2	53984-0681	6	Molex Japan Co., Ltd.
CN6A/B	3-1734579-4	8	Tyco Electronics Japan G.K.
CN7	2342993-1	5	Tyco Electronics Japan G.K.
CN8	2294415-1	8	Tyco Electronics Japan G.K.

Note:

The above connectors or their equivalents are used for the SERVOPACKs.

Overvoltage Category	III						

*1 This is the net value at the rated load.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

A.710 or A.720 (an overload alarm) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the servomotor.

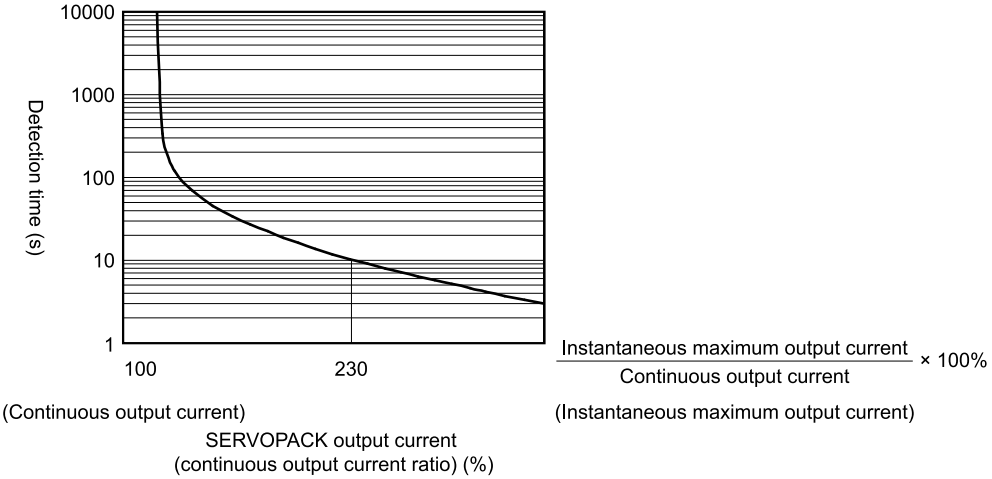

Figure .5 SGDXS-R70A, -R90A, -1R6A, -2R8A

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

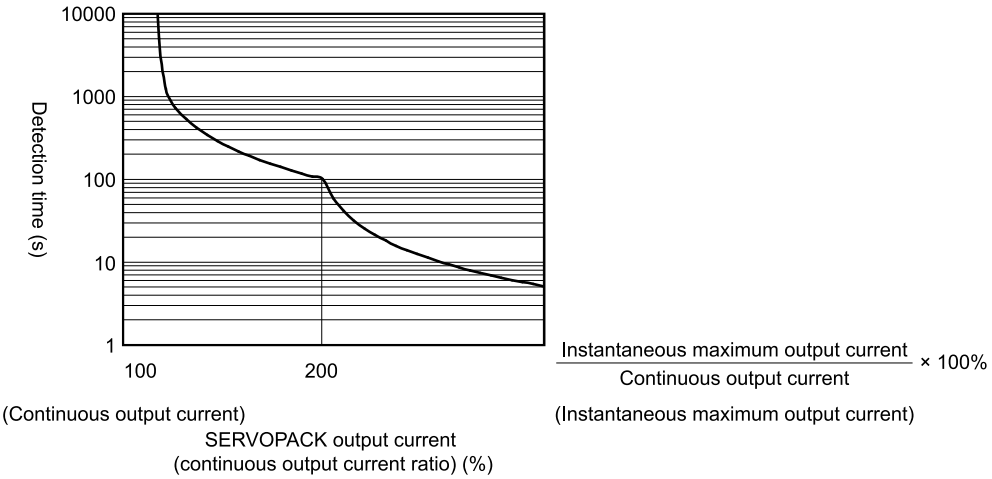

Figure .6 SGDXS-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, -780A

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

Specification

■ Environmental Conditions

Item	Specification
Surrounding Air Temperature	-5°C to 55°C (With derating, usage is possible between 55°C and 60°C.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 477*
Storage Temperature *1	-20°C to 85°C
Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)
Storage Humidity	95% relative humidity max. (with no freezing or condensation)
Vibration Resistance	When there is continuous vibration: 10 Hz to 55 Hz, acceleration amplitude 5.9 m/s^2 (0.6G)
Impact Resistance	19.6 m/s^2
Degree of Protection	IP20: Models SGDXS-R70A, -R90A, -1R6A, -2R8A, -3R8A, -5R5A, -7R6A, -120A IP10: Models SGDXS-180A, -200A, -330A, -470A, -550A, -590A, -780A
Pollution Degree	2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
Altitude *1	1000 m max. (With derating, usage is possible between 1000 m and 2000 m.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 477*
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity

*1 If you combine a Σ-X-series SERVOPACK with a Σ-V-series option module, the following Σ-V-series SERVOPACKs specifications must be used: a surrounding air temperature of 0°C to 55°C and an altitude of 1000 m max. Also, the applicable surrounding range cannot be increased by derating.

■ I/O Signals

Item	Specification
Encoder Divided Pulse Output	Phase A, phase B, phase C: Line-driver output Number of divided output pulses: Any setting is allowed.
Overheat Protection Input	Number of input points: 1 Input voltage range: 0 V to +5 V
Outputs for Triggers at Preset Positions	Number of output points: 3 (output method: a line driver output) Output signals: High-Speed Output Signal for Triggers at Preset Positions 1 to 3 (HSO1 to 3) **Note:** Normal Output Signal for Triggers at Preset Positions 1 to 3 (/NSO1 to 3) are used by allocating the signals to sequence output signals.

Continued on next page.

Continued from previous page.

Item		Specification
Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 7 (input method: sink inputs or source inputs)
		Input signals: • P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals • /Probe1 (Probe 1 Latch Input) signal • /Probe2 (Probe 2 Latch Input) signal • /Home (Home Switch Input) signal • /P-CL (Forward External Torque Limit Input) and /N-CL (Reverse External Torque Limit Input) signals • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 1 (output method: a photocoupler output (isolated))
		Output signal: ALM (Servo Alarm Output) signal
	Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (output method: a photocoupler output (isolated))
		Output signals: • /COIN (Positioning Completion Output) signal • /V-CMP (Speed Coincidence Detection Output) signal • /TGON (Rotation Detection Output) signal • /S-RDY (Servo Ready Output) Signal • /CLT (Torque Limit Detection Output) signal • /VLT (Speed Limit Detection Output) signal • /BK (Brake Output) signal • /WARN (Warning Output) signal • /NEAR (Near Output) signal • /NSO1 to 3 (Normal Output for Triggers at Preset Positions 1 to 3) signals A signal can be allocated and the positive and negative logic can be changed.

■ Function

Item			Specification
Communications	USB Communications (CN7)	Interfaces	Personal computer (with SigmaWin+), digital operator (JUSP-OP07A-E)
		Communications Standard	Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators			CHARGE, RUN, ERR, L/A A, L/A B, and one-digit seven-segment LED
EtherCAT Communications Setting Switches			ID Selector (S1 and S2) positions: 16

Continued on next page.

Continued from previous page.

Item		Specification
EtherCAT Communications	Applicable Communications Standards	IEC 61158 Type 12, IEC 61800-7 CiA402 drive profile
	Physical Layer	100BASE-TX (IEEE802.3)
	Communications Connectors	CN6A (RJ45): EtherCAT signal input connector CN6B (RJ45): EtherCAT signal output connector
	Cable	Category 5, 4 shielded twisted pairs The cable is automatically detected with AUTO MDIX.
	SyncManager	SM0: Mailbox output, SM1: Mailbox input, SM2: Process data output, and SM3: Process data input
	FMMU	FMMU 0: Mapped in process data output (RxPDO) area. FMMU 1: Mapped in process data input (TxPDO) area. FMMU 2: Mapped to mailbox status.
	EtherCAT Commands (Data Link Layer)	APRD, APWR, APRW, FPRD, FPWR, FPRW, BRD, BWR, BRW, LRD, LWR, LRW, ARMW, FRMW
	Process Data	Assignments can be changed with PDO mapping.
	Mailbox	Emergency messages, SDO requests, SDO responses
	Distributed Clocks	Free-run mode and DC mode (can be switched.) Applicable DC cycles: 62.5 μs to 4 ms in 62.5-μs increments
	Slave Information IF	4 KB
	LED Indicator	During EtherCAT communications: L/A x 2 EtherCAT communications status: RUN x 1 EtherCAT error status: ERR x 1
CiA402 Drive Profile		• Homing Mode • Profile Position Mode • Interpolated Position Mode • Profile Velocity Mode • Profile Torque Mode • Cyclic Synchronous Position Mode • Cyclic Synchronous Velocity Mode • Cyclic Synchronous Torque Mode • Touch Probe Function • Torque Limit Function
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power to the main circuit or servo is OFF.
Regenerative Processing		Built-in (An external resistor must be connected to the SGDXS-470A to -780A.)
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit Input) or N-OT (Reverse Drive Prohibit Input) signal
Protective Functions		Overcurrent, overvoltage, undervoltage, overload, regeneration error, etc.
Utility Functions		Gain tuning, alarm history, jogging operation, origin search, etc.

*1 You can use these models with either a single-phase or three-phase input.

*2 If you use the SERVOPACK with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.
If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65%.
((90% + 40%)/2 = 65%)

*3 The same SERVOPACKs are used for both rotary servomotors and linear servomotors.

*4 For details, refer to the following manual.

Σ-X-Series Σ-XS/Σ-XW SERVOPACK with Dynamic Brake Hardware Option Specifications Product Manual (Manual No.: SIEP C710812 14)

*5 For details, refer to the following manual.

	Total Power Loss [W]	35.7	50.3	75.4	90.7
Overvoltage Category		III			

*1 This is the net value at the rated load.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

A.710 or A.720 (an overload alarm) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the servomotor.

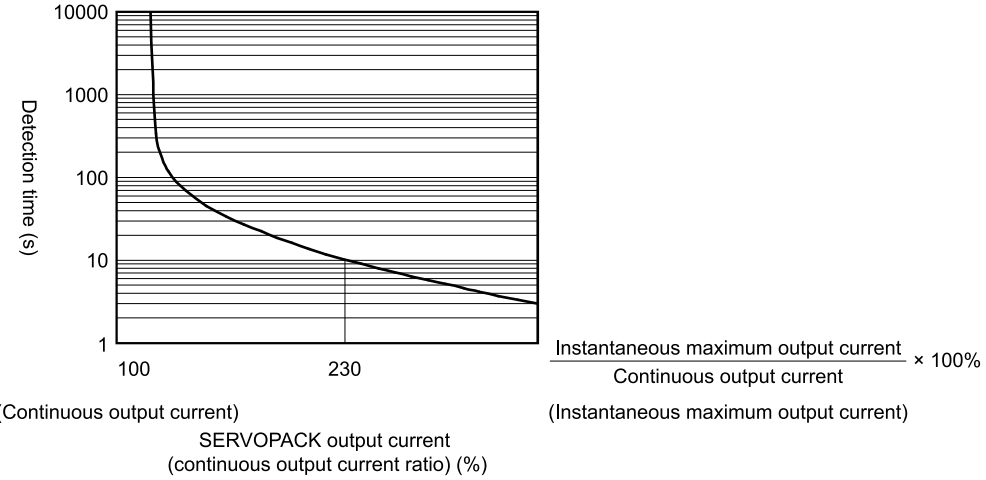

Figure .7 SGDXW-1R6, -2R8

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.
  For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

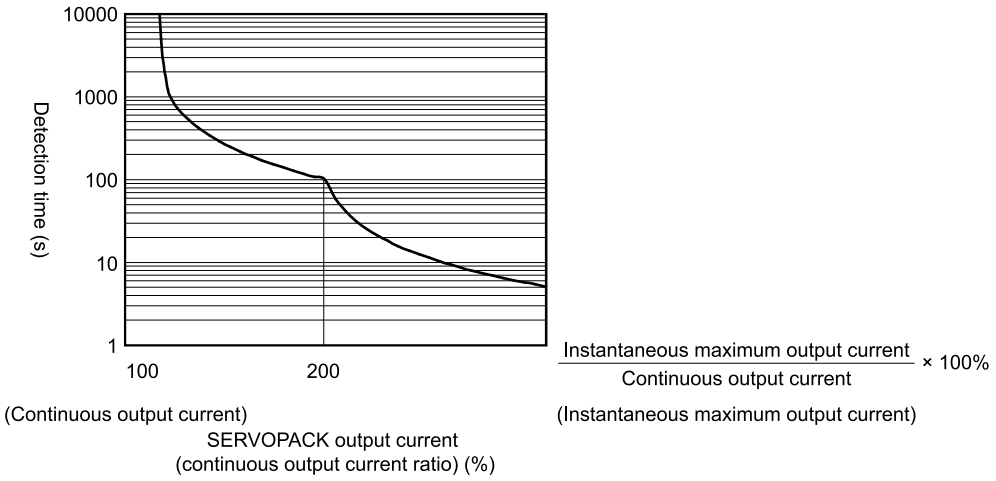

Figure .8 SGDXW-5R5, -7R6

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

Specification

■ Environmental Conditions

Item	Specification
Surrounding Air Temperature	-5°C to 55°C (With derating, usage is possible between 55°C and 60°C.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 494*
Storage Temperature	-20°C to 85°C
Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)
Storage Humidity	95% relative humidity max. (with no freezing or condensation)
Vibration Resistance	When there is continuous vibration: 10 Hz to 55 Hz, acceleration amplitude 5.9 m/s^2 (0.6G)
Impact Resistance	19.6 m/s^2
Degree of Protection	IP20
Pollution Degree	2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
Altitude	1000 m max. (With derating, usage is possible between 1000 m and 2000 m.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 494*
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity

■ I/O Signals

Item		Specification
Overheat Protection Input		Number of input points: 2 Input voltage range: 0 V to +5 V
Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 12 (input method: sink inputs or source inputs)
		Input signals: • P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals • /P-CL (Forward External Torque Limit Input) and /N-CL (Reverse External Torque Limit Input) signals • /DEC (Origin Return Deceleration Switch Input) signal • /EXT1 to /EXT3 (External Latch Input 1 to 3) signals • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 2 (output method: a photocoupler output (isolated))
		Output signal: ALM (Servo Alarm Output) signal
	Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 5 (output method: a photocoupler output (isolated))
		Output signals: • /COIN (Positioning Completion Output) signal • /V-CMP (Speed Coincidence Detection Output) signal • /TGON (Rotation Detection Output) signal • /S-RDY (Servo Ready Output) Signal • /CLT (Torque Limit Detection Output) Signal • /VLT (Speed Limit Detection Output) signal • /BK (Brake Output) signal • /WARN (Warning Output) signal • /NEAR (Near Output) signal • /NSO1 to 3 (Normal Output for Triggers at Preset Positions 1 to 3) signals A signal can be allocated and the positive and negative logic can be changed.

Item		Specification
Reference Methods for MECHATROLINK-4 Communications	Performance	Position, speed, or torque control with MECHATROLINK-4 communications
	Reference Input	MECHATROLINK-4 commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
	Profile	MECHATROLINK-4 standard servo profile MECHATROLINK-III standard servo profile
MECHATROLINK-III Communications *1	Communications Protocol	MECHATROLINK-III
	Station Address Settings	03h to EFh (maximum number of slaves: 62) The rotary switches (S1 and S2) are used to set the station address.
	Extended Address Settings	Axis A: 00h, Axis B: 01h
	Transmission Speed	100 Mbps
	Transmission Cycle	250 µs, 500 µs, 750 µs, 1.0 ms to 4.0 ms (multiples of 0.5 ms)
	Number of Transmission Bytes	32 or 48 bytes/station A DIP switch (S3) is used to select the transmission bytes.
Reference Methods for MECHATROLINK-III Communications	Performance	Position, speed, or torque control with MECHATROLINK-III communications
	Reference Input	MECHATROLINK-III commands (sequence, motion, data setting, data access, monitoring, adjustment, etc.)
	Profile	MECHATROLINK-III standard servo profile
MECHATROLINK-4 and MECHATROLINK-III Communications Setting Switches		Rotary switch (S1 and S2) positions: 16
		Number of DIP switch (S3) pins: 4
Analog Monitor (CN5)		Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA
Dynamic Brake (DB)		Activated when a servo alarm or overtravel (OT) occurs, or when the power to the main circuit or servo is OFF.
Regenerative Processing		Built-in
Overtravel (OT) Prevention		Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit Input) or N-OT (Reverse Drive Prohibit Input) signal
Protective Functions		Overcurrent, overvoltage, undervoltage, overload, regeneration error, etc.
Utility Functions		Gain tuning, alarm history, jogging operation, origin search, etc.

*1 Use the DIP switch S3 to switch the communications protocol. For details, refer to the following manual.

Σ-X-Series AC Servo Drive Σ-XW SERVOPACK with MECHATROLINK-4/III Communications References Product Manual (Manual No.: SIEP C710812 04)

*2 Multiple transmission cycles are supported.

SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

A.710 or A.720 (an overload alarm) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the applicable line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the servomotor.

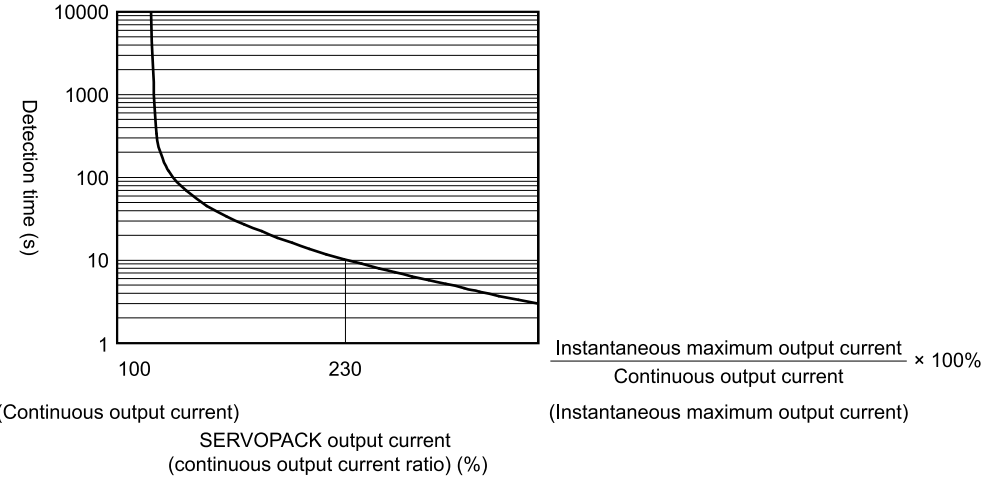

Figure .9 SGDXW-1R6, -2R8

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher.
  For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

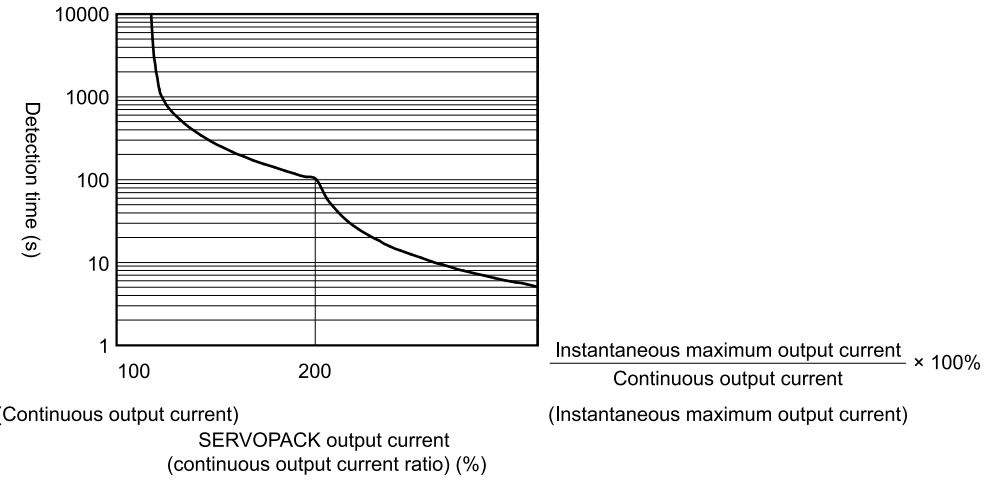

Figure .10 SGDXW-5R5, -7R6

Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

Specification

■ Environmental Conditions

Item	Specification
Surrounding Air Temperature	-5°C to 55°C (With derating, usage is possible between 55°C and 60°C.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 505*
Storage Temperature	-20°C to 85°C
Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)
Storage Humidity	95% relative humidity max. (with no freezing or condensation)
Vibration Resistance	When there is continuous vibration: 10 Hz to 55 Hz, acceleration amplitude 5.9 m/s^2 (0.6G)
Impact Resistance	19.6 m/s^2
Degree of Protection	IP20
Pollution Degree	2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
Altitude	1000 m max. (With derating, usage is possible between 1000 m and 2000 m.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 505*
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity

■ I/O Signals

Item		Specification
Overheat Protection Input		Number of input points: 2 Input voltage range: 0 V to +5 V
Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 12 (input method: sink inputs or source inputs)
		Input signals: • P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals • /Probe1 (Probe 1 Latch Input) signal • /Probe2 (Probe 2 Latch Input) signal • /Home (Home Switch Input) signal • /P-CL (Forward External Torque Limit Input) and /N-CL (Reverse External Torque Limit Input) signals • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 2 (output method: a photocoupler output (isolated))
		Output signal: ALM (Servo Alarm Output) signal
	Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 5 (output method: a photocoupler output (isolated))
		Output signals: • /COIN (Positioning Completion Output) signal • /V-CMP (Speed Coincidence Detection Output) signal • /TGON (Rotation Detection Output) signal • /S-RDY (Servo Ready Output) signal • /CLT (Torque Limit Detection Output) signal • /VLT (Speed Limit Detection Output) signal • /BK (Brake Output) signal • /WARN (Warning Output) signal • /NEAR (Near Output) signal • /NSO1 to 3 (Normal Output for Triggers at Preset Positions 1 to 3) signals A signal can be allocated and the positive and negative logic can be changed.

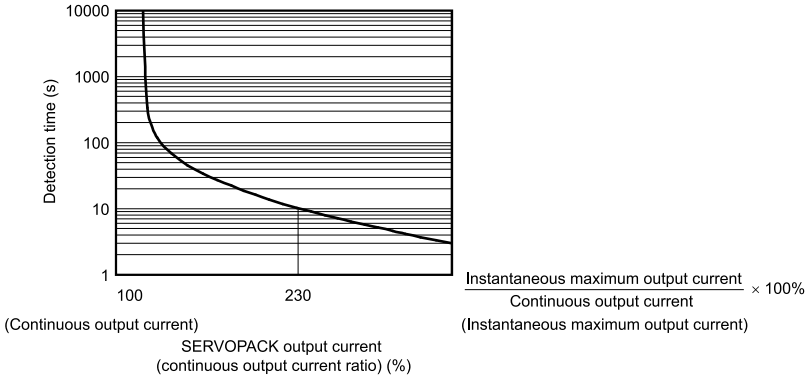
SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

A.710 or A.720 (an overload alarm) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the vertical line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the servomotor.



Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

In addition, the model that requires derating when using with single-phase power supply input (applicable model: SGDXT-2R8A) has separate overload protection characteristics (= SERVOPACK overload detection) in addition to the overload protection characteristics listed above. SERVOPACK overload detection will activate A.729 (Overload 2 Alarm) if operation that exceeds the derated value is continuously performed. Use the following values as guidelines for continuous operation that will exceed the derated value.

- Operation for a long period of time at a load of 115% or more of the derated value.
- Operation for 5 s at a load of 200% of the derated value.

Even if the above conditions are satisfied, the above alarm may not be activated when the SERVOPACK is producing a low amount of heat.

Model SGDXT-			1R6A	2R8A
Regenerative Resistor	Built-In Regenerative Resistor	Resistance [Ω]	12	
		Capacity [W]	70	
		Allowable Power Consumption [W]	14	
	Minimum Allowable External Resistance [Ω]		12	
Overvoltage Category			III	

*1 If you use the servomotor with a single-phase power supply input, derate the total continuous output of the motors to 65% of maximum applicable motor capacity × number of axes.
Example: For the SGDXT-2R8A, make the output 0.4 kW × 3 axes × 65% = 0.78 kW or less. To perform operation at an output of 0.4 kW for the first axis and 0.2 kW for the second axis, you must limit the output for the third axis to 0.18 kW or less.

*2 This is the net value at the rated load (when derated for the SGDXT-2R8A).

■ 270 VDC

Model SGDXT-		1R6A	2R8A
Maximum Applicable Motor Capacity (each axis) [kW]		0.2	0.4
Continuous Output Current (each axis) [Arms]		1.6	2.8
Instantaneous Maximum Output Current (each axis) [Arms]		5.9	9.3
Main Circuit	Power Supply	270 VDC to 324 VDC, -15% to +10%	
	Input Current [Arms] *1	4.5	9.0
Control	Power Supply	270 VDC to 324 VDC, -15% to +10%	
	Input Current [Arms] *1	0.3	
Power Supply Capacity [kVA] *1		1.8	3.0
Power Loss *1	Main Circuit Power Loss [W]	28.1	50.4
	Control Circuit Power Loss [W]	17	
	Total Power Loss [W]	45.1	67.4
Overvoltage Category		III	

*1 This is the net value at the rated load.

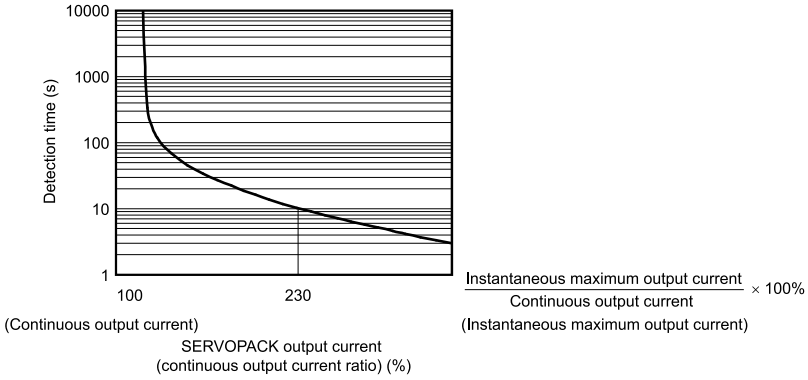
SERVOPACK Overload Protection Characteristics

The overload detection level is set for hot start conditions with a SERVOPACK surrounding air temperature of 55°C.

A.710 or A.720 (an overload alarm) will occur if overload operation that exceeds the overload protection characteristics shown in the following diagram (i.e., operation on the right side of the vertical line) is performed.

The actual overload detection level will be the detection level of the connected SERVOPACK or servomotor that has the lower overload protection characteristics.

In most cases, that will be the overload protection characteristics of the servomotor.



Note:

- The above overload protection characteristics do not mean that you can perform continuous duty operation with an output of 100% or higher. For a Yaskawa-specified combination of SERVOPACK and servomotor, maintain the effective torque within the continuous duty zone of the torque-motor speed characteristic of the servomotor.
- This overload protection function is not a protection function related to speed. This product does not have a built-in thermal memory hold function.

In addition, the model that requires derating when using with single-phase power supply input (applicable model: SGDXT-2R8A) has separate overload protection characteristics (= SERVOPACK overload detection) in addition to the overload protection characteristics listed above. SERVOPACK overload detection will activate A.729 (Overload 2 Alarm) if operation that exceeds the derated value is continuously performed. Use the following values as guidelines for continuous operation that will exceed the derated value.

- Operation for a long period of time at a load of 115% or more of the derated value.
- Operation for 5 s at a load of 200% of the derated value.

Even if the above conditions are satisfied, the above alarm may not be activated when the SERVOPACK is producing a low amount of heat.

Specification

■ Environmental Conditions

Item	Specification
Surrounding Air Temperature	-5°C to 55°C (With derating, usage is possible between 55°C and 60°C.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 524*
Storage Temperature	-20°C to 85°C
Surrounding Air Humidity	95% relative humidity max. (with no freezing or condensation)
Storage Humidity	95% relative humidity max. (with no freezing or condensation)
Vibration Resistance	When there is continuous vibration: 10 Hz to 55 Hz, acceleration amplitude 5.9 m/s^2 (0.6G)
Impact Resistance	19.6 m/s^2
Degree of Protection	IP20
Pollution Degree	2 • Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.

Continued on next page.

Continued from previous page.

Item	Specification
Altitude	1000 m max. (With derating, usage is possible between 1000 m and 2000 m.) Refer to the following section for derating specifications. ☞ *Derating Specifications on page 524*
Others	Do not use the SERVOPACK in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity

■ I/O Signals

Item		Specification
Outputs for Triggers at Preset Positions		Number of output points: 3 (output method: a photocoupler output) Output signals: High-Speed Output Signal for Triggers at Preset Positions 1 to 3 (HSO1 to 3) **Note:** Normal Output Signal for Triggers at Preset Positions 1 to 5 (/NSO1 to 5) are used by allocating the signals to sequence output signals.
Sequence Input Signals	Input Signals That Can Be Allocated	Allowable voltage range: 24 VDC ±20% Number of input points: 16 (input method: sink inputs or source inputs)
		Input signals: • P-OT (Forward Drive Prohibit Input) and N-OT (Reverse Drive Prohibit Input) signals • /Probe1 (Probe 1 Latch Input) signal • /Probe2 (Probe 2 Latch Input) signal • /Home (Home Switch Input) signal • /P-CL (Forward External Torque Limit Input) and /N-CL (Reverse External Torque Limit Input) signals • FSTP (Forced Stop Input) signal A signal can be allocated and the positive and negative logic can be changed.
Sequence Output Signals	Fixed Output	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 3 (output method: a photocoupler output (isolated)) Output signal: ALM (Servo Alarm Output) signal
	Output Signals That Can Be Allocated	Allowable voltage range: 5 VDC to 30 VDC Number of output points: 5 (output method: a photocoupler output (isolated))
		Output signals: • /COIN (Positioning Completion Output) signal • /V-CMP (Speed Coincidence Detection Output) signal • /TGON (Rotation Detection Output) signal • /S-RDY (Servo Ready Output) signal • /CLT (Torque Limit Detection Output) signal • /VLT (Speed Limit Detection Output) signal • /BK (Brake Output) signal • /WARN (Warning Output) signal • /NEAR (Near Output) signal • Normal Output Signal for Triggers at Preset Positions 1 to 5 (/NSO1 to 5) A signal can be allocated and the positive and negative logic can be changed.

■ Function

Item			Specification
Communications	USB Communications (CN7)	Interfaces	Personal computer (with SigmaWin+), digital operator (JUSP-OP07A-E)
		Communications Standard	Conforms to USB2.0 standard (12 Mbps).
Displays/Indicators			CHARGE, RUN, ERR, L/A A, L/A B, and three one-digit seven-segment LED
EtherCAT Communications Setting Switches			ID Selector (S1 and S2) positions: 16
EtherCAT Communications	Applicable Communications Standards		IEC 61158 Type 12, IEC 61800-7 CiA402 drive profile
	Physical Layer		100BASE-TX (IEEE802.3)
	Communications Connectors		CN6A (RJ45): EtherCAT signal input connector CN6B (RJ45): EtherCAT signal output connector
	Cable		Category 5, 4 shielded twisted pairs The cable is automatically detected with AUTO MDIX.
	SyncManager		SM0: Mailbox output, SM1: Mailbox input, SM2: Process data output, and SM3: Process data input
	FMMU		FMMU 0: Mapped in process data output (RxPDO) area. FMMU 1: Mapped in process data input (TxPDO) area. FMMU 2: Mapped to mailbox status.
	EtherCAT Commands (Data Link Layer)		APRD, APWR, APRW, FPRD, FPWR, FPRW, BRD, BWR, BRW, LRD, LWR, LRW, ARMW, FRMW
	Process Data		Assignments can be changed with PDO mapping.
	Mailbox		Emergency messages, SDO requests, SDO responses, and SDO information (TxPDO/RxPDO and remote TxPDO/RxPDO are not supported.)
	Distributed Clocks		Free-run mode and DC mode (can be switched.) Applicable DC cycles: 125 µs to 4 ms in 125-µs increments
	Slave Information IF		4 KB
	LED Indicator		During EtherCAT communications: L/A x 2 EtherCAT communications status: RUN x 1 EtherCAT error status: ERR x 1
CiA402 Drive Profile			• Homing Mode • Profile Position Mode • Interpolated Position Mode • Profile Velocity Mode • Profile Torque Mode • Cyclic Synchronous Position Mode • Cyclic Synchronous Velocity Mode • Cyclic Synchronous Torque Mode • Touch Probe Function • Torque Limit Function
Analog Monitor (CN5)			Number of points: 2 Output voltage range: ±10 VDC (effective linearity range: ±8 V) Resolution: 16 bits Accuracy: ±20 mV (Typ) Maximum output current: ±10 mA
Dynamic Brake (DB)			Activated when a servo alarm or overtravel (OT) occurs, or when the power to the main circuit or servo is OFF.
Regenerative Processing			Built-in

Continued on next page.

Continued from previous page.

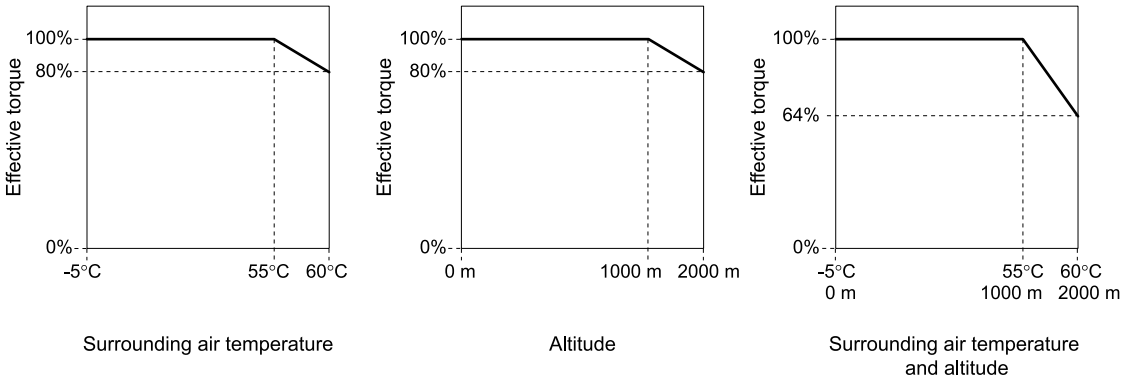
Item	Specification
Overtravel (OT) Prevention	Stopping with dynamic brake, deceleration to a stop, or coasting to a stop for the P-OT (Forward Drive Prohibit Input) or N-OT (Reverse Drive Prohibit Input) signal
Protective Functions	Overcurrent, overvoltage, undervoltage, overload, regeneration error, etc.
Utility Functions	Gain tuning, alarm history, jogging operation, origin search, etc.

■ Option

Item	Specification
Applicable Option Modules	None

Derating Specifications

If you use the SERVOPACK at a surrounding air temperature of 55°C to 60°C or at an altitude of 1000 m to 2000 m, you must apply the derating rates given in the following graphs.

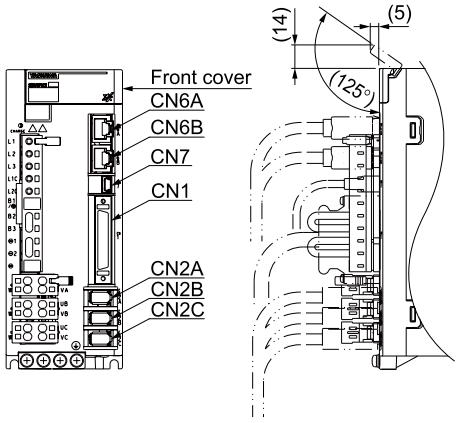


External Dimensions

Front Cover Dimensions and Connector Specifications

The front cover dimensions and panel connector section are the same for all capacities. Refer to the following figures and table.

■ Front Cover Dimensions



■ Connector Specifications

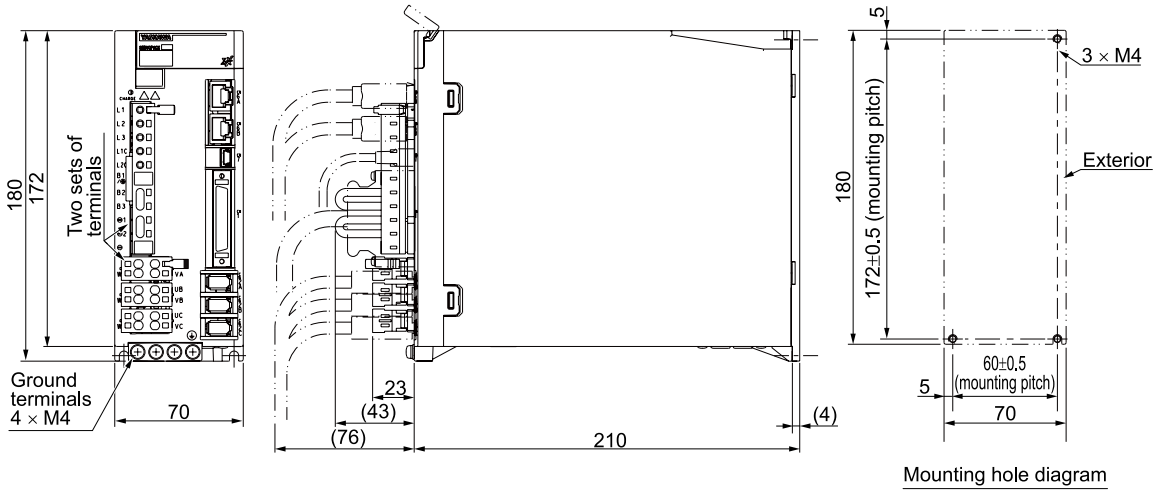
Connector No.	Model	Number of Pins	Manufacturer
CN1	10250-52A2PL	50	3M Japan Limited
CN2A, CN2B, CN2C	53460-0669	6	Molex Japan Co., Ltd.
CN6A, CN6B	3-1734579-4	8	Tyco Electronics Japan G.K.
CN7	2342993-1	5	Tyco Electronics Japan G.K.

Note:
The above connectors or their equivalents are used for the SERVOPACKs.

SERVOPACK External Dimensions

■ Base-mounted SERVOPACKs

◆ SGDXT-1R6A, -2R8A

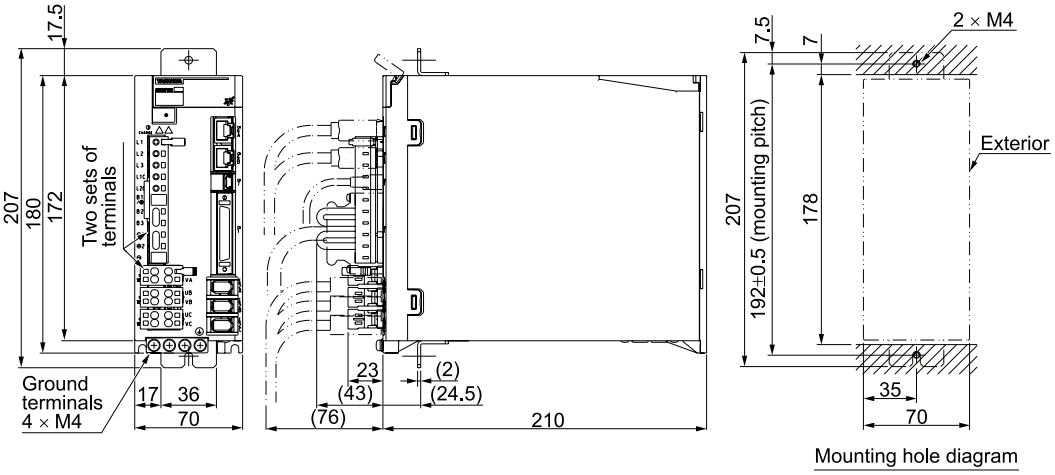


Approx. mass: 2.3 kg
Unit: mm

■ Rack-mounted SERVOPACKs

Hardware Option Code: 0001

◆ SGDXT-1R6A, -2R8A



Approx. mass: 2.3 kg
Unit: mm

Selection Table

- (1) Analog Monitor Cable

Length (L)	Order Number	Appearance
1 m	JZSP-CA01-E	

- (2) Computer Cable

> Important
> Use the Yaskawa-specified cable for the computer cable. Operation will not be dependable with any other cable.

Length (L)	Order Number	Appearance
2.5 m	JZSP-CVS06-02-E	
- (3) I/O Signal Cables for Σ-XS SERVOPACKs with Analog Voltage/Pulse Train Reference, Σ-XT SERVOPACKs with MECHATROLINK-4/III Communications Reference, and Σ-XT SERVOPACKs with EtherCAT Communications Reference

Name	Length (L)	Order Number	Appearance
Connector Kits (soldered)	–	JZSP-CSI9-1-E	
Connector-Terminal Block Converter Unit (with cable)	0.5 m	JUSP-TA50PG-E		1 m	JUSP-TA50PG-1-E	
	2 m	JUSP-TA50PG-2-E	
Cables with Loose Wires at One End (loose wires on peripheral device end)	1 m	JZSP-CSI01-1-E		2 m	JZSP-CSI01-2-E	
	3 m	JZSP-CSI01-3-E	

- (4) I/O Signal Cables for Σ-XS SERVOPACKs with MECHATROLINK-4/III Communications Reference and EtherCAT Communications Reference

Name	Length (L)	Order Number	Appearance
Connector Kits (soldered)	–	JZSP-CSI9-2-E	
Connector-Terminal Block Converter Unit (with cable)	0.5 m	JUSP-TA26P-E		1 m	JUSP-TA26P-1-E	
	2 m	JUSP-TA26P-2-E	
Cables with Loose Wires at One End (loose wires on peripheral device end)	1 m	JZSP-CSI02-1-E		2 m	JZSP-CSI02-2-E	
	3 m	JZSP-CSI02-3-E	

- (5) I/O Signal Cables for Σ-XW SERVOPACKs with MECHATROLINK-4/III Communications Reference and EtherCAT Communications Reference

Name	Length (L)	Order Number	Appearance
Connector Kits (soldered)	–	DP9420007-E	
Connector-Terminal Block Converter Unit (with cable)	0.5 m	JUSP-TA36P-E		1 m	JUSP-TA36P-1-E	
	2 m	JUSP-TA36P-2-E	
Cables with Loose Wires at One End (loose wires on peripheral device end)	1 m	JZSP-CSI03-1-E		2 m	JZSP-CSI03-2-E	
	3 m	JZSP-CSI03-3-E	

- (6) Safety Function Device Cable

Name	Length (L)	Order Number	Appearance
Cables with Connectors *1	1 m	JZSP-CVH03-01-E		3 m	JZSP-CVH03-03-E	
Connector Kits *2	–	Manufacturer: Tyco Electronics Japan G.K. Inquiries: Global Electronics Corporation Product name: Industrial Mini I/O D-Shape Type 1 Plug Connector Kit Model number: 2013595-1	

*1 When using safety functions, connect this cable to the safety function devices.
When not using safety functions, connect the enclosed safety jumper connector (JZSP-CVH05-E) to the SERVOPACK.
*2 Use the connector kit when you make cables yourself.

- (7) MECHATROLINK Communications Cables

> Important
> Use the Yaskawa-specified cables for the MECHATROLINK communications cables. Operation will not be dependable due to low noise resistance with any other cable.

The MECHATROLINK cable has connectors on both ends.

Type		Length (L)	Order Number	Appearance
Cables without Ferrite Cores	RJ-45 connectors on both ends	0.2 m	JZSP-CM3RRM0-00P2-E			0.5 m	JZSP-CM3RRM0-00P5-E	
		1 m	JZSP-CM3RRM0-01-E

		50 m	JZSP-CM3RR01-50-E	

The Ethernet cables with the following specifications can also be used to make the connections.

– Shielded: S/STP or S/UTP

– Category: CAT5e or better

– Length: 50 m max. (between nodes)

We recommend the following cable and connector.

Item	Manufacturer	Model
Ethernet Cable	Beckhoff	ZB9020
RJ-45 Connector	Beckhoff	ZS1090-0003

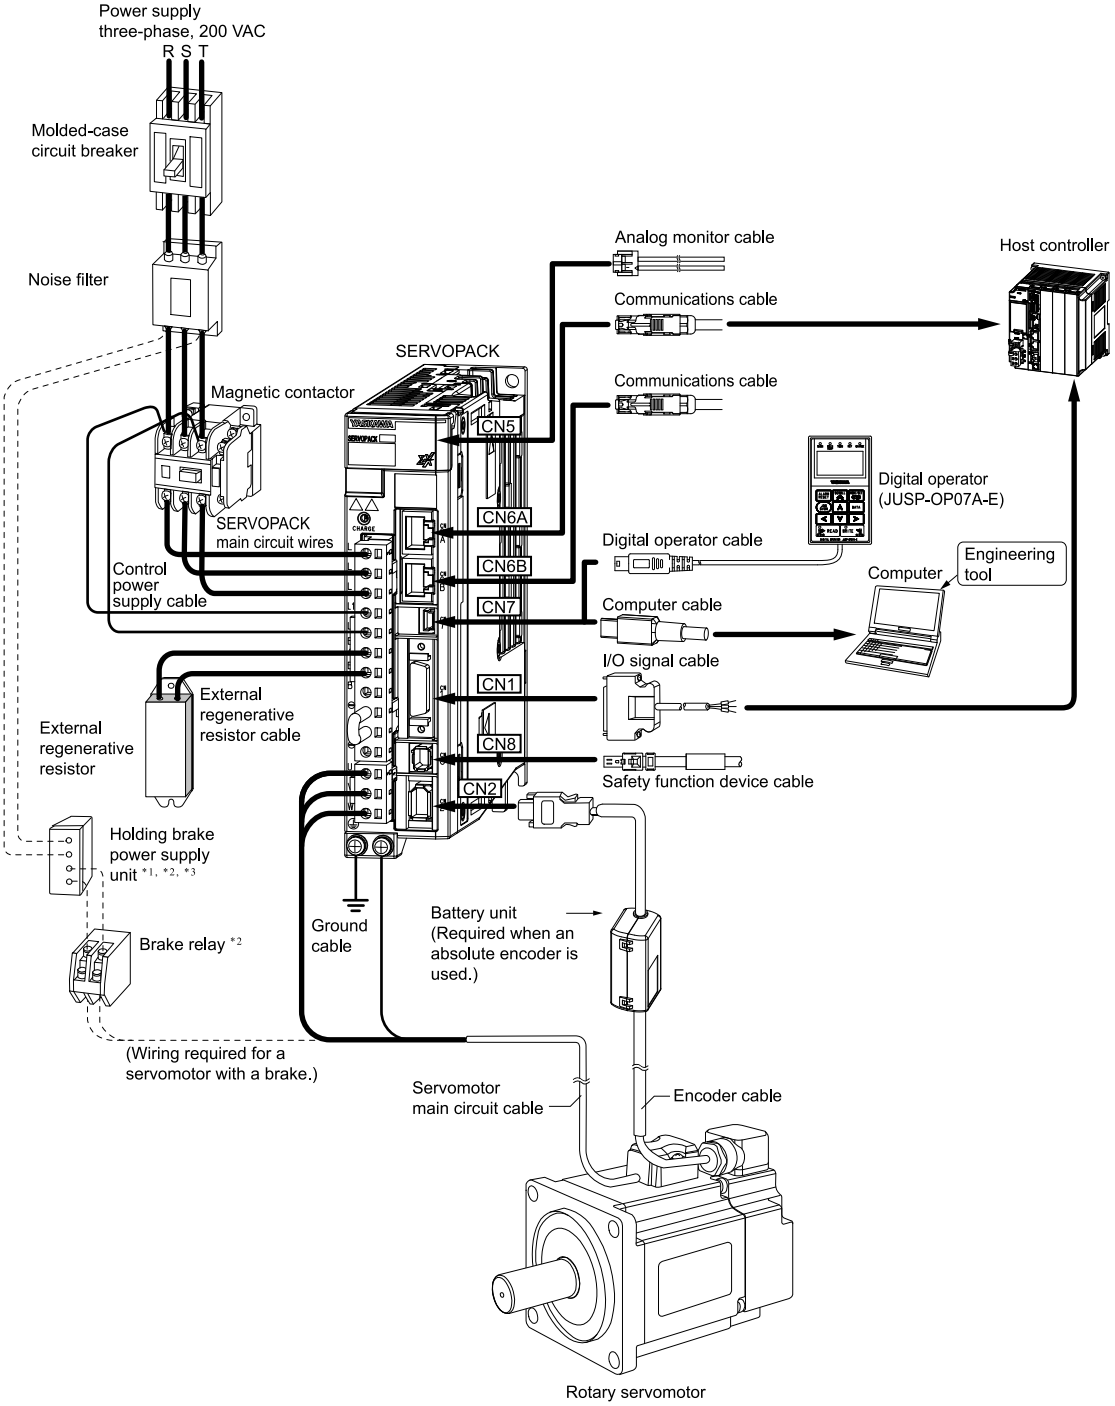
Connections between SERVOPACKs and Peripheral Devices

Peripheral Devices and System Configurations

Rotary Servomotors

This section describes an example using a three-phase, 200-VAC power supply input SERVOPACK with MECHATROLINK-4/III communications references. The connector shapes and pin assignments depend on the power supply input specifications and interfaces of the SERVOPACK.

Refer to the product manual that corresponds to the references used by your SERVOPACK.



*1 A holding brake power supply unit is required to use a servomotor with a holding brake. Holding brake power supply units for 24 VDC are not provided by Yaskawa. Obtain these from other manufacturers.
Never connect holding brake power supply units with different output voltages to a SERVOPACK. Overcurrent may result in burning in the brake.

*2 If you use a servomotor with a holding brake, select a brake relay according to the power supply voltage and current of the brake. Yaskawa does not recommend any particular brake relays. Select an appropriate brake relay using the selection method of the brake relay manufacturer.

*3 The holding brake power supply unit is not provided by Yaskawa. Select a power supply based on the holding brake specifications. If you use a 24-V brake, install a separate power supply for the 24-VDC power supply from other power supplies, such as the one for the I/O signals of the CN1 connector. If the power supply is shared, the I/O signals may malfunction.

The following table gives the reference information for each device.

Molded-Case Circuit Breakers and Fuses

Using an AC Power Supply

Use a molded-case circuit breaker and fuse to protect the power supply line. They protect the power line by shutting OFF the circuit when overcurrent is detected. Select these devices based on the information in the following tables.

Note:

The following tables provide the net values of the current capacity and inrush current. Select a fuse and a molded-case circuit breaker that meet the following conditions.

• Main circuit and control circuit: No breaking at three times the current value given in the table for 5 s.

• Inrush current: No breaking at the current value given in the table for 20 ms.

Single-phase, 200 VAC	0.2	1R6A	1.3	5.5					
	0.4	2R8A	2.4	11					
	0.75	5R5A *2	2.7	12					

*1 This is the net value at the rated load.

*2 If you use the SGDXW-5R5A with a single-phase 200-VAC power supply input, derate the load ratio to 65%. An example is given below.
If the load ratio of the first axis is 90%, use a load ratio of 40% for the second axis so that average load ratio for both axes is 65%.
((90% + 40%)/2 = 65%)

■ Σ-XT SERVOPACKs

Main Circuit Power Supply	Maximum Applicable Motor Capacity (each axis) [kW]	SERVOPACK Model: SGDXT-	Power Supply Capacity per SERVOPACK [kVA] *1	Current Capacity		Inrush Current		Rated Voltage	
				Main Circuit [Arms] *1	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Fuse [V]	MCCB [V]
Three-phase, 200 VAC	0.2	1R6A	1.5	3.9	0.3	34	57	250	240
	0.4	2R8A	3.0	7.5					
Single-phase, 200 VAC	0.2	1R6A	1.8	7.2					
	0.4	2R8A *2	3.6	12					

*1 This is the net value at the rated load.

*2 If you use the servomotor with a single-phase supply input, derate the total continuous output of the motor using the following equation: maximum applicable motor capacity × number of axes × 65%.
Example: When using the SGDXT-2R8A SERVOPACK, the total continuous output of the motor must be 0.78 kW or less (0.4 kW × 3 axes × 65% = 0.78 kW). When operating the first axis at an output of 0.4 kW and the second axis at 0.2 kW, the output of the third axis must be 0.18 kW or less.

Using a DC Power Supply

This section gives the power supply specifications for using a DC power supply input. Use the fuses given in the following tables to protect the power supply line and SERVOPACK. They protect the power line by shutting OFF the circuit when overcurrent is detected.

Note:

The following tables provide the net values of the current capacity and inrush current.

■ Σ-XS SERVOPACKs

Main Circuit Power Supply	SERVOPACK Model: SGDXS-	Power Supply Capacity per SERVOPACK [kVA] *1	Current Capacity		Inrush Current		External Fuse		
			Main Circuit [Arms] *1	Control power supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Order Number *2	Current Rating [A]	Voltage Rating [Vdc]
270 VDC	R70A	0.2	0.5	0.2	29	34	3,5URGJ17/16UL	16	400
	R90A	0.3	1.0

	780A	29.6	92						

*1 This is the net value at the rated load.
*2 These fuses are manufactured by Mersen Japan.
*3 If you use a DC power supply input with any of the following SERVOPACKs, externally connect an inrush current limiting circuit and use the power ON and OFF sequences recommended by Yaskawa: SGDXS-330A, -470A, -550A, -590A, and -780A.
There is a risk of equipment damage.
Refer to the manual for your SERVOPACK for the power ON and OFF sequences.

■ Σ-XW SERVOPACKs

Main Circuit Power Supply	SERVOPACK Model: SGDXW-	Power Supply Capacity per SERVOPACK [kVA] *1	Current Capacity		Inrush Current		External Fuse		
			Main Circuit [Arms] *1	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Order Number *2	Current Rating [A]	Voltage Rating [Vdc]

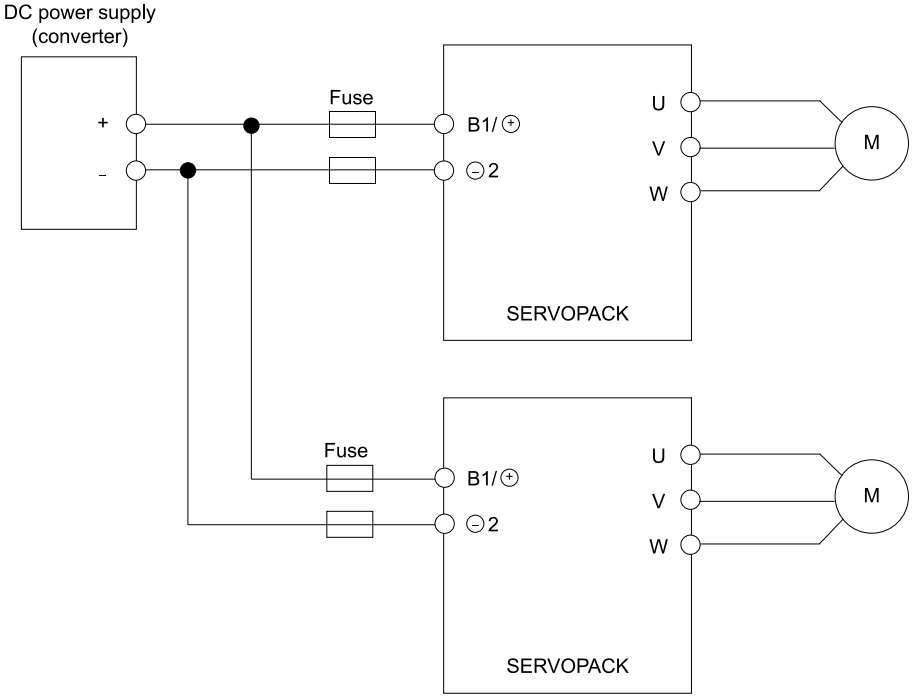
	2R8A	1.9	5.8						
	5R5A	3.2	9.7				3,5URGJ17/63UL	63	
	7R6A	4.5	14						

*1 This is the net value at the rated load.
*2 These fuses are manufactured by Mersen Japan.

■ Σ-XT SERVOPACKs

Main Circuit Power Supply	SERVOPACK Model: SGDXT-	Power Supply Capacity per SERVOPACK [kVA] *1	Current Capacity		Inrush Current		External Fuse		
			Main Circuit [Arms] *1	Control Power Supply [Arms]	Main Circuit [A0-p]	Control Power Supply [A0-p]	Order Number *2	Current Rating [A]	Voltage Rating [Vdc]
270 VDC	1R6A	1.8	4.5	0.3	34	57	3,5URGJ17/ 40UL	40	400
	2R8A	3.0	9.0						

*1 This is the net value at the rated load.
*2 These fuses are manufactured by Mersen Japan.



Note:
If you connect more than one SERVOPACK to the same DC power supply, connect fuses for each SERVOPACK.

Magnetic Contactors

Use a magnetic contactor when you configure an external AC power supply sequence.

Note:
Always attach a surge absorber (e.g., a surge absorber unit) to the excitation coil of the magnetic contactor. Consult Fuji Electric FA Components & Systems Co., Ltd. for details.

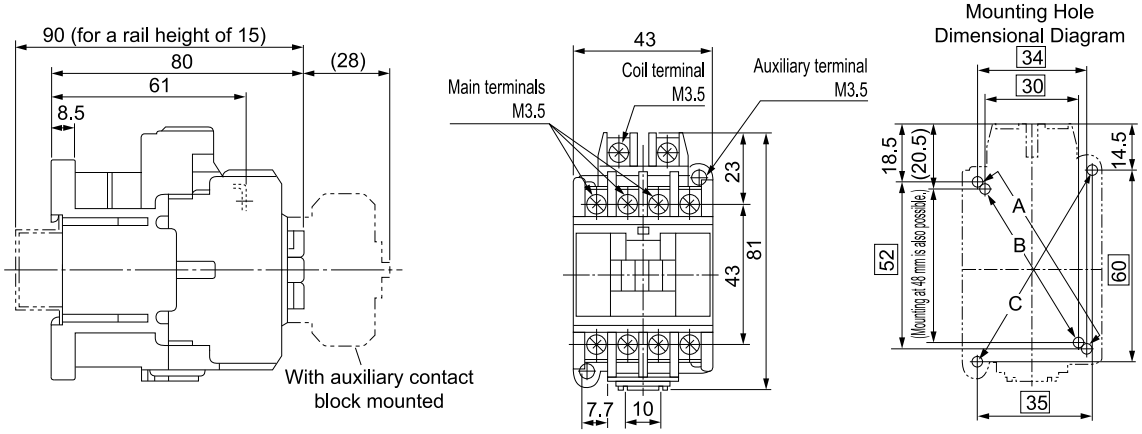
External Dimensions

■ Model: SC-03



Auxiliary Contacts	Contact Structure
1a	1b	
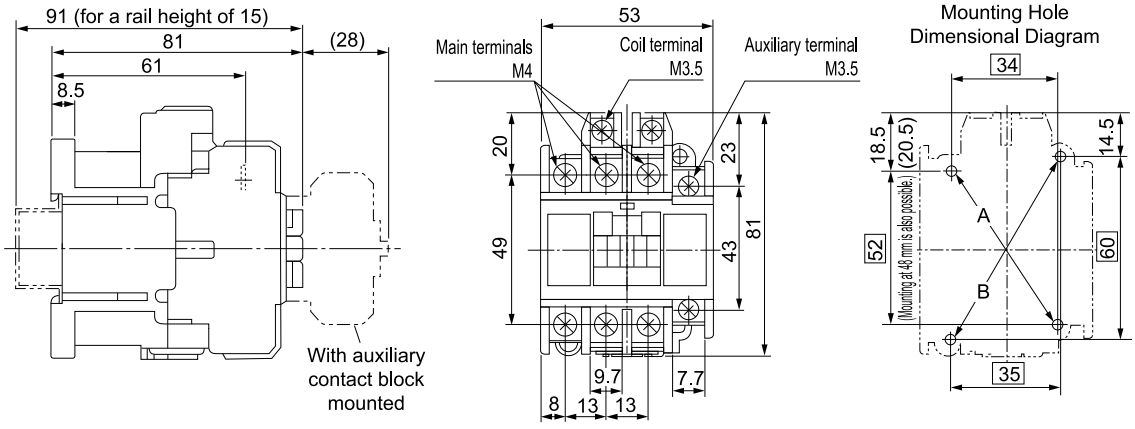
- You can use any of the following three mounting methods.
  A : 34 × (48 to) 52
  B : 30× 48
  C : 35× 60
- Mounting screws: 2 × M4
  Use two mounting holes in diagonally opposing corners to mount the magnetic contactor.

Unit: mm

Approx. mass: 0.32 kg

■ Model: SC-4-1



Auxiliary Contacts	Contact Structure
1a	1b	
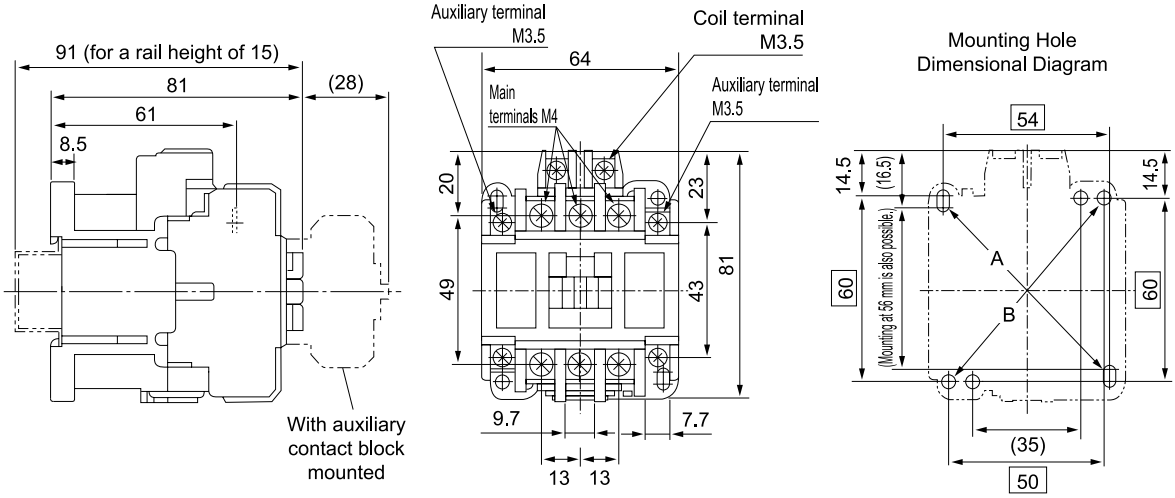
- You can use any of the following two mounting methods.
  A : 34 × (48 to) 52
  B : 35× 60
- Mounting screws: 2 × M4
  Use two mounting holes in diagonally opposing corners to mount the magnetic contactor.

Unit: mm

Approx. mass: 0.36 kg

■ Model: SC-5-1



Auxiliary Contacts	Contact Structure
2a	1a1b	2b	
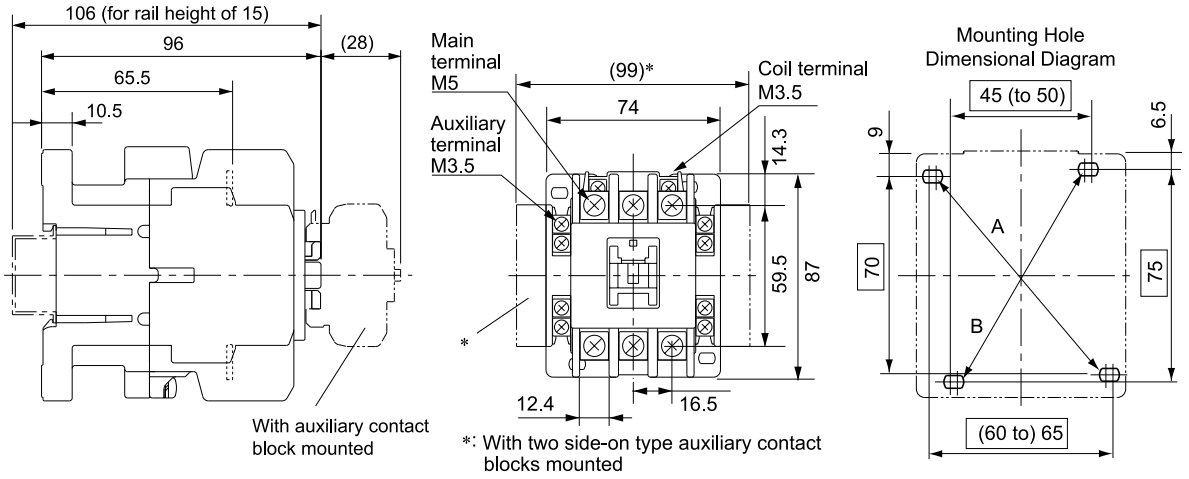
- You can use any of the following two mounting methods.
  A : 54 × (56 to) 60
  B : 50× 60
- Mounting screws: 2 × M4
  Use two mounting holes in diagonally opposing corners to mount the magnetic contactor.

Unit: mm

Approx. mass: 0.38 kg

■ Model: SC-N1, SC-N2



Auxiliary Contacts	Contact Structure
4a	2a2b	4b	
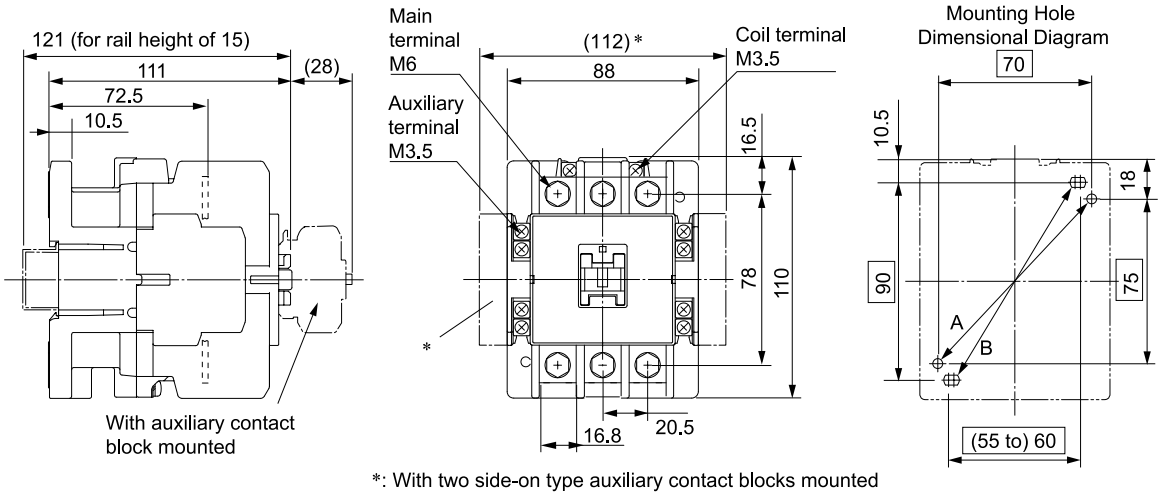
- You can use any of the following two mounting methods.
  A: 70 × 75
  B: (55 to) 65 × 90
- Mounting screws: 2 × M4
  Use two mounting holes in diagonally opposing corners to mount the magnetic contactor.

Unit: mm

Approx. mass: 0.59 kg

■ Model: SC-N2S, SC-N3



*: With two side-on type auxiliary contact blocks mounted

Auxiliary Contacts	Contact Structure
4a	2a2b	4b	
- You can use any of the following two mounting methods.
  A: 70 × 75
  B: (55 to) 60 × 90
- Mounting screws: 2 × M4
  Use two mounting holes in diagonally opposing corners to mount the magnetic contactor.

Unit: mm

Approx. mass: 1.1 kg

SERVOPACK Main Circuit Wires

This section describes the main circuit wires for SERVOPACKs.

Important

These specifications are based on IEC/EN 61800-5-1, UL 61800-5-1, and CSA C22.2 No.274.

1. To comply with UL standards, use UL-compliant wires.
2. Use copper wires with a rated temperature of 75°C or higher.
3. Use wires with a rated withstand voltage of 300 V or higher.

Note:

To use 600-V heat-resistant polyvinyl chloride-insulated wire (HIV), use the following table as reference for the applicable wires.

• The specified wire sizes are for three bundled leads when the rated current is applied with a surrounding air temperature of 40°C.

• Select the wires according to the surrounding air temperature.

	Ground Cable	⏚	AWG14 (2.0 mm²) or larger	M4	1.2 to 1.4

*1 Do not wire the following terminals: L1, L2, L3, B2, B3, ⊖1, and ⊖ terminals.
*2 If you do not use the recommended servomotor main circuit cable, use this table to select wires.

Wire Types

The following table shows the wire sizes and allowable currents for three bundled leads.

HIV Specifications *1		Allowable Current at Surrounding Air Temperatures [Arms]		
Nominal Cross-Sectional Area [mm²]	Configuration [Wires/mm]	30°C	40°C	50°C
0.9	7/0.4	15	13	11
1.25	7/0.45	16	14	12
2.0	7/0.6	23	20	17
3.5	7/0.8	32	28	24
5.5	7/1.0	42	37	31
8.0	7/1.2	52	46	39
14.0	7/1.6	75	67	56
22.0	7/2.0	98	87	73
38.0	7/2.6	138	122	103

*1 This is reference data based on JIS C3317 600-V-grade heat-resistant polyvinyl chloride-insulated wires (HIV).

Crimp Terminals and Insulating Sleeves

If you use crimp terminals for wiring, use insulating sleeves. Do not allow the crimp terminals to come close to adjacent terminals or the case.

To comply with UL standards, you must use UL-compliant closed-loop crimp terminals and insulating sleeves for the main circuit terminals. Use the tool recommended by the crimp terminal manufacturer to attach the crimp terminals.

The following tables give the recommended tightening torques, closed-loop crimp terminals, and insulating sleeves in sets. Use the set that is suitable for your model and wire size.

Noise Filter

Noise filters are used to reduce external noise that can enter on the power supply line or conductive noise from the SERVOPACK.

Important

Some noise filters have large leakage currents. The grounding conditions also affect the amount of the leakage current. If necessary, select an appropriate leakage detector or earth leakage circuit breaker taking into account the grounding conditions and the leakage current from the noise filter.

Selection Table

■ Σ-XS SERVOPACKs

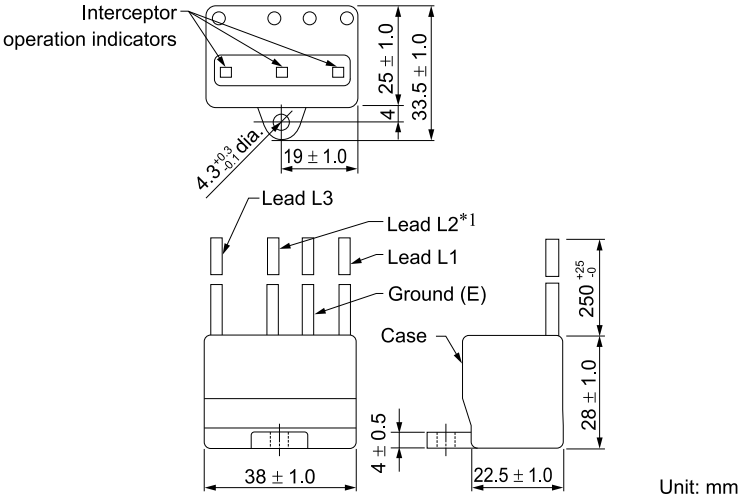
Surge Absorbers

A surge absorber absorbs lightning surge voltages and other abnormal voltages from the power supply input line to prevent faulty operation in or damage to electronic circuits.

Selection Table

Main Circuit Power Supply	SERVOPACK Model: SGDXS- SGDXW- SGDXT-	Order Number (Recommended Product)	Manufacturer	Inquiries
Three-phase, 200 VAC	□□□A	LT-C32G801WS	Soshin Electric Co., Ltd.	Yaskawa representative
Single-phase, 200 VAC		LT-C12G801WS		

External Dimensions

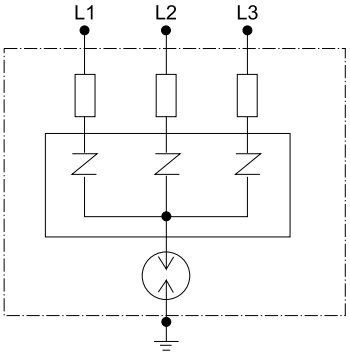


*1 The LT-C12G801WS does not have lead L2.

Note:

The wire size for all of the leads (L1, L2, and L3) and the ground wire (E) is AWG16 (UL1015).

Internal Cables Connections



Regenerative Resistor

If the regenerative power exceeds the amount that can be absorbed by charging the smoothing capacitor, a regenerative resistor is used.

Specifications of Built-in Regenerative Resistors in SERVOPACKs

The following table gives the specifications of the built-in regenerative resistors in the SERVOPACKs and the amount of regenerative power (average values) that they can process.

SERVOPACK Model:	Built-in Regenerative Resistor		Regenerative Power Processing Capacity of Built-in Regenerative Resistor [W]	Minimum Allowable Resistance [Ω]
SGDXS-	Resistance [Ω]	Capacity [W]		
R70A, R90A, 1R6A, 2R8A	-	-	-	40

RH120 (Model) 10Ω (Resistance) J

Resistance Tolerance	
Code	Specification
K	±10%
J	±5%
H*1	±3%

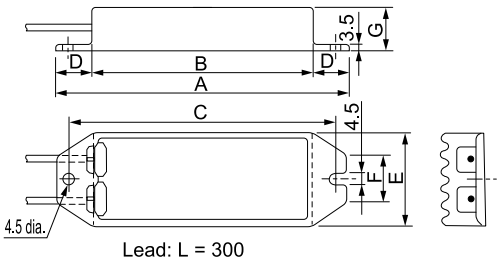
*1 An external regenerative resistor with resistance tolerance H (±3%) is not available for the RH450FY.

■ Specification

Item	Specification
Resistance Tolerance	K: ±10%, J: ±5%, H: ±3%
Temperature Resistance Characteristics	At less than 20 Ω: ±400 PPM/°C, at 20 Ω or higher: ±260 PPM/°C
Withstand Voltage	2,000 VAC/1 min, ΔR: ±(0.1% + 0.05 Ω)
Insulation Resistance	500 VDC, 20 MΩ min.
Short-Duration Overload	10 times the rated power applied for 5 s: ΔR: ±(2% + 0.05 Ω)
Service Life	1,000 hours at ratings, 90 min ON, 30 min OFF: ΔR: ±(5% + 0.05 Ω)
Flame Resistance	There must be no ignition when 10 times the rated power is applied for 1 min.
Surrounding Air Temperature Range	-25°C to 150°C

■ External Dimensions

◆ Model: RH120, 150, 220



Model	Rated Power	Resistance Range	Wire Size
RH120	70 W	1 Ω to 100 Ω	AWG16 (1.25 mm²)
RH150	90 W		AWG14 (2.0 mm²)
RH220	120 W		AWG16 (1.25 mm²)

External Dimensions [mm]							Mass
A	B	C	D	E	F	G	
182	150	172	16	42	22	20	282 g

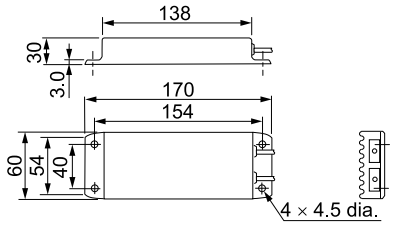
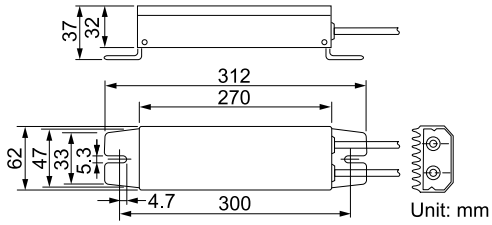
◆ Model: RH220B



Unit: mm

Lead: L = 500
Rated power: 120 W
Resistance range: 1 Ω to 100 Ω
Wire size: AWG14 (2.0 mm²)
Mass: 495 g

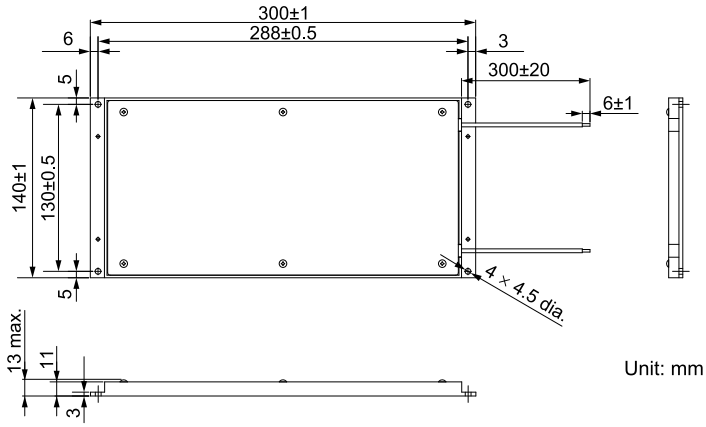
◆ Model: RH300C



Unit: mm

Lead: L = 300
Rated power: 200 W
Resistance range: 1 Ω to 10 kΩ
Wire size: AWG14 (2.0 mm²)
Mass: 850 g

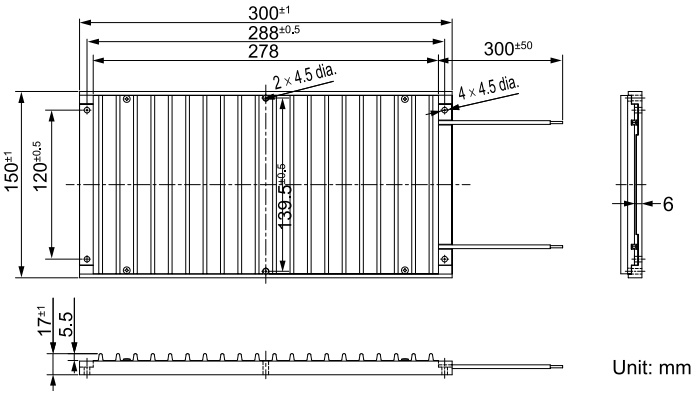
◆ Model: RH450



Unit: mm

Lead: L = 300
Rated power: 150 W
Resistance range: 1 Ω to 100 Ω
Wire size: AWG14 (2.0 mm²)
Mass: 880 g

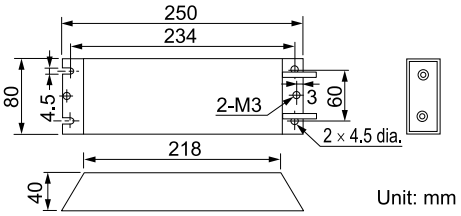
◆ Model: RH450FY



Lead: L = 300
Rated power: 150 W
Resistance range: 2 Ω to 100 Ω
Wire size: AWG14 (2.0 mm²)
Mass: 1.3 kg

Unit: mm

◆ Model: RH500



Lead: L = 450
Rated power: 300 W
Resistance range: 2 Ω to 50 Ω
Wire size: AWG14 (2.0 mm²)
Mass: 1.4 kg

Unit: mm

■ Regenerative Resistor Unit

Refer to the following table for the specifications of regenerative resistor units.

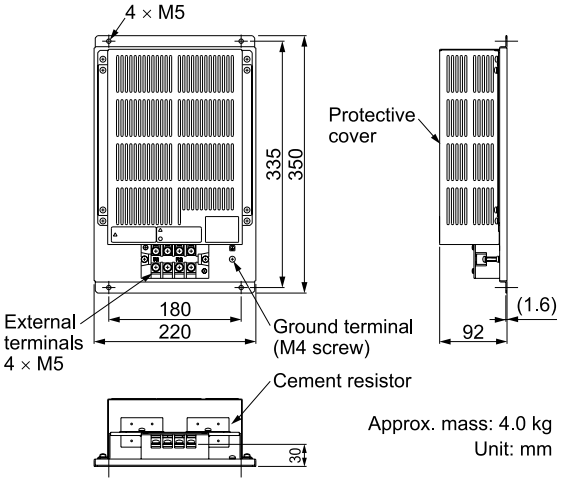
You do not need to change the setting of Pn600 (Regenerative Resistor Capacity) and Pn603 (Regenerative Resistance) when you use a regenerative resistor unit.

SERVOPACK Model: SGDXS-	Regenerative Resistor Unit Model	Specification	Allowable Power Loss
470A *1	JUSP-RA29-E	5 Ω, 880 W	180 W
550A, 590A, 780A	JUSP-RA05-E	3.13 Ω, 1760 W	350 W

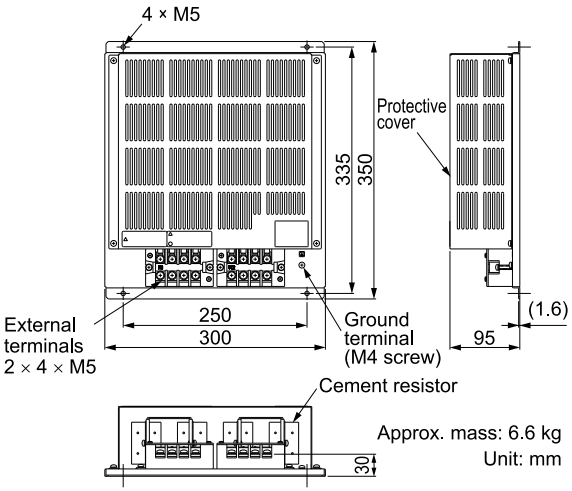
*1 Depending on the servomotor rotation speed, JUSP-RA04-E (6.25 Ω, 880 W) can be used. You need to change the setting of Pn603 (Regenerative Resistance) when you use JUSP-RA04-E (6.25 Ω, 880 W).

◆ External Dimensions

○ JUSP-RA29-E



○ JUSP-RA05-E



Digital Operators

A digital operator is used to display and set parameters in a SERVOPACK, and its main functions are as follows.

- Changing and accessing the settings of parameters in the SERVOPACK
- Reading, writing, and verifying the settings of parameters in the SERVOPACK
- Operating the SERVOPACK
- Adjustment with SERVOPACK utility functions
- Monitoring the operating conditions of the SERVOPACK

There are two types of digital operators.

- JUSP-OP07A-E
- JUSP-OP05A-1-E (can be used with analog voltage/pulse train reference SERVOPACKs only)

Information The JUSP-OP05A-1-E and JUSP-OP07A-E cannot be connected at the same time.

Important The digital operator is used for test operation and maintenance. It is not intended to be installed into equipment and used continuously together with the SERVOPACK.

Type: JUSP-OP07A-E

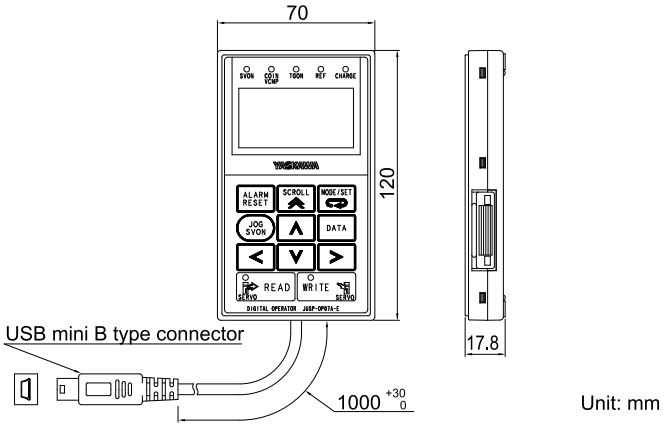
The JUSP-OP07A-E is used by connecting to the CN7 connector on the SERVOPACK.

Information If it is used in an environment with high levels of noise, implement noise countermeasures such as inserting a ferrite core.

■ Selection Table

Order Number	Accessories
JUSP-OP07A-E	Connection cable (1 m)

■ Dimensional Drawing



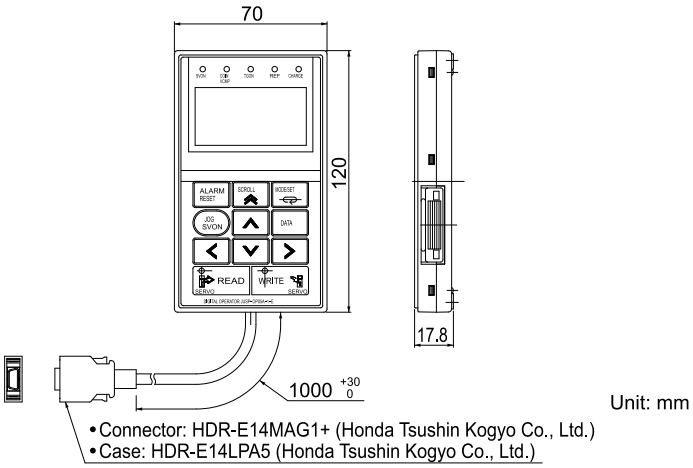
Type: JUSP-OP05A-1-E

The JUSP-OP05A-1-E is used by connecting to the Σ-XS SERVOPACK analog voltage/pulse train reference connector (CN3).

■ Selection Table

Order Number	Accessories
JUSP-OP05A-1-E	Connection cable (1 m)

■ Dimensional Drawing



Unit: mm

- Connector: HDR-E14MAG1+ (Honda Tsushin Kogyo Co., Ltd.)
- Case: HDR-E14LPA5 (Honda Tsushin Kogyo Co., Ltd.)

Software

SigmaSize+: AC Servo Capacity Selection Program

You can use the SigmaSize+ to select servomotors and SERVOPACKs. Applicable to all standard servo products sold by Yaskawa.

You can also calculate whether an external regenerative resistor is required and select one.

Note:

Contact your Yaskawa representative for information on SigmaSize+.

■ Features

- Provides a vast amount of new product information.
- Lets you select servo products with a wizard.
- You can access and reuse previously entered data.

■ System Requirements

Item	System Requirement
Browser	Internet Explorer version 10 or later
OS	Windows Vista/Windows 7 (32-bit or 64-bit edition)
CPU	Pentium 200 Mhz min.
Memory	64 MB min. (96 MB or greater recommended)
Available Hard Disk Space	20 MB min.

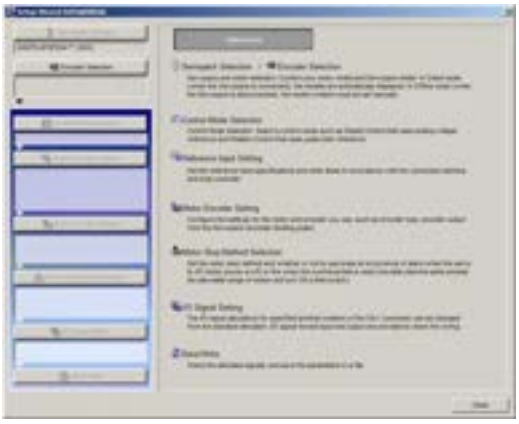
SigmaWin+: AC Servo Drive Engineering Tool

The SigmaWin+ engineering tool is used to set up and optimally tune Yaskawa Σ-series servo drives.

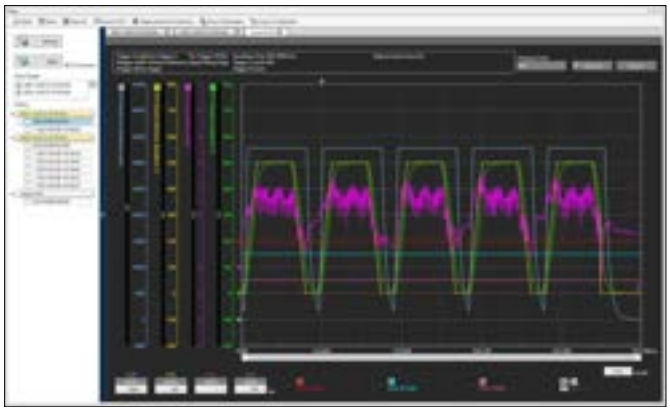
■ Features

- Sets parameters with a wizard.
- Displays SERVOPACK data on a computer just like on a oscilloscope.
- Estimates moments of inertia and measure vibration frequencies.
- Displays alarms and provides alarm diagnostics.

Sets parameters with a wizard.



Displays SERVOPACK data on a computer just like on a oscilloscope.



Estimates moments of inertia and measure vibration frequencies.

Displays alarms and provides alarm diagnostics.

◆ System Requirements

Item	System Requirements
Version	7
Supported Languages	Japanese, English, and Chinese (simplified)
OS	Windows 10, Windows 8.1, Windows 8, or Windows 7 (32-bit or 64-bit edition)
Software Environment	Microsoft .NET Framework 4.5, .NET Framework 4.6
CPU	1 GHz min. (recommended)
Memory	1 GB min. (recommended)
Available Hard Disk Space	500 MB min.
Browser used to display Help	Internet Explorer 9 or higher

MPE720: System Integrated Engineering Tool

MPE720 version 7 is a system integrated engineering tool that provides the complete development functionality to set up, adjust, program, maintain, and inspect not only controller programs but also all of the devices necessary to design machine installations, including servo drives, AC drives, and distributed I/O devices.

It is installed in a PC and operated on a PC interface through a connection between the PC and machine controller.

■ Features

◆ Performing Adjustment and Maintenance for All Equipment Drive Devices

MPE720 version 7 connected to the YRM-X or MP series enables one-stop setup, adjustment, and maintenance of AC servo drives, inverters, and I/O devices connected to the network. This eliminates the need change the connections, which improves efficiency.

◆ Greater Efficiency with the Best Programming Method

Ladder Programming

- The new user interface lets just about anyone easily use the MPE720.
- An improved EXPRESSION instruction simplifies programming calculation in ladder diagrams.
- Support is provided for all types of control, including position, speed, torque, and phase control.

Motion Programming

- Positioning and interpolation can be programmed with one instruction.
- Programs can be very easily edited using expressions in a text format.
- New variable programming can provide PC-like programming.

■ System Requirements

Item	Specification
CPU	1 GHz or more recommended (manufactured by Intel or other companies)
Memory Capacity	1 GB or more recommended *1
Available Hard Disk Space	700 MB or more (includes standard workspace memory after installation of MPE720)
Display Resolution	1,280 × 800 pixels or more recommended
CD Drive	CD Drive
1 (only for installation)	RS-232C, Ethernet, MP2100 bus, and USB
OS	Windows 10, Windows 8, Windows 8.1, or Windows 7 (32-bit or 64-bit)
.NET Environment	.NET Framework 4.5
Supported Languages	English and Japanese

*1 Expand memory if other application programs are run simultaneously with MPE720 on the same computer.
Performance may be slow due to the use of memory by multiple application programs that are run simultaneously.

Other Peripheral Devices and Options

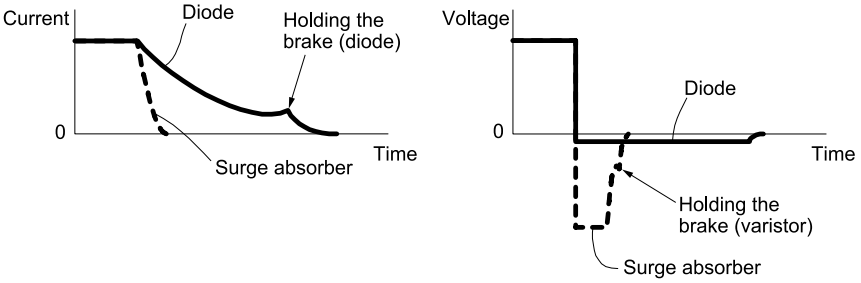
Surge Absorbers (Varistors) and Diodes for Holding Brake Power Supplies

Surge absorbers (varistors) and diodes for holding brake power supplies help prevent damage to brake coils caused by voltage surges.

If you use a servomotor with a holding brake and switch the brake power supply circuit on the DC side, connect a surge absorber (varistor) or diode that is suitable for the brake power supply voltage and current.

Note:

1. When you select a surge absorber, varistor, or diode for your application, consider the service life and test all operations, including the brake timing, before you use the servomotor.
2. If you connect an SSR (i.e., a semiconductor relay) to switch the brake circuit, use a diode.
3. If you connect a diode, more time is required to brake than with a surge absorber. (Refer to the following figure.) If you use a diode, consider this in the application.



■ Surge Absorbers (Varistors) for Holding Brake Power Supplies

Use the following table as reference in selecting a surge absorber. Elements were selected for a surge absorber surrounding air temperature range of -20°C to 60°C and an ON/OFF switching frequency of 10 times or less per minute. The information in this table is for reference only, and does not ensure operation in combination with the holding brake.

Holding Brake Power Supply Voltage		24 VDC	
Manufacturer		Nippon Chemi-Con Corporation	Semitec Corporation
		Order Number	
Brake Rated Current	1 A max.	TNR5V121K	Z5D121
	2 A max.	TNR7V121K	Z7D121
	4 A max.	TNR10V121K	Z10D121
	8 A max.	TNR14V121K	Z15D121

■ Diodes for Holding Brake Power Supplies

Select a diode for the holding brake power supply with a rated current that is greater than that of the holding brake and with the recommended withstand voltage given in the following table.

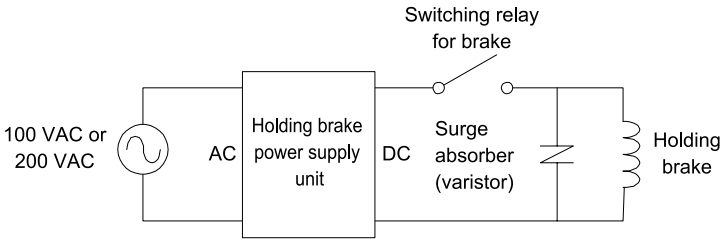
Diodes are not provided by Yaskawa.

Holding Brake Power Supply Unit Specifications		Withstand Voltage
Rated Output Voltage	Input Voltage	
24 VDC	200 V	100 V to 200 V

■ Circuit Diagrams

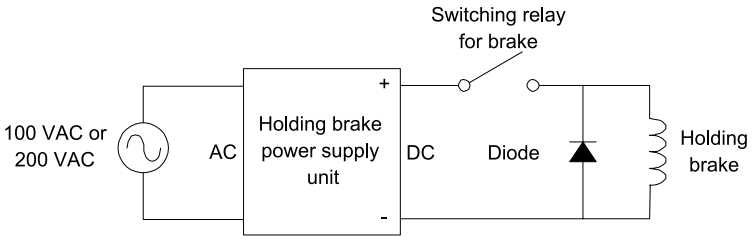
◆ Circuit for a Surge Absorber (varistor)

A surge absorber (varistor) has no polarity.



◆ Circuit for a Diode

A Diode has polarity. Refer to the following figure for connections.



Note:

Holding brake power supply units are not provided by Yaskawa.

Batteries for Servomotors with Absolute Encoders

If you use an absolute encoder, you can use an encoder cable with a battery unit connected to it to supply power and retain the absolute position data.

You can also retain the absolute position data by supplying power from a battery on the host controller.

Note:

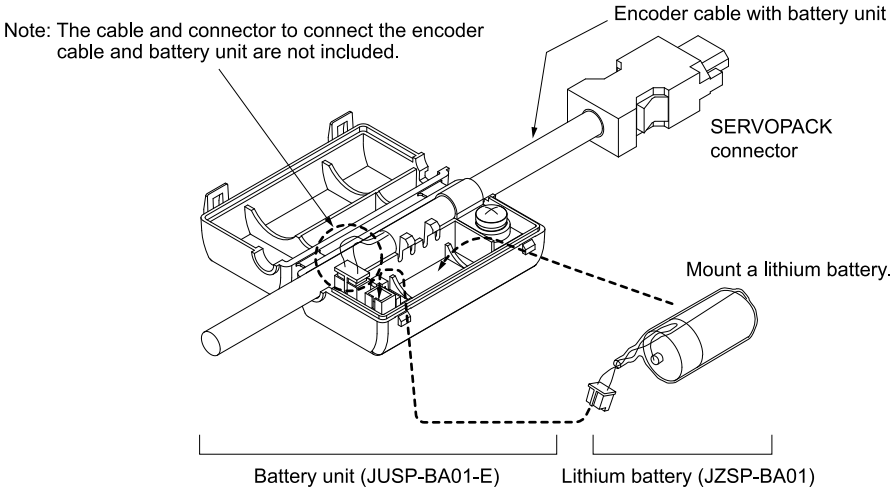
A battery unit is not required if you use a servomotor with a batteryless absolute encoder.

■ Using Encoder Cables with Battery Units

A battery unit is attached to an encoder cable with a battery unit. To replace the battery, obtain a lithium battery (JZSP-BA01) and mount it in the battery unit.

Important

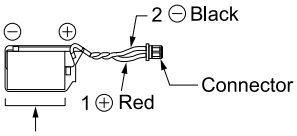
1. You cannot attach the battery unit to encoder cables for incremental encoders or batteryless absolute encoders.
2. Install the battery unit where the surrounding air temperature is between -5°C and 60°C.



◆ Selection Table

Name	Order Number	Remarks
Battery Unit (case only)	JUSP-BA01-E	The encoder cable and battery are not included. (This is a replacement part for a damaged battery unit.)
Lithium Battery	JZSP-BA01	This is a special battery that is mounted into the battery case.

◆ Lithium Battery Dimensional Drawing

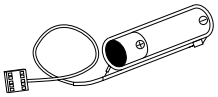


ER3V (3.6 V, 1,000 mAh, from Toshiba Battery Co., Ltd.)

■ When Installing a Battery on the Host Controller

Use a battery that meets the specifications of the host controller.

Use the recommended battery given in the following table or the equivalent.



◆ Selection Table

Order Number	Specification	Manufacturer
ER6VC3N	3.6 V, 2000 mAh	Toshiba Battery Co., Ltd.

Σ-LINK II-Related Devices

Equipment Configurations

Many types of connection methods are available for Σ-LINK II-related devices. An example of a device configuration diagram for each type is shown below.

Type	Reference
Connecting the SERVOPACK with a Single Servomotor	591
Connecting the SERVOPACK to Multiple Devices in a Daisy-Chain Connection	591
Connecting the SERVOPACK to Multiple Devices in a Star Connection	593
Using the Booster Unit for Connections	594
Relaying the Cable	594

Information
- Σ-7 compatible specification servomotors do not support Σ-LINK II communication. The servomotors described in this chapter are Σ-X standard specification servomotors.
- There are several types of device configuration diagrams besides those shown in this section, and the cables used vary depending on the connected devices.
  Refer to the following section for details on the cables used.
  ☞ *Cable List on page 614*

Number of Connections of Σ-LINK II-Related Devices

Directly Connecting Σ-LINK II Devices to the SERVOPACK

The number of connections depends on the node configuration. The number of connections in each node configuration is shown below.

Note:

There can be a maximum of only one relay between cables.

■ When Using a Σ-XS SERVOPACK

Connecting Σ-LINK II Devices to the SERVOPACK through the Booster Unit

When supplying power to Σ-LINK II devices by using a booster unit, the combinations of configurable devices can be increased over the configuration when Σ-LINK II devices are directly connected to the SERVOPACK. The additional connection configurations are given next.

■ When Using a Booster Unit with a Σ-XS SERVOPACK

You can connect a maximum of three nodes including one servomotor regardless of the types of nodes (sensor hub: digital I/O type or analog input type) you will connect.

■ When Using a Booster Unit with a Σ-XW SERVOPACK

You can connect a maximum of three nodes including a servomotor to one connector on the SERVOPACK side, regardless of the types of nodes you will connect.

You can connect a maximum of six nodes in total to CN2A and CN2B.

Information A booster unit is required for each SERVOPACK connector.
You can also use a booster unit for either CN2A or CN2B only.

■ When Using a Booster Unit with a Σ-XT SERVOPACK

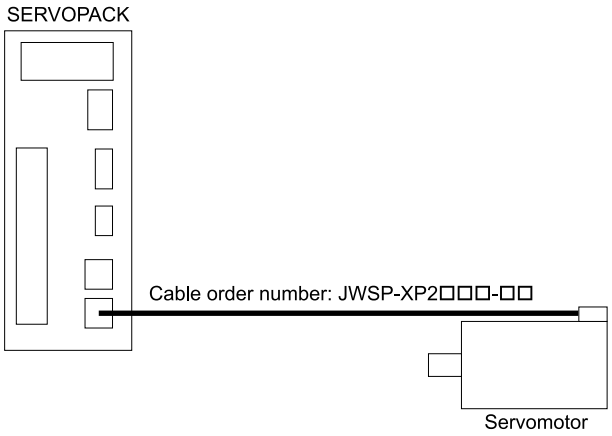
You can connect a maximum of three nodes including a servomotor to one connector on the SERVOPACK side, regardless of the types of nodes you will connect.

You can connect a maximum of four nodes in total to CN2A, CN2B, and CN2C.

Information A booster unit is required for each SERVOPACK connector.
You can also use a booster unit for only the desired connectors: CN2A, CN2B, and/or CN2C.

Connecting the SERVOPACK with a Single Servomotor

When connecting the SERVOPACK with a single servomotor, connect in the following way.



Connecting the SERVOPACK to Multiple Devices in a Daisy-Chain Connection

When connecting the SERVOPACK to multiple devices in a daisy-chain connection, use the two-stage connector of the servomotor or the communications expansion connector of the sensor hub to make connections in the following way.

Note:

- Only Σ-XW and Σ-XT SERVOPACKs can connect two servomotors.
- Only Σ-XT SERVOPACK can connect three servomotors.
- Connect only one analog input sensor hub per system.
- When you will use a Σ-X SERVOPACK as the master and you want to expand the Σ-LINK II communications cable between node and the total length of wiring, connect a booster unit between the SERVOPACK and devices.

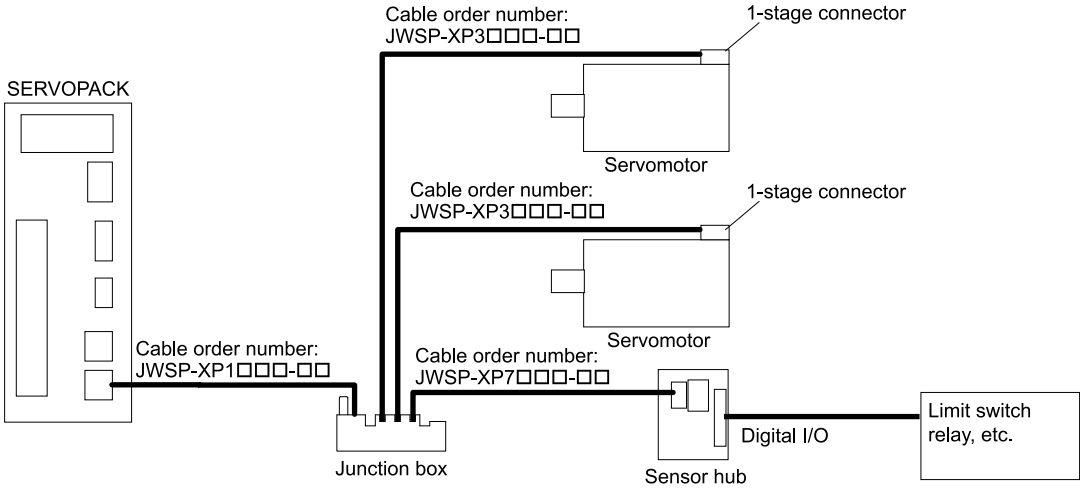
Connecting the SERVOPACK to Multiple Devices in a Star Connection

When connecting the SERVOPACK to multiple devices in a star connection, use the junction box and connect in the following way.

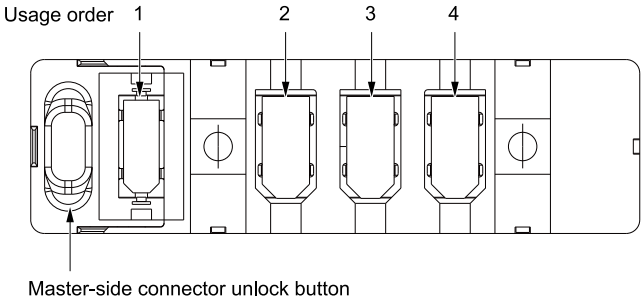
Note:

- Only Σ-XW SERVOPACK can connect two servomotors.
- Only Σ-XT SERVOPACK can connect three servomotors.
- Connect only one analog input sensor hub per system.
- When you will use a Σ-X SERVOPACK as the master and you want to expand the Σ-LINK II communications cable between node and the total length of wiring, connect a booster unit between the SERVOPACK and devices.



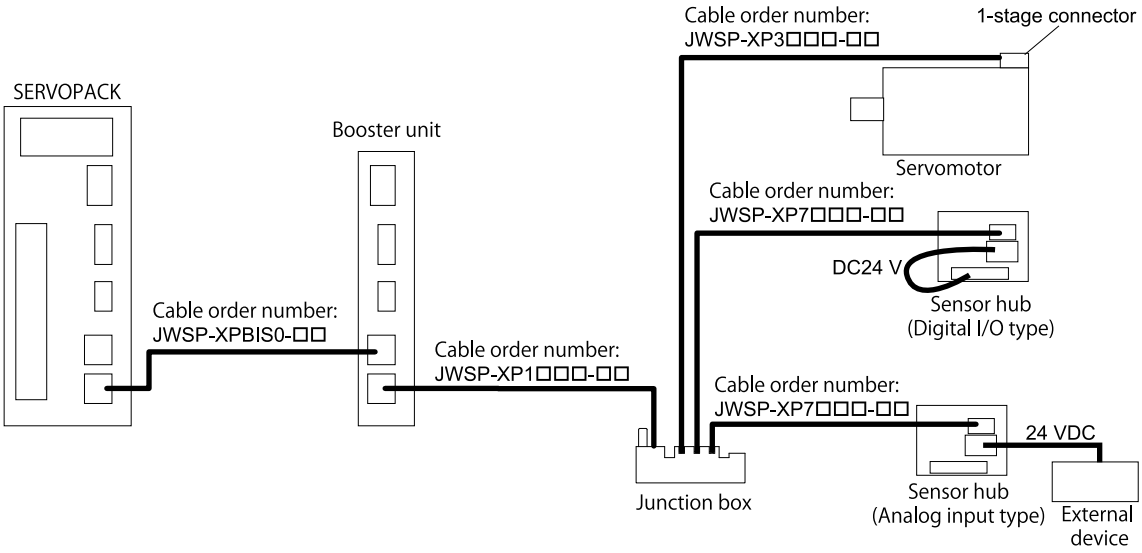
Important

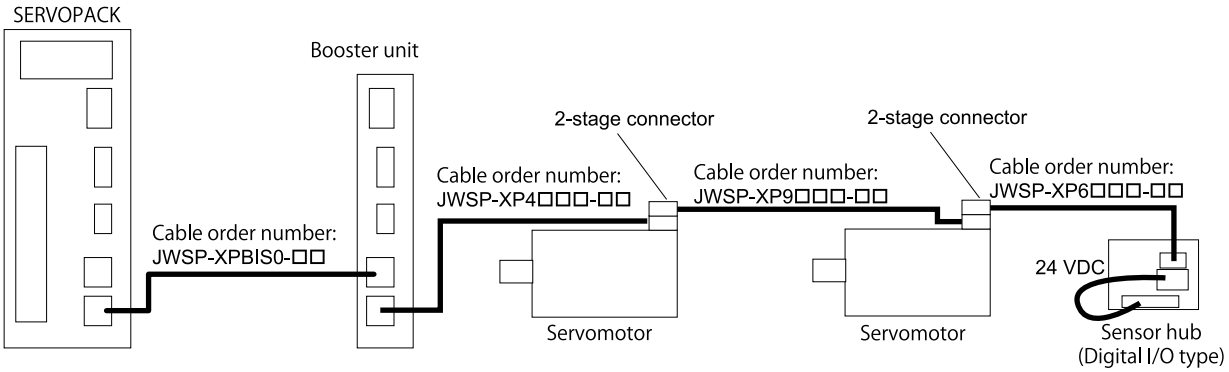
Use the junction boxes in order, starting with the one immediately next to the host controller-side connector unlock button. If there is an empty connector, the Σ-LINK II device connected behind the empty connector will not be recognized by the Σ-LINK II device on the host controller side.



Using the Booster Unit for Connections

When you will extend the length of the Σ-LINK II cables by using a booster unit, make the connections as shown below.





Relaying the Cable

Examples of the cables when using a daisy-chain connection are shown below.

When using a star connection and when making connections by using a booster unit, substitute the cables with an understanding of the combinations of cables that can be used for relaying.

The combinations of cables that can be used for relaying are given below.

Cable Length and Output Current

The cable length depends on the device to which power will be supplied, the node type, and the connection configuration. Select cables based on the cable length for the relevant configuration.

Supplying Power to Σ-LINK II Devices from the Booster Unit

■ Cable Length

The cable lengths when supplying power to Σ-LINK II devices from the SERVOPACK depend on the node configuration. The cable lengths in each node configuration are given below.

Note:

• There can be a maximum of only one relay between cables.

• If the cable lengths in the following table will be exceeded, use a booster unit.

Table .8 When Using a Σ-XS SERVOPACK

Node Configuration			Daisy-Chain Connection	Star Connection

■ Output Current

When power is supplied from the SERVOPACK, power cannot be supplied to external devices.

Supplying Power to Σ-LINK II Devices from the Booster Unit

The maximum cable length when supplying 24-V power to nodes using the booster unit and the output current when supplying power to external devices are given below.

■ Cable Length

The cable lengths are given below.

- Star Connection
  25 m or less from the booster unit to the junction box and between each node from the junction box
- Daisy-Chain Connection
  - When supplying power to Σ-LINK II devices from the booster unit:
    50 m or less from the booster unit to a node and between each node
  - When supply power from the booster unit to the digital outputs of the sensor hub or external devices connected to the sensor hub:
    15 m or less between each Σ-LINK II device (encoder and sensor hub) after the booster unit

Note:

If the above cable lengths will be exceeded, contact your Yaskawa representative.

■ Output Current

When using a booster unit, power can be supplied to the digital outputs of the sensor hub or external devices connected to the sensor hub.

When supplying operating power to the digital outputs of the sensor hub and external devices, the output current that can be supplied to the external devices depends on the number of connected Σ-LINK II devices. Use the devices according to the allowable output current values given in the following table.

Note:

If the output current will exceed the above values, contact your Yaskawa representative.

Equipment Configuration			Allowable Output Current
Σ-X-Series Servomotor	Sensor Hub (Digital I/O Type) JUSP-SL2HD440□A	Sensor Hub (Analog Input Type) JUSP-SL2HA400□A	
2	1	0	350mA
2	0	1	300mA
1	1	0	400mA
1	2	0	400mA
1	0	1	350mA
1	0	2	250mA
1	1	1	300mA
0	1	0	450mA
0	0	1	400mA
0	1	1	350mA

Refer to the following manual for details.

Σ-X-Series Σ-LINK II Booster Unit Instructions (Manual No.: TOMP C710812 08)

Sensor Hub

Use a sensor hub when connecting a commercially available analog or digital sensor.
The sensor hub is counted as a node in Σ-LINK II communications.

Interpreting Model Numbers

JUSP - SL2 H D4400 A A 1

- JUSP - SL2: Peripheral Device That Supports Σ-LINK II
- H: 1st digit
- D4400: 2nd to 6th digit
- A: 7th digit
- A: 8th digit

I/O Specifications

Item		Specification
Power Supply	Input Voltage	5 VDC to 24 VDC (4.0 V to 27.6 V) / 0.3 W (max) *1
		24 VDC ±15% / 0.56 A (max) *2
	Output Voltage	24 VDC ±15% / 0.5 A (max) *3

*1 Power is supplied from a SERVOPACK (Σ-X series) or Σ-LINK II host controller via the upstream communications connector (CN1). This power supply cannot be directly wired to the booster unit.

*2 This power supply provides power to the booster unit and Σ-LINK II downstream devices. Separately obtain a commercially available AC/DC power supply. Refer to the following section for details.

☞ *External 24-VDC Power Supply on page 607*

*3 Power is output via the downstream communications expansion connector (CN2). This power supply is used as output to Σ-LINK II downstream devices.

External 24-VDC Power Supply

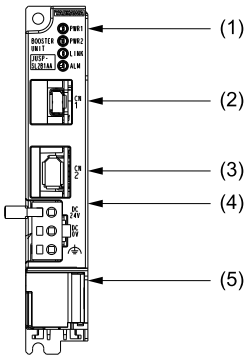
The external 24-VDC power supply connected to the booster unit to supply power to Σ-LINK II downstream devices must meet one of the following conditions.

- Use a class 2 power supply (compliance standard: UL 1310).
- Connect to a circuit with a maximum voltage of 30 Vrms and a peak voltage of 42.4 V that uses a UL 5085-3 (previous standard: UL 1585)-compliant class 2 transformer as a power supply.
- Use an isolated power supply with a maximum voltage of 30 Vrms and a peak voltage of 42.4 V that is isolated by double or reinforced insulation.

Appearance and Part Names

The following figure shows the appearance and part names of the booster unit.

Standard



No.	Name	Description
(1)	PWR1 (green)	Lit while the power supply is being input from the upstream side.
	PWR2 (green)	Lit while the power supply is being input from the downstream side.
	LINK (green)	Flashes while communicating with the host controller.
	ALM (orange)	Lit when there is an internal circuit error.
(2)	Upstream communications connector (CN1)	This connector is used to connect Σ-LINK II upstream devices.
(3)	Downstream communications connector (CN2)	This connector is used to connect Σ-LINK II downstream devices.

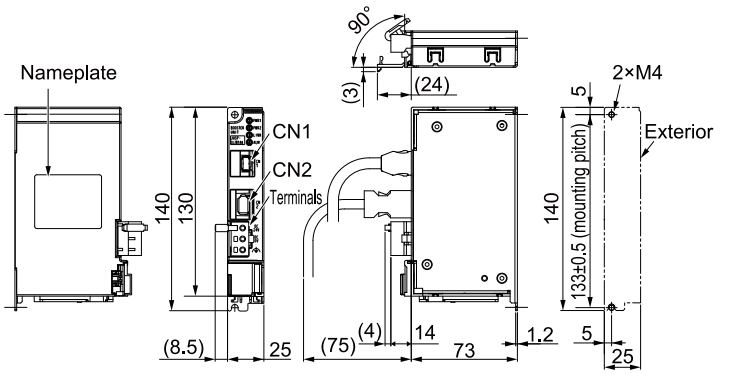
		24 VDC	This terminal is used to connect the external 24-VDC power supply.
		0 VDC	
		⏚ (Ground terminal)	The functional ground terminal. Connect this terminal for stable device operation.
(5)	Cover		Do not use. Do not open the cover.

External Dimensions

The external dimensions of the booster unit are given in the following figures.



Mounting Hole Diagram

Approx. mass: 0.25 kg
Unit: mm

Junction Box

Use when connecting Σ-LINK II-related devices with a star connection.
Not counted as a node in Σ-LINK II communications.

Interpreting Model Numbers

JUSP - SL2 J 3 A A

Peripheral Device That Supports Σ-LINK II

1st digit 2nd digit 3rd digit 4th digit

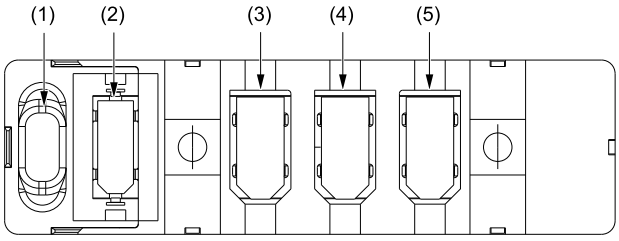
Digit	Item	Symbol	Specification
1st digit	Device Type	J	Σ-LINK II junction box
2nd digit	Number of Junctions	3	Three junctions
3rd digit	Custom Specifications	A	Standard specification
4th digit	Design Revision Order	A	First release product

Specification

Item	Specification	
Model	JUSP-SL2J3AA	
Number of Input Ports	1	
Number of Output Ports	3	
Surrounding Air Temperature	-5°C to 60°C	
Storage Temperature	-20°C to 85°C	
Surrounding Air Humidity	5% to 95% relative humidity max.	There must be no freezing or condensation.
Storage Humidity	5% to 95% relative humidity max.	
Vibration Resistance	Acceleration amplitude: 5.9 m/s^2 (0.6 G)	
Impact Resistance	Acceleration amplitude: 147 m/s^2 (15 G)	
Degree of Protection	IP20	• Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
Pollution Degree	2	
Altitude	2000 m max.	
Overvoltage Category	I	
Others	Do not use the junction box in the following locations: Locations subject to static electricity noise, strong electro-magnetic/magnetic fields, or radioactivity	

Appearance and Part Names

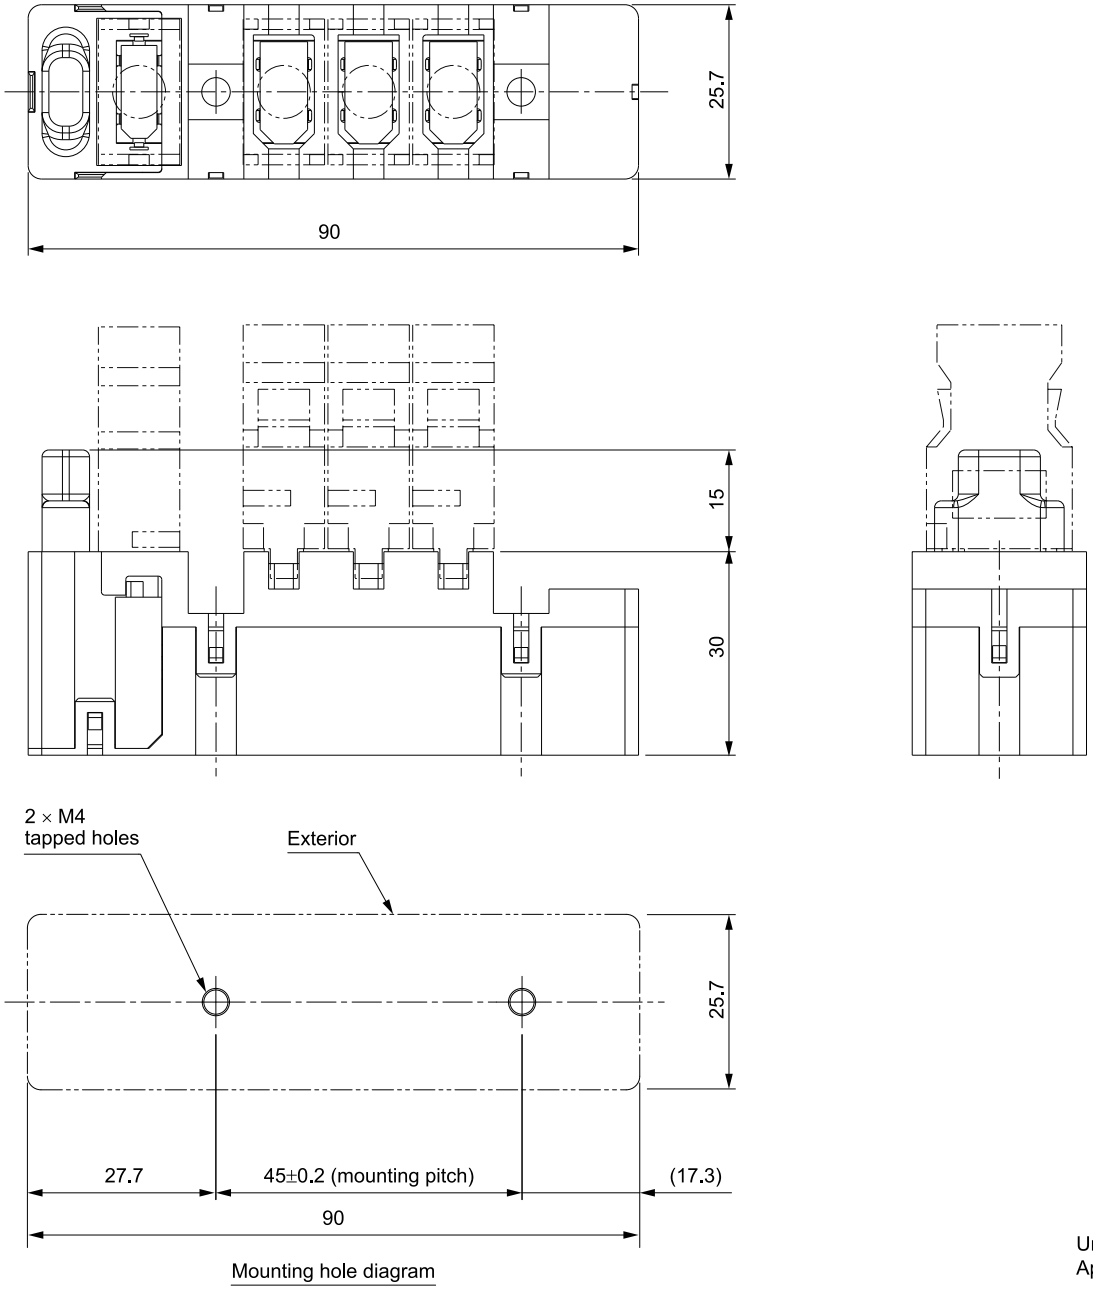
The following figure shows the appearance and part names for the junction box.



No.	Name	Description
(1)	Upstream connector unlock button	This button unlocks the upstream connector lock.
(2)	Upstream connector	This connector is used to connect with Σ-LINK II upstream devices.
(3)	Downstream connector 1	This connector is used to connect with Σ-LINK II downstream devices. Use the connectors in order, starting with connector 1. If there is an empty connector, the Σ-LINK II device connected behind the empty connector will not be recognized by the Σ-LINK II device on the host controller side.
(4)	Downstream connector 2	
(5)	Downstream connector 3	

External Dimensions

The dimensions of the junction box are given in the following figure.

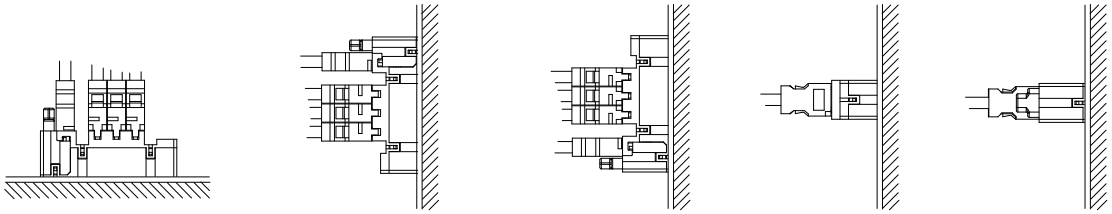


Unit: mm
Approx. mass: 0.1 kg

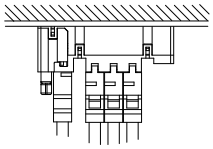
Mounting Direction

Mount the junction box so that the cable will not point downward.

- Correct



- Incorrect



Σ-LINK II Communications Cable

Cable List

Cables used in the connection of Σ-LINK II-related devices differ in the following ways depending on if they are being used with target devices connected on the upstream side or the downstream side and depending on the cables.

Upstream side	Downstream side	Model	Reference
SERVOPACK	Servomotor (1-stage connector)	JWSP-XP2□□□-□□	614
	Servomotor (lower stage of 2-stage connector)	JWSP-XP4□□□-□□	617
	Sensor hub, junction box, relay cable	JWSP-XP1□□□-□□	620
	Booster unit	JWSP-XPBIS0-□□	622
Servomotor (upper stage of 2-stage connector)	Servomotor (1-stage connector)	JWSP-XP8□□□-□□	623
	Servomotor (lower stage of 2-stage connector)	JWSP-XP9□□□-□□	624
	Sensor hub, junction box, relay cable	JWSP-XP6□□□-□□	625
Sensor hub, junction box, relay cable	Servomotor (1-stage connector)	JWSP-XP3□□□-□□	626
	Servomotor (lower stage of 2-stage connector)	JWSP-XP5□□□-□□	627
	Sensor hub, junction box, relay cable	JWSP-XP7□□□-□□	628
Booster unit	Servomotor (lower stage of 2-stage connector)	JWSP-XP4□□□-□□	628
	Sensor hub, junction box, relay cable	JWSP-XP1□□□-□□	629

Note:

When supplying power to Σ-LINK II devices from the SERVOPACK, there can be a maximum of only one relay between cables.

Information There are two types of connectors that connect to the servomotor: 1-stage connectors and 2-stage connectors.

A 1-stage connector is used when there is no device to be connected downstream from the servomotor.

A 2-stage connector is used when there is a device to be connected downstream from the servomotor.

SERVOPACK ⇔ Servomotor (1-Stage Connector)

There are two types of cables that are used to connect the SERVOPACK with servomotors: One for batteryless absolute encoders and one for absolute encoders.

Information The same cable is used as the cable between the booster unit and servomotor (1-stage connector).

Encoder Cables for batteryless absolute encoders

■ Selection Table

Cable Direction	Length (L)	Order Number *1	
		Standard Cable	Flexible Cable *2 *3
SGMXJ, SGMXA-A5 to -10, SGMXP: Load side SGMXA-15 to -50, SGMXG: Left side *4	3 m, 5 m, 10 m, 15 m, 20 m, 30 m, 40 m, 50 m	JWSP-XP2IS1-□□	JWSP-XP2IF1-□□
SGMXJ, SGMXA-A5 to -10, SGMXP: Non-load side SGMXA-15 to -70, SGMXG: Right side		JWSP-XP2IS2-□□	JWSP-XP2IF2-□□

*1 Replace the boxes (□□) in the order number with the cable length (03, 05, 10, 15, 20, 30, 40, or 50).

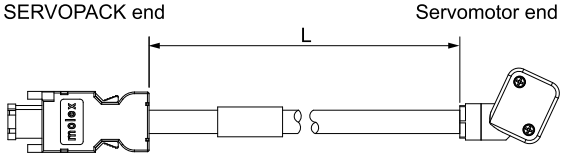
*2 Use flexible cables for moving parts of machines, such as robots.
*3 The recommended bending radius (R) is 46 mm or larger.
*4 An encoder cable installed toward the left side cannot be used for the SGMXA-70 (7.0 kW). Use an encoder cable installed toward the right side.

Note:

The JZSP-UCMP00-□□-E and JZSP-CSP12-E cables cannot be connected.

Information A cable installation direction on the right side or left side refers to the cable installation direction when viewed from the connector side with the shaft at the top.

■ Appearance



Note:

The above figure shows the case when the cable is installed on the non-load side.

Booster Unit ⇔ Servomotor (Lower Stage of 2-Stage Connector)

This cable is the same as the cable between the SERVOPACK and servomotor (lower stage of 2-stage connector).

If an absolute encoder will be used, make sure to connect an absolute encoder cable. This is because power is not supplied to the booster unit, even if a battery is connected to the host controller.

Refer to the following section for details on the cables.

☞ *SERVOPACK ⇔ Servomotor (Lower Stage of 2-Stage Connector) on page 617*

Booster Unit ⇔ Sensor Hub, Junction Box

This cable is the same as the cable between the SERVOPACK and sensor hub, junction box, or relay cable.

If an absolute encoder is included in the connected nodes, make sure to connect an absolute encoder cable. This is because power is not supplied to the booster unit, even if a battery is connected to the host controller.

Refer to the following section for details on the cables.

☞ *SERVOPACK ⇔ Sensor Hub, Junction Box, Relay Cable on page 620*

Option Modules

Feedback Option Modules

Fully-Closed Modules

You can perform fully-closed loop control by combining a fully-closed module and SERVOPACK. Fully-closed loop control is used to perform high-accuracy, high-response position control by using a position feedback signal from a linear encoder or absolute rotary encoder mounted to the machine.

Model Designations

■ Purchasing a Module in a Set with the SERVOPACK

To order SERVOPACKs with a fully-closed module attached, use the following model numbers.

SGDXS *1 | R70 (1st+2nd+3rd digits) | A (4th digit) | 00 (5th+6th digits) | A (7th digit) | 0000 (8th+9th+10th+11th digits) | 001 (12th+13th+14th digits)

Σ-X-series Σ-XS model

1st+2nd+3rd digits Maximum Applicable Motor Capacity

Voltage	Code	Specification
Three-Phase, 200 VAC	R70*2	0.05 kW
	R90*2	0.1 kW
	1R6*2	0.2 kW
	2R8*2	0.4 kW
	3R8	0.5 kW
	5R5*2	0.75 kW
	7R6	1.0 kW
	120	1.5 kW
	180	2.0 kW
	200	3.0 kW
	330	5.0 kW
	470	6.0 kW
	550	7.5 kW

4th digit Voltage

Code	Specification
A	200 VAC

5th+6th digits Interface

Code	Specification
00	Analog voltage/ pulse train reference
40	MECHATROLINK-4/III communications reference
A0	EtherCAT communications reference

7th digit Design Revision Order

A

8th+9th+10th+11th digits Hardware Options Specification

Code	Specification	Applicable Models
None	Without options	All models
0000		
0001	Rack-mounted	SGDXS- R70A to -330A
	Duct-ventilated	SGDXS- 470A to -550A
0002	Varnished	All models
0008	Single-phase, 200-VAC power supply input	SGDXS-120A
0020*3	No dynamic brake	SGDXS- R70A to -2R8A
	External dynamic brake resistor	SGDXS- 3R8A to -550A

12th+13th+14th digits Option Module

Code	Specification
001	Fully-closed module

*1 The model number of a SERVOPACK with an option module is not hyphenated after SGDXS.
*2 You can use these models with either a single-phase or three-phase input.
*3 For details, refer to the following manual.

Σ-X-Series Σ-XS/Σ-XW SERVOPACK with Dynamic Brake Hardware Option Specifications Product Manual (Manual No.: SIEP C710812 14)

Note:

Contact your Yaskawa representative for information on combining options.

■ Purchasing a Module Separately

When ordering a SERVOPACK and a fully-closed module separately, use the following fully-closed module model number.

SGDV-OFA01A

Important
- One option case kit is required for each SERVOPACK.
  Option case kit model: SGDXS-OZA01A
- A fully-closed module does not support Σ-LINK II communications.

Basic Specifications

Item		Specification	
Operating Conditions	Surrounding Air Temperature	0°C to 55°C	
	Storage Temperature	-20°C to 85°C	
	Surrounding Air Humidity	90% relative humidity max.	There must be no freezing or condensation.
	Storage Humidity	90% relative humidity max.	
	Vibration Resistance	4.9 m/s^2	
	Impact Resistance	19.6 m/s^2	
	Degree of Protection	IP10	• Must be no corrosive or flammable gases. • Must be no exposure to water, oil, or chemicals. • Must be no dust, salts, or iron dust.
	Pollution Degree	2	
	Altitude	1000 m max.	
	Others	Do not use the junction box in the following locations: Locations subject to static electricity noise, strong electromagnetic/magnetic fields, or radioactivity	

Pin Arrangement of External Encoder Connector (CN31)

The following table lists the signal names and functions.

Pin No.	Signal	Function
1	PG5V	Encoder power supply +5 V
2	PG0V	Encoder power supply 0 V
3	–	–
4	–	–
5	PS	Serial data (+)
6	/PS	Serial data (-)
Shell	Shield	–

Recommended Encoders

- Linear encoders
  Refer to the following section for the recommended linear encoder models and specifications.
  ☞ *Recommended Linear Encoders on page 382*
- Rotary Encoders
  - Absolute Rotary Encoders
    The following absolute rotary encoders are for fully-closed control. Do not use it to control the motor.

Output Signals	Manufacturer	Rotary Encoder Type	Model			Resolution Bits	Maximum Motor Speed *1 min-1
			Scale	Sensor Head	Relay Device between Fully-Closed Module and Rotary Encoder		
Encoder for Yaskawa's Serial Interface	Magnescale Co., Ltd.	Sealed	RU77-4096ADF *2		–	20	2000
			RU77-4096AFFT01 *2		–	22	2000
	Dr. JOHANNES HEIDENHAIN GmbH	Exposed	ECA4412 *2		EIB3391Y	27	1600
					EIB3391Y	28	800
					EIB3391Y	29	400
		Sealed	RCN2310 *2		EIB3391Y	26	3000
			RCN5510 *2		EIB3391Y	28	800
			RCN8310 *2		EIB3391Y	29	400
			ROC2310 *2		EIB3391Y	26	3000
			ROC7310 *2		EIB3391Y	28	800
	Renishaw PLC	Exposed	RA23Y-□□□□□□□□□ *2		–	23	14600
			RA26Y-□□□□□□□□□ *2		–	26	3250
			RA30Y-□□□□□□□□□ *2		–	30	200

*1 The maximum speeds given in the above table are the maximum applicable speeds of the encoders when combined with a Yaskawa SERVOPACK.
The actual speed will be restricted by either the maximum speed of the rotary servomotor or the maximum speed of the rotary encoder (given above).

*2 This is a single-turn absolute encoder.

Note:

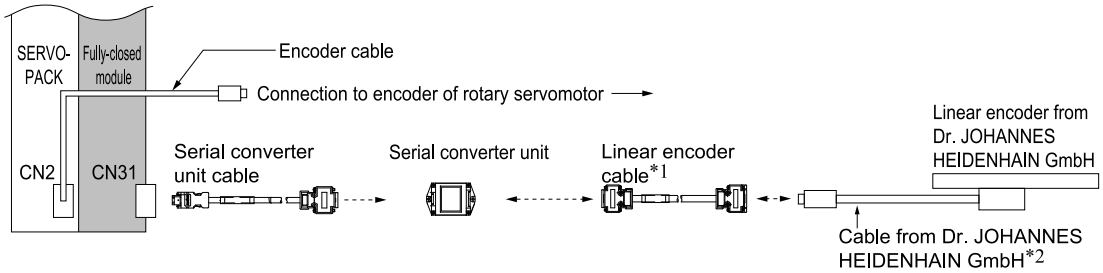
Confirm detailed specifications, such as the tolerances, dimensions, and operating environment, with the manufacturer of the rotary encoder before you use it.

Equipment Configurations

■ Connections to Linear Encoder from Dr. JOHANNES HEIDENHAIN GmbH

◆ Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa serial converter unit. The output signal will be multiplied by 8 bits (256 divisions) in the serial converter unit.



*1 When using a JZDP-J00□-□□□ serial converter unit, do not use a Yaskawa linear encoder cable that is longer than 3 m.
*2 Contact Dr. JOHANNES HEIDENHAIN GmbH for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Dr. JOHANNES HEIDENHAIN GmbH.

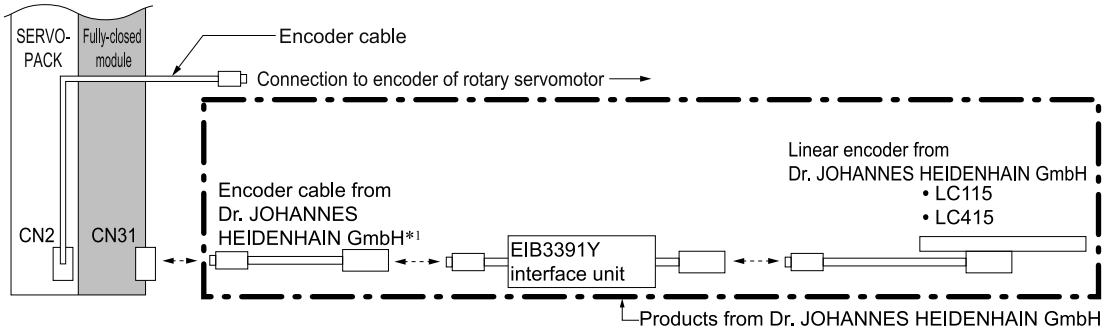
*1 The model number of a set that includes the SERVOPACK and an option module is not hyphenated after "SGDXS."
*2 When ordering a SERVOPACK and a fully-closed module separately, use this fully-closed module model number.
*3 One option case kit is required for each SERVOPACK. The set includes the module cover, PCB mounting plate, and two mounting screws.

Note:

1. Refer to the following section for a table of the recommended linear encoders.
   ☞ *Recommended Linear Encoders on page 382*
2. Refer to the following section for the specifications of the serial converter unit.
   ☞ *Serial Converter Unit on page 418*
3. Refer to the chapter for your rotary servomotor for information on servomotor main circuit cables and encoder cables.
4. If you purchase a fully-closed module by itself, refer to the following manual for the method to mount it to the SERVOPACK.
   🕮 Σ-V-Series/Σ-V-Series for Large-Capacity Models/Σ-7-Series/Σ-X-Series Installation Guide Fully-Closed Module (Manual No.: TOBP C720829 03)

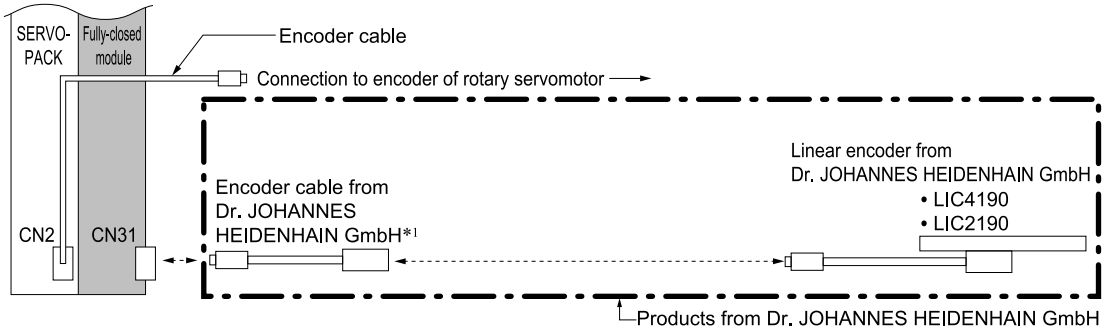
◆ Connections When Using a Yaskawa Serial Interface for the Output Signals

- LC115 or LC415 Linear Encoder with EIB3391Y Interface Unit



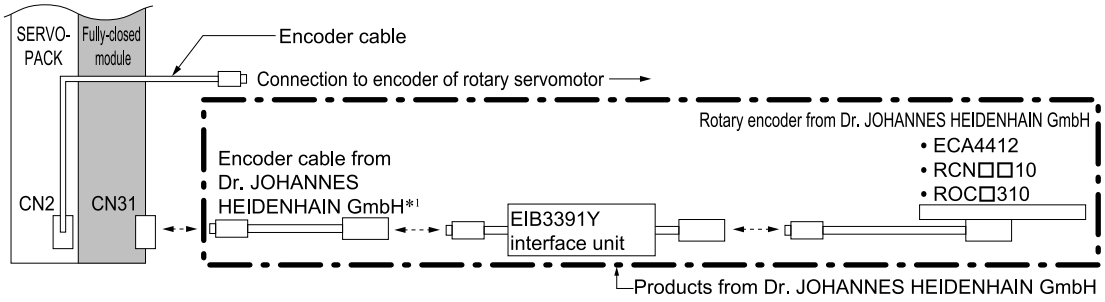
*1 Use an encoder cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed encoder cable specifications.

- LIC4190 or LIC2190 Linear Encoder



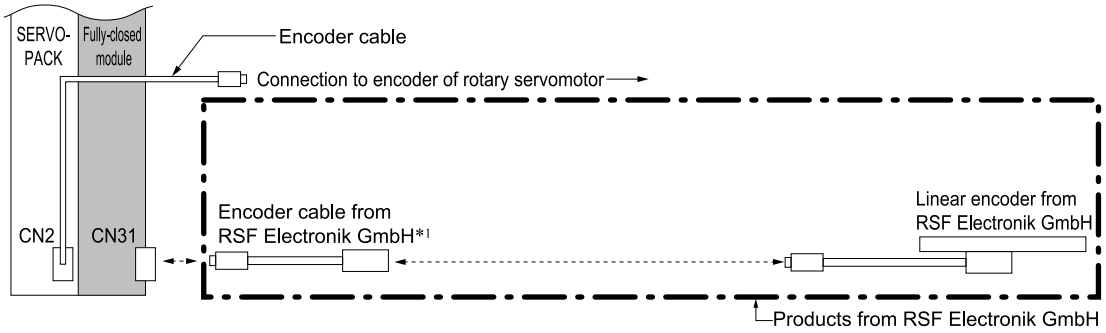
*1 Use an encoder cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed encoder cable specifications.

- ECA4412, RCN□□10, or ROC□310 Rotary Encoder with EIB3391Y Interface Unit



*1 Use an encoder cable from Dr. JOHANNES HEIDENHAIN GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed encoder cable specifications.

■ Connections to Linear Encoder from RSF Elektronik GmbH

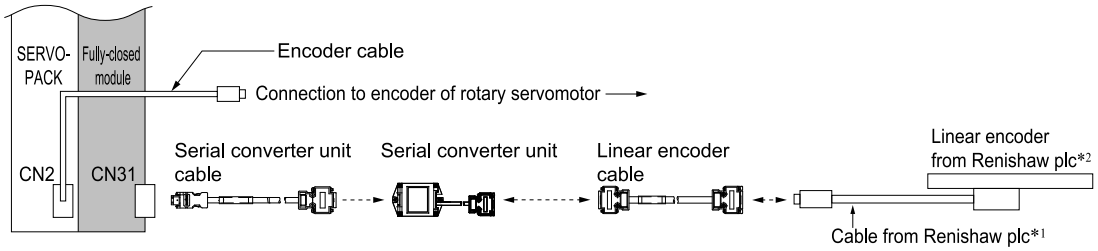


*1 Use an encoder cable from RSF Elektronik GmbH. Contact Dr. JOHANNES HEIDENHAIN GmbH for detailed encoder cable specifications.

■ Connections to Linear Encoder from Renishaw plc

◆ Connections for a 1 Vp-p Analog Voltage Output Signal

You must make the connections through a Yaskawa serial converter unit. The output signal will be multiplied by 8 bits (256 divisions) in the serial converter unit.



*1 Contact Renishaw plc for details on cables (analog 1 Vp-p output, D-sub 15-pin, male) from Renishaw plc. However, the BID and DIR signals are not connected.

*2 If you use the origin signals with a linear encoder from Renishaw plc, the origin may sometimes be falsely detected. If that occurs, use the BID/DIR signal to output the origin signal only in one direction.

Item	Model	Reference

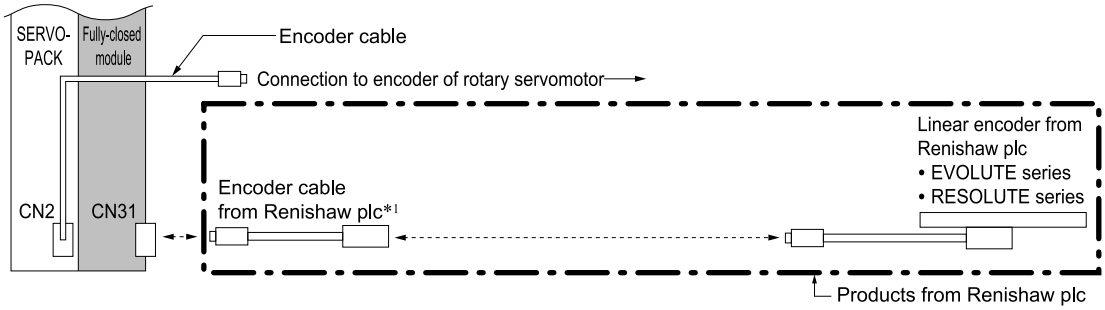
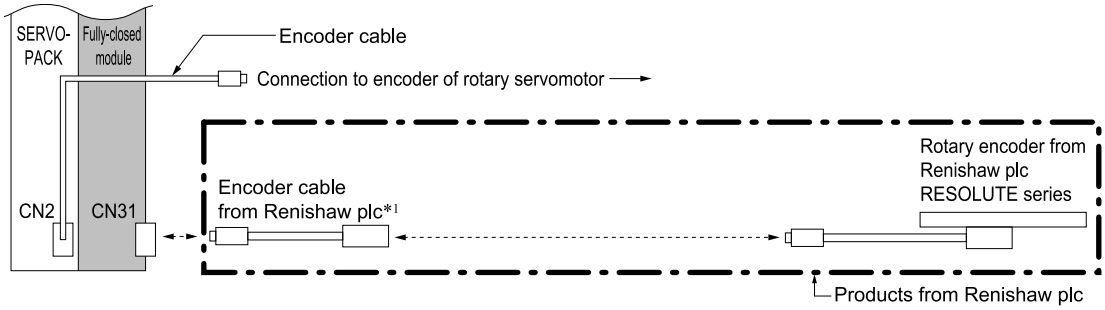
◆ Connections When Using a Yaskawa Serial Interface for the Output Signals

- EVOLUTE-Series or RESOLUTE-Series Linear Encoder



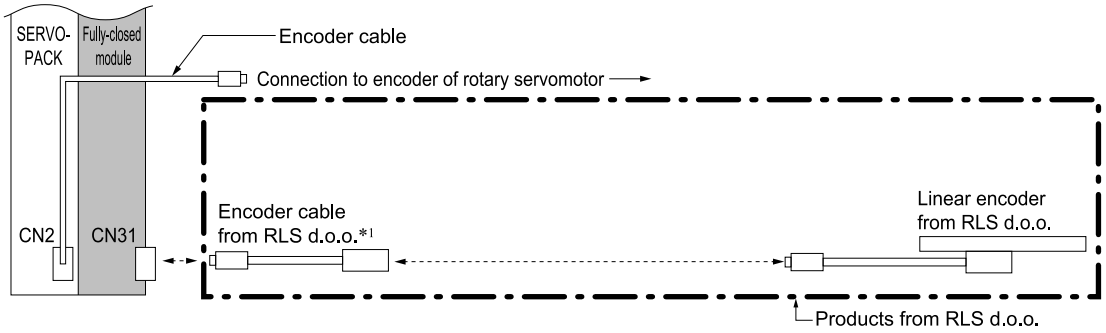
*1 Use an encoder cable from Renishaw plc. Contact Renishaw plc for detailed encoder cable specifications.

- RESOLUTE-Series Rotary Encoder



*1 Use an encoder cable from Renishaw plc. Contact Renishaw plc for detailed encoder cable specifications.

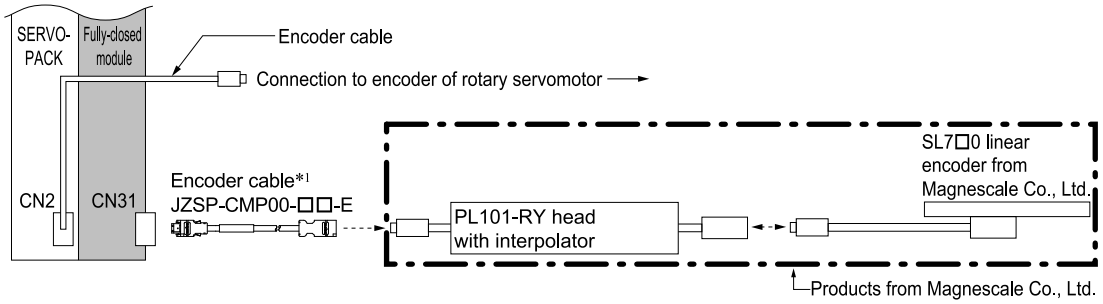
■ Connections to Linear Encoder from RLS d.o.o.



*1 Use an encoder cable from RLS d.o.o. Contact RLS d.o.o. or Renishaw plc for detailed encoder cable specifications.

■ Connections to Linear Encoder from Magnescale Co., Ltd.

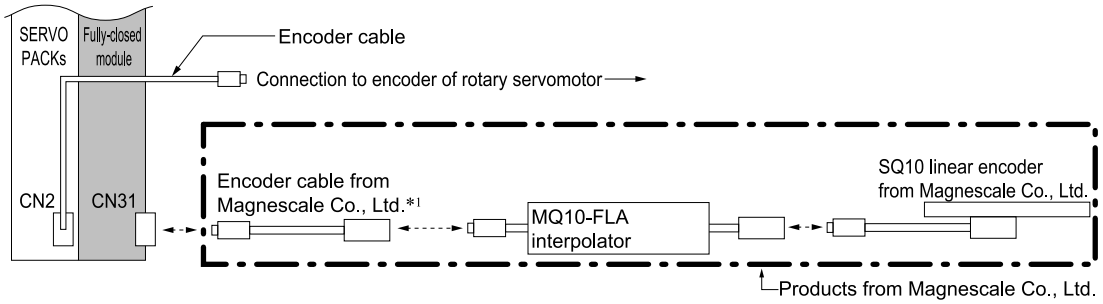
- SL7□0 Linear Encoder and PL101-RY Sensor Head with Interpolator



*1 Refer to the following section for details on encoder cables.

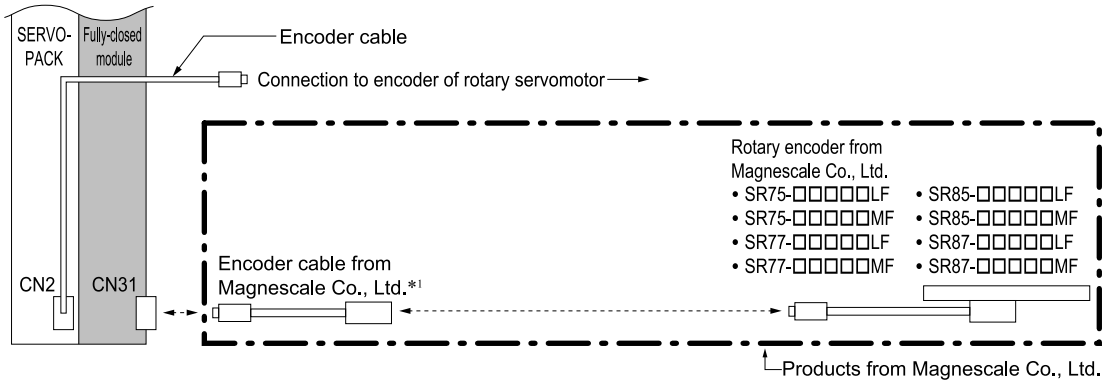
☞ *Encoder Cables on page 409*

- SmartSCALE Linear Encoder (SQ10 Scale and MQ10-FLA Interpolator)



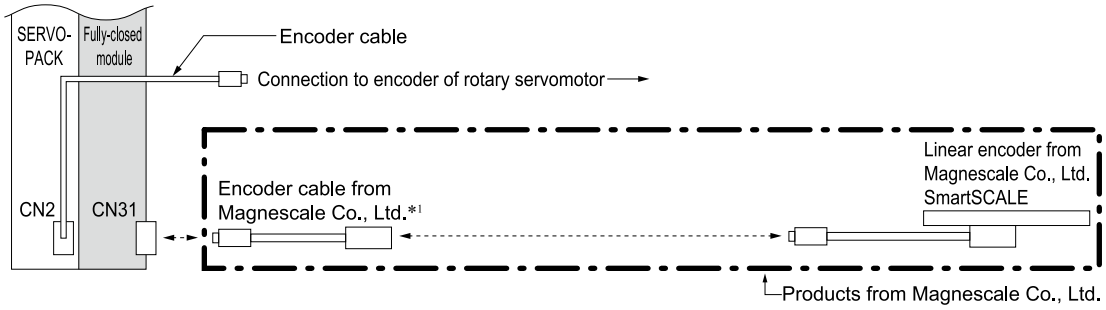
*1 Use an encoder cable from Magnescale Co., Ltd.. The maximum length of the encoder cable is 15 m. Contact Magnescale Co., Ltd. for specifications other than the cable length.

- SR-75, SR-77, SR-85, or SR-87 Linear Encoders



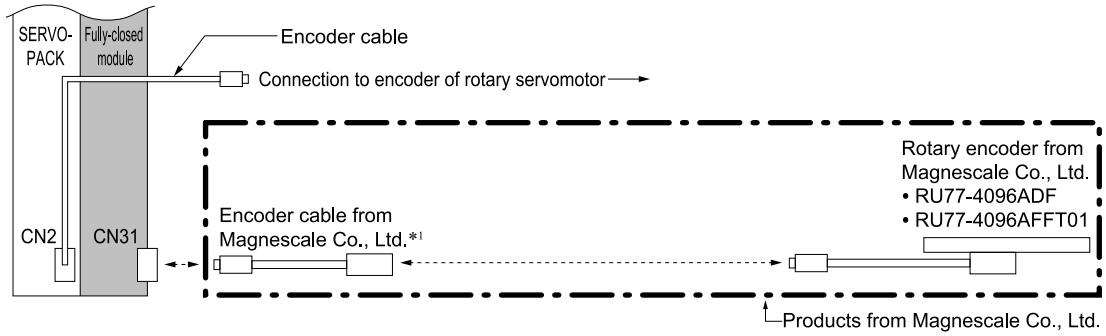
*1 Use a CH33-xx□□G cable from Magnescale Co., Ltd. (This cable has connectors designed for use with Yaskawa products.)

- SmartSCALE Linear Encoder (SQ47 or SQ57)



*1 Use an encoder cable from Magnescale Co., Ltd.. Contact Magnescale Co., Ltd. for details on encoder cable specifications.

- RU77-4096ADF or RU77-4096AFFT01 Absolute Rotary Encoders

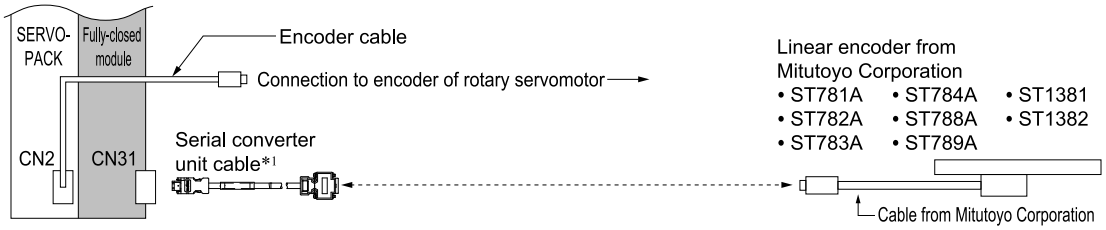


*1 Use a CE28-series extension cable for RU77 encoder from Magnescale Co., Ltd.

Note:

The RU77 is a single-turn absolute rotary encoder.

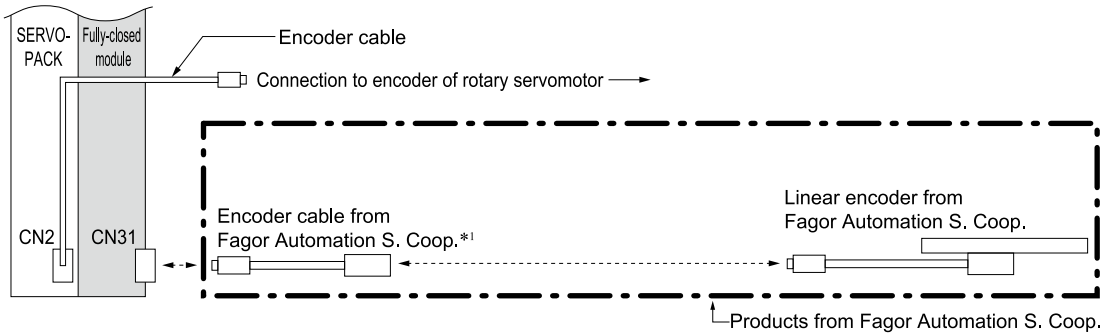
■ Connections to Linear Encoders from Mitutoyo Corporation



*1 Refer to the following section for details on serial converter unit cables.

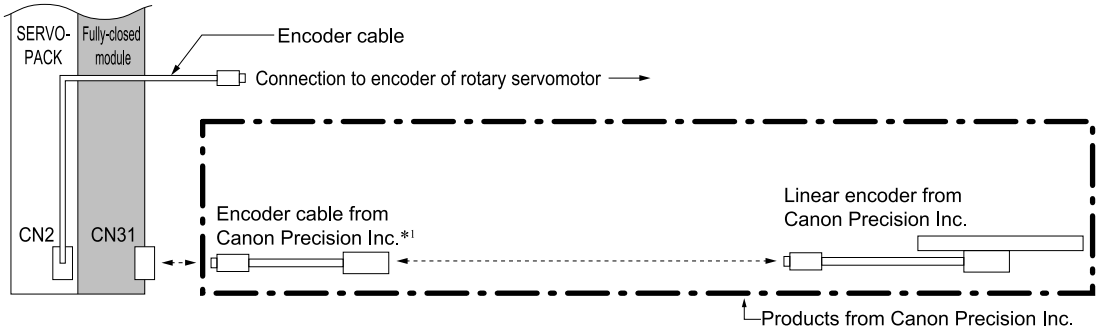
☞ *Serial Converter Unit Cables on page 407*

■ Connections to Linear Encoder from Fagor Automation S. Coop.



*1 Use encoder cables from Fagor Automation S. Coop. For detailed specifications of the encoder cables, consult Fagor Automation S. Coop. or its sales representative.

■ Connections to Linear Encoder from Canon Precision Inc.

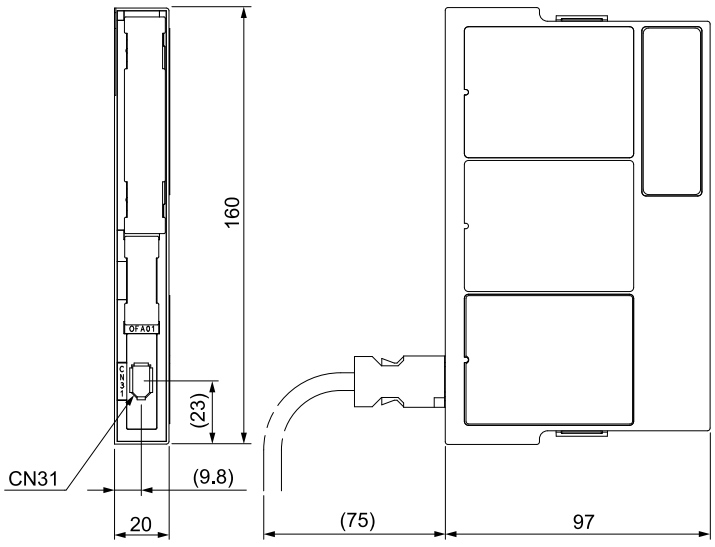


*1 Use encoder cables from Canon Precision Inc. Contact Canon Precision Inc. for detailed encoder cable specifications.

Accessories

If you purchase a fully-closed module by itself, the following accessories will be packed with it.

Order Number	SGDV-OFA01A
Accessories	
External Dimensions



Unit: mm
Approx. mass: 0.1 kg

■ Connectors

Device Label	Model	Number of Pins	Manufacturer
CN31	3E106-0220KV	6	3M Japan Limited

Note:

The above connectors or their equivalents are used for the SERVOPACKs.

Option Case Kit

If you purchase the option module and SERVOPACK separately, one option case kit is required for each SERVOPACK.
The following accessories are packed with the option case kit.

Order Number	SGDXS-OZA01A
Accessories	 PCB mounting plate Module cover

Additional Information

Capacity Selection for Servomotors

Selecting the Servomotor Capacity

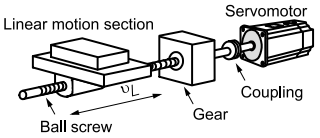
Use Yaskawa's SigmaSize+, an AC servo capacity selection program, to select the servomotor capacity. With the SigmaSize+, you can find the optimum servomotor capacity by simply selecting and entering information according to instructions from a wizard.

Contact your Yaskawa representative for information on this program.

Refer to the following selection examples to select servomotor capacities with manual calculations rather than with the above software.

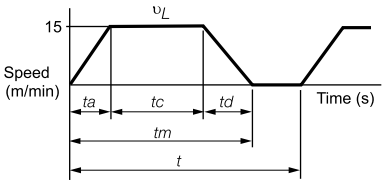
Capacity Selection Example for a Rotary Servomotor (Speed Control)

1. Machine Specifications



Item	Symbol	Value
Load Speed	υ_L	15 m/min
Linear Motion Section Mass	m	250 kg
Ball Screw Length	ℓ_B	1.0 m
Ball Screw Diameter	d_B	0.02 m
Ball Screw Lead	P_B	0.01 m
Ball Screw Material Density	ρ	7.87×10^3 kg/m^3
Gear Ratio	R	2 (gear ratio: 1/2)
External Force on Linear Motion Section	F	0 N
Gear and Coupling Moment of Inertia	J_G	0.40×10^{-4} kg·m^2
Number of Feeding Operations	n	40 rotations/min
Feeding Distance	ℓ	0.275 m
Feeding Time	tm	1.2 s max.
Friction Coefficient	μ	0.2
Mechanical Efficiency	η	0.9 (90%)

2. Operation Pattern



$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If $ta = td$,

$$ta = tm - \frac{60\ell}{\upsilon_L} = 1.2 - \frac{60 \times 0.275}{15} = 1.2 - 1.1 = 0.1 \text{ (s)}$$

$$tc = 1.2 - 0.1 \times 2 = 1.0 \text{ (s)}$$

3. Rotation Speed

- Load Shaft Speed

$$n_L = \frac{\upsilon_L}{P_B} = \frac{15}{0.01} = 1500 \text{ (min}^{-1}\text{)}$$

- Motor Shaft Speed

$n_M = n_L \cdot R = 1500 \times 2 = 3000 \text{ (min}^{-1}\text{)}$

4. Load Torque

$$T_L = \frac{(9.8 \cdot \mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 250 + 0) \times 0.01}{2\pi \times 2 \times 0.9} = 0.43 \text{ (N·m)}$$

5. Load Moment of Inertia

- Linear Motion Section

$$J_{L1} = m\left(\frac{P_B}{2\pi R}\right)^2 = 250 \times \left(\frac{0.01}{2\pi \times 2}\right)^2 = 1.58 \times 10^{-4} \text{ (kg·m}^2\text{)}$$

- Ball Screw

$$J_B = \frac{\pi}{32}\rho \cdot \ell_B \cdot d_B^4 \cdot \frac{1}{R^2} = \frac{\pi}{32} \times 7.87 \times 10^3 \times 1.0 \times (0.02)^4 \cdot \frac{1}{2^2} = 0.31 \times 10^{-4} \text{ (kg·m}^2\text{)}$$

- Coupling

$J_G = 0.40 \times 10^{-4}$(kg·m^2)

- Load Moment of Inertia at Motor Shaft
  $J_L = J_{L1} + J_B + J_G = (1.58 + 0.31 + 0.40) \times 10^{-4} = 2.29 \times 10^{-4} (kg \cdot m^2)$

6. Load Moving Power

$$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3000 \times 0.43}{60} = 135 \text{ (W)}$$

7. Load Acceleration Power

$$Pa = \left(\frac{2\pi}{60} n_M \right)^2 \frac{J_L}{ta} = \left(\frac{2\pi}{60} \times 3000 \right)^2 \times \frac{2.29 \times 10^{-4}}{0.1} = 226 \text{ (W)}$$

8. Servomotor Provisional Selection

   a. Selection Conditions

   - $T_L \leq$ Motor rated torque
   - $\frac{(Po + Pa)}{2} <$ Provisionally selected servomotor rated output $< (Po + Pa)$
   - $n_M \leq$ Motor rated speed
   - $J_L \leq$ Allowable load moment of inertia

   The following servomotor meets the selection conditions.

   - SGMXJ-02A servomotor

   b. Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	200 (W)
Rated Rotation Speed	3000 (min^{-1})
Rated Torque	0.637 (N·m)
Instantaneous Maximum Torque	2.23 (N·m)
Rotor Moment of Inertia	0.263×10^{-4} ($kg \cdot m^2$)
Allowable Load Moment of Inertia	$0.263 \times 10^{-4} \times 15 = 3.94 \times 10^{-4}$ ($kg \cdot m^2$)

9. Verification of the Provisionally Selected Servomotor

- Verification of Required Acceleration Torque

$$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} + 0.43$$

$$\approx 1.23 \text{ (N·m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of Required Deceleration Torque

$$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3000 \times (0.263 + 2.29) \times 10^{-4}}{60 \times 0.1} - 0.43$$

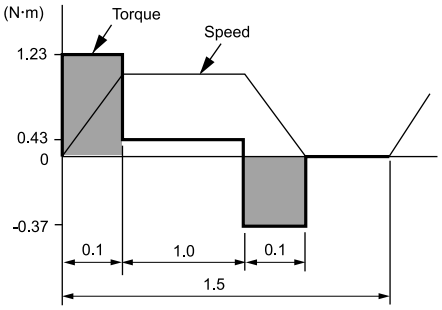
$$\approx 0.37 \text{ (N·m)} < \text{Maximum instantaneous torque...Satisfactory}$$

- Verification of Effective Torque Value

$$Trms = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + Ts^2 \cdot td}{t}} = \sqrt{\frac{(1.23)^2 \times 0.1 + (0.43)^2 \times 1.0 + (0.37)^2 \times 0.1}{1.5}}$$

$$\approx 0.483 \text{ (N·m)} < \text{Rated torque...Satisfactory}$$

10. Selection Result
    It has been verified that the provisionally selected servomotor is applicable.
    The torque diagram is shown below.



(N·m)

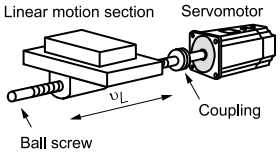
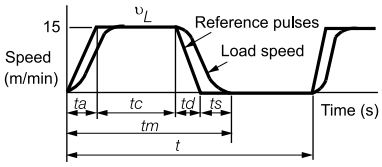
Capacity Selection Example for a Rotary Servomotor (Position Control)

1. Machine Specifications



Item	Symbol	Value
Load Speed	υ_L	15 m/min
Linear Motion Section Mass	m	80 kg
Ball Screw Length	ℓ_B	0.8 m
Ball Screw Diameter	d_B	0.016 m
Ball Screw Lead	P_B	0.005 m
Ball Screw Material Density	ρ	7.87×10^3 kg/m^3
External Force on Linear Motion Section	F	0 N
Coupling Mass	m_C	0.3 kg
Coupling Outer Diameter	d_C	0.03 m
Number of Feeding Operations	n	40 rotations/min
Feeding Distance	ℓ	0.25 m
Feeding Time	tm	1.2 s max.
Electrical Stopping Precision	δ	±0.01 mm
Friction Coefficient	μ	0.2
Mechanical Efficiency	η	0.9 (90%)

2. Speed Diagram



$$t = \frac{60}{n} = \frac{60}{40} = 1.5 \text{ (s)}$$

If $ta = td$, $ts = 0.1$ (s)

$$ta = tm - ts - \frac{60\ell}{\upsilon_L} = 1.2 - 0.1 - \frac{60 \times 0.25}{15} = 0.1 \text{ (s)}$$

$$tc = 1.2 - 0.1 - 0.1 \times 2 = 0.9 \text{ (s)}$$

3. Rotation Speed

- Load Shaft Speed

$$n_L = \frac{\upsilon_L}{P_B} = \frac{15}{0.005} = 3000 \text{ (min}^{-1}\text{)}$$

- Motor Shaft Speed
  Direct coupling gear ratio 1/R = 1/1
  Therefore, $n_M = n_L \cdot R = 3000 \times 1 = 3000$ (min^{-1})

4. Load Torque

$$T_L = \frac{(9.8\,\mu \cdot m + F) \cdot P_B}{2\pi R \cdot \eta} = \frac{(9.8 \times 0.2 \times 80 + 0) \times 0.005}{2\pi \times 1 \times 0.9} = 0.139 \text{ (N·m)}$$

5. Load Moment of Inertia
   - Linear Motion Section

     $$J_{L1} = m\left(\frac{P_B}{2\pi R}\right)^2 = 80 \times \left(\frac{0.005}{2\pi \times 1}\right)^2 = 0.507 \times 10^{-4}\ (\text{kg·m}^2)$$

   - Ball Screw

     $$J_B = \frac{\pi}{32}\rho \cdot \ell_B \cdot d_B{}^4 = \frac{\pi}{32} \times 7.87 \times 10^3 \times 0.8 \times (0.016)^4 = 0.405 \times 10^{-4}\ (\text{kg·m}^2)$$

   - Coupling

     $$Jc = \frac{1}{8} m_C \cdot d_C{}^2 = \frac{1}{8} \times 0.3 \times (0.03)^2 = 0.338 \times 10^{-4}\ (\text{kg·m}^2)$$

   - Load Moment of Inertia at Motor Shaft
     $J_L = J_{L1} + J_B + J_C = 1.25 \times 10^{-4}\ (\text{kg·m}^2)$
6. Load Moving Power

   $$P_O = \frac{2\pi n_M \cdot T_L}{60} = \frac{2\pi \times 3000 \times 0.139}{60} = 43.7\ (\text{W})$$

7. Load Acceleration Power

   $$Pa = \left(\frac{2\pi}{60} n_M\right)^2 \frac{J_L}{ta} = \left(\frac{2\pi}{60} \times 3000\right)^2 \times \frac{1.25 \times 10^{-4}}{0.1} = 123.4\ (\text{W})$$

8. Servomotor Provisional Selection
   a. Selection Conditions
      - $T_L \leq$ Motor rated torque
      - $\frac{(Po + Pa)}{2}$ < Provisionally selected servomotor rated output < $(Po + Pa)$
      - $n_M \leq$ Motor rated speed
      - $J_L \leq$ Allowable load moment of inertia

      The following servomotor meets the selection conditions.
      - SGMXJ-01A servomotor

   b. Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Output	100 (W)
Rated Rotation Speed	3000 (min^{-1})
Rated Torque	0.318 (N·m)
Instantaneous Maximum Torque	1.11 (N·m)
Rotor Moment of Inertia	0.0669×10^{-4} (kg·m^2)
Allowable Load Moment of Inertia	$0.0659 \times 10^{-4} \times 35 = 2.31 \times 10^{-4}$ (kg·m^2)
Encoder Resolution	67108864 (pulses/rev) (26 bits)

9. Verification of the Provisionally Selected Servomotor
   - Verification of Required Acceleration Torque

     $$T_P = \frac{2\pi n_M (J_M + J_L)}{60ta} + T_L = \frac{2\pi \times 3000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} + 0.139$$

     $\approx$ 0.552 (N·m) < Maximum instantaneous torque...Satisfactory
   - Verification of Required Deceleration Torque

     $$T_S = \frac{2\pi n_M (J_M + J_L)}{60td} - T_L = \frac{2\pi \times 3000 \times (0.0659 + 1.25) \times 10^{-4}}{60 \times 0.1} - 0.139$$

     $\approx$ 0.274 (N·m) < Maximum instantaneous torque...Satisfactory

- Verification of Effective Torque Value

$$Trms = \sqrt{\frac{T_P^2 \cdot ta + T_L^2 \cdot tc + Ts^2 \cdot td}{t}} = \sqrt{\frac{(0.552)^2 \times 0.1 + (0.139)^2 \times 0.9 + (0.274)^2 \times 0.1}{1.5}}$$

$$\approx 0.192 \text{ (N·m)} < \text{Rated torque...Satisfactory}$$

It has been verified that the provisionally selected servomotor is applicable in terms of capacity. Position control is considered next.

10. Positioning Resolution
The electrical stopping precision $\delta = \pm 0.01$ mm, so the positioning resolution $\Delta\ell = 0.01$ mm.
The ball screw lead $P_B = 0.005$ m, so the number of pulses per motor rotation is calculated using the following formula.

$$\text{Number of pulses per rotation (pulses)} = \frac{P_B}{\Delta\ell} = \frac{5 \text{ mm/rev}}{0.01 \text{ mm}} = 500 \text{ (P/rev)} < \text{Encoder resolution〔67108864 (P/rev)〕}$$

The number of pulses per motor rotation is less than the encoder resolution (pulses/rev), so the provisionally selected servomotor can be used.

11. Reference Pulse Frequency
The load speed $\upsilon_L = 15$ m/min = 1000 × 15/60 mm/s and the positioning resolution (travel distance per pulse) = 0.01 mm/pulse, so the reference pulse frequency is calculated with the following formula.

$$vs = \frac{1000\ \upsilon_L}{60 \times \Delta\ell} = \frac{1000 \times 15}{60 \times 0.01} = 25{,}000 \text{ (pps)}$$

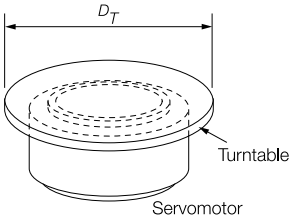
The reference pulse frequency is less than the maximum input pulse frequency *1, so the provisionally selected servomotor can be used.

*1 Refer to the specifications in the SERVOPACK manual for the maximum input pulse frequency.

It has been verified that the provisionally selected servomotor is applicable for position control.

Capacity Selection Example for Direct Drive Servomotors

1. Machine Specifications

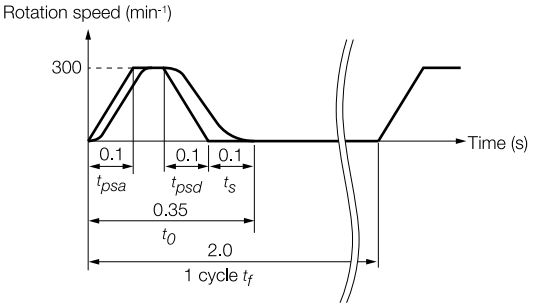


Item	Code	Value		Item	Code	Value
Turntable Mass	W	12 kg		Acceleration/Deceleration Time	t_p = t_{psa} = t_{psd}	0.1 s
Turntable Diameter	D_T	300 mm		Operating Frequency	t_f	2 s
Rotational Angle per Cycle	θ	270 deg		Load Torque	T_L	0 N· m
Positioning Time	t_0	0.35 s		Settling Time	t_s	0.1 s

2. Motor Speed of Direct Drive Servomotor

$$N_O = \frac{\theta}{360} \times \frac{60}{(t_0 - t_p - t_s)} = \frac{270}{360} \times \frac{60}{(0.35 - 0.1 - 0.1)} = 300\ (\text{min}^{-1})$$

3. Operation Pattern



4. Load Moment of Inertia

$$J_L = \frac{1}{8} \times D_T^2 \times W = \frac{1}{8} \times (300 \times 10^{-3})^2 \times 12 = 0.135\ (\text{kg·m}^2)$$

5. Load Acceleration/Deceleration Torque

$$T_a = J_L \times 2\pi \times \frac{N_O/60}{t_p} = 0.135 \times 2\pi \times \frac{300/60}{0.1} = 42.4\ (\text{N·m})$$

6. Provisional Selection of Direct Drive Servomotor

① Selection Conditions

- Load acceleration/deceleration torque < Instantaneous maximum torque of direct drive servomotor
- Load moment of inertia < Allowable load moment of inertia ratio (J_R) × Moment of inertia of direct drive servomotor (J_M)

The following servomotor meets the selection conditions.

- SGMCV-17CEA11

② Specifications of the Provisionally Selected Servomotor

Item	Value
Rated Torque	17 (N· m)
Instantaneous Maximum Torque	51 (N· m)

Continued on next page.

Continued from previous page.

Item	Value
Moment of Inertia (J_M)	0.00785 (kg· m^2)
Allowable Load Moment of Inertia Ratio (J_R)	25

7. Verification of the Provisionally Selected Servomotor

- Verification of Required Acceleration Torque

$$T_{Ma} = \frac{(J_L + J_M) \times N_O}{9.55 \times t_{psa}} = \frac{(0.135 + 0.00785) \times 300}{9.55 \times 0.1}$$

$\fallingdotseq$ 44.9 (N·m)<Maximum instantaneous torque···Satisfactory

- Verification of Required Deceleration Torque

$$T_{Md} = -\frac{(J_L + J_M) \times N_O}{9.55 \times t_{psd}} = -\frac{(0.135 + 0.00785) \times 300}{9.55 \times 0.1}$$

$\fallingdotseq$ – 44.9 (N·m)<Maximum instantaneous torque···Satisfactory

- Verification of Effective Torque Value

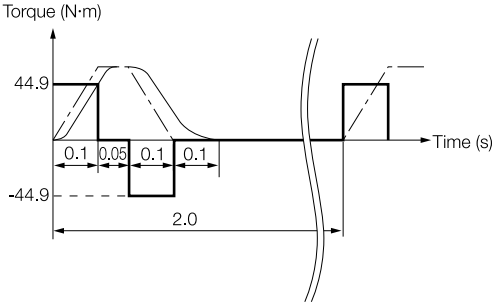
$$Trms = \sqrt{\frac{T_{Ma}^2 \times t_{psa} + T_L^2 \times t_c + T_{Md}^2 \times t_{psd}}{tf}} = \sqrt{\frac{44.9^2 \times 0.1 + 0^2 \times 0.05 + (-44.9)^2 \times 0.1}{2}}$$

$\fallingdotseq$ 14.2 (N·m) <Rated torque···Satisfactory

t_c= Time of constant rotation speed = $t_0 - t_s - t_{psa} - t_{psd}$

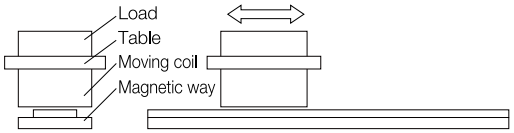
8. Result

It has been verified that the provisionally selected servomotor is applicable. The torque diagram is shown below.



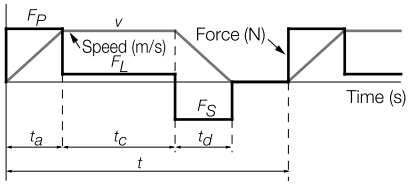
Capacity Selection Example for Linear Servomotors

1. Machine Specifications



Item	Code	Value		Item	Code	Value
Load Mass	m_W	1 kg		Acceleration Time	t_a	0.02 s
Table Mass	m_T	2 kg		Constant-speed Time	t_c	0.36 s
Motor Speed	v	2 m/s		Deceleration Time	t_d	0.02 s
Feeding Distance	l	0.76 m		Cycle Time	t	0.5 s
Friction Coefficient	μ	0.2		External Force on Linear Motion Section	F	0 N

2. Operation Pattern



3. Steady-State Force (Excluding Servomotor Moving Coil)

$F_L = \{9.8 \times \mu \times (m_W + m_T)\} + F = 9.8 \times 0.2 \times (1 + 2) + 0 = 5.88$ (N)

4. Acceleration Force (Excluding Servomotor Moving Coil)

$$F_P = (m_W + m_T) \times \frac{v}{t_a} + F_L = (1 + 2) \times \frac{2}{0.02} + 5.88 = 305.88 \text{ (N)}$$

5. Provisional Selection of Linear Servomotor

① Selection Conditions

- $F_p \leq$ Maximum force × 0.9
- $F_s \leq$ Maximum force × 0.9
- $F_{rms} \leq$ Rated force × 0.9

The following servomotor moving coil and magnetic way meet the selection conditions.

- SGLGW-60A253CP linear servomotor moving coil
- SGLGM-60□□□C linear servomotor magnetic way

② Specifications of the Provisionally Selected Servomotor

Item	Value
Maximum Force	440 (N)
Rated Force	140 (N)
Moving Coil Mass (m_M)	0.82 (kg)
Servomotor Magnetic Attraction (F_{att})	0 (N)

6. Verification of the Provisionally Selected Servomotor

- Steady-State Force
  $F_L = \mu \{9.8 \times (m_W + m_T + m_M) + F_{att}\} = 0.2 \{9.8 \times (1 + 2 + 0.82) + 0\} = 7.5$ (N)
- Verification of Acceleration Force

$$F_P = (m_W + m_T + m_M) \times \frac{v}{t_a} + F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} + 7.5$$

$= 389.5$ (N)≦Maximum force × 0.9 (= 396 N)···Satisfactory

- Verification of Deceleration Force

$$F_S = (m_W + m_T + m_M) \times \frac{v}{t_a} - F_L = (1 + 2 + 0.82) \times \frac{2}{0.02} - 7.5$$

$= 374.5$ (N)≦Maximum force × 0.9 (= 396 N)···Satisfactory

- Verification of Effective Force

$$F_{rms} = \sqrt{\frac{F_P^2 \cdot t_a + F_L^2 \cdot t_c + F_s^2 \cdot t_d}{t}} = \sqrt{\frac{389.5^2 \times 0.02 + 7.5^2 \times 0.36 + 374.5^2 \times 0.02}{0.5}}$$

$= 108.3$ (N) ≦Rated force × 0.9 (= 132.3 N)···Satisfactory

7. Result

It has been verified that the provisionally selected servomotor is applicable.

Capacity Selection for Regenerative Resistors

Regenerative Power and Regenerative Resistance

The rotational energy of a driven machine such as a servomotor that is returned to the SERVOPACK is called regenerative power. The regenerative power is absorbed by charging a smoothing capacitor. When the regenerative power exceeds the capacity of the capacitor, it is consumed by a regenerative resistor. (This is called resistance regeneration.)

The servomotor is driven in a regeneration state in the following circumstances:

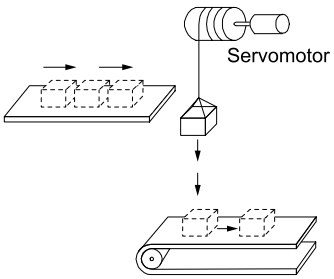
- While decelerating to a stop during acceleration/deceleration operation.
- While performing continuous downward operation on a vertical axis.
- During continuous operation in which the servomotor is rotated by the load (i.e., a negative load).

Important

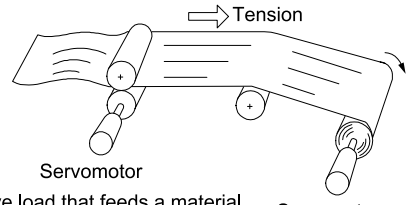
You cannot use the resistance regeneration provided by the SERVOPACK for continuous regeneration. For continuous operation with a negative load, you must design a system that also includes a power regenerative converter or power regenerative unit. If regenerative power is not appropriately processed, the regenerative energy from the load will exceed the allowable range and damage the SERVOPACK.

Examples of negative loads are shown below.

• Motor Drive to Lower Objects without a Counterweight



• Motor Drive for Feeding



Negative load that feeds a material at a constant speed under tension

Types of Regenerative Resistors

The following regenerative resistors can be used.

- Built-in regenerative resistor: A regenerative resistor that is built into the SERVOPACK. Not all SERVOPACKs have built in regenerative resistors.
- External regenerative resistor: A regenerative resistor that is connected externally to SERVOPACK. These resistors are used when the smoothing capacitor and built-in regenerative resistor in the SERVOPACK cannot consume all of the regenerative power.
  These resistors are also used when Yaskawa's SigmaSize+, an AC servo capacity selection program, determines an external regenerative resistor is necessary.

Note:

• Contact your Yaskawa representative for information on SigmaSize+.

• If you use an external regenerative resistor, you must change the setting of Pn600 (regenerative resistor capacity) and Pn603 (regenerative resistance).

Selection Table

SERVOPACK Model			Built-in Regenerative Resistor	External Regenerative Resistor	Description
SGDXS-	SGDXW-	SGDXT-			
R70A, R90A, 1R6A, 2R8A	–	–	Not provided.	Basically not required.	There is no built-in regenerative resistor, but normally an external regenerative resistor is not required. Install an external regenerative resistor when the smoothing capacitor in the SERVOPACK cannot consume all the regenerative power. *1
3R8A, 5R5A, 7R6A, 120A, 180A, 200A, 330A	1R6A, 2R8A, 5R5A, 7R6A	1R6A, 2R8A	Standard feature *2	Basically not required.	A built-in regenerative resistor is provided as a standard feature. Install an external regenerative resistor when the built-in regenerative resistor cannot process all of the regenerative power. *1
470A, 550A, 590A, 780A	-	–	Not provided.	Required. *3	There is no built-in regenerative resistor. An external regenerative resistor is required. If an external regenerative resistor is not connected, Regeneration Error [A.300] will be displayed.

*1 Use Yaskawa's SigmaSize+, an AC servo capacity selection program, to select an external regenerative resistor.
Contact your Yaskawa representative for information on SigmaSize+.

*2 Refer to the following section for the specifications of built-in regenerative resistors.
☞ *Specifications of Built-in Regenerative Resistors in SERVOPACKs on page 573*

*3 Regenerative resistor units are available from Yaskawa. For details, refer to the following section.
☞ *Regenerative Resistor Unit on page 577*

Selecting External Regenerative Resistor

You can use one of two methods to manually calculate whether an external regenerative resistor is required.

☞ *Calculating With Yaskawa's Support Tool SigmaSize+: AC Servo Capacity Selection Program on page 657*

☞ *Simple Calculation on page 657*

☞ *Calculating the Regenerative Energy on page 665*

Calculating With Yaskawa's Support Tool SigmaSize+: AC Servo Capacity Selection Program

Using Yaskawa's support tool SigmaSize+, an AC servo capacity selection program, will allow you to use a wizard to calculate and select if external regenerative resistors are required or not.

Contact your Yaskawa representative for information on SigmaSize+.

Simple Calculation

When driving a servomotor with a horizontal shaft, check if an external regenerative resistor is required using the following calculation method. The calculation method depends on the model of the SERVOPACK.

■ SERVOPACK Models: SGDXS-R70A, -R90A, -1R6A, -2R8A,

Regenerative resistors are not built into the above SERVOPACKs. The total amount of energy that can be charged in the capacitors is given in the following table.

If the rotational energy (E_S) of the servomotor and load exceeds the processable regenerative energy, then connect an external regenerative resistor.

Applicable SERVOPACK		Processable Regenerative Energy (Joules)	Remarks
SGDXS-	R70A, R90A, 1R6A	24.2	Value when main circuit input voltage is 200 VAC
	2R8A	32.6	

Calculate the rotational energy (E_S) of the servo system with the following equation:

$E_S = J \times (n_M)^2/182$ (Joules)

- $J = J_M + J_L$
- J_M: Servomotor moment of inertia (kg·m^2)
- J_L: Load moment of inertia at motor shaft (kg·m^2)
- n_M: Servomotor operating motor speed (min^{-1})

■ SERVOPACK Models: SGDXS-3R8A, -5R5A, -7R6A, -120A, -180A, -200A, -330A, -470A, -550A, -590A, -780A, SGDXW-1R6A, -2R8A, -5R5A, -7R6A, SGDXT-1R6A, -2R8A

For the above SERVOPACK models, an external regenerative resistor may be required depending on the allowable frequency for regenerative operation. (For SGDXS-470A, -550A, -590A, -780A, it is assumed that a regenerative resistor unit is connected.)

Use the following equation to calculate the allowable frequency for regenerative operation.

$$\text{Allowable frequency} = \frac{\text{Allowable frequency for regenerative operation for servomotor without load}}{(1+n)} \times \left(\frac{\text{Maximum motor speed}}{\text{Operating motor speed}}\right)^2 \text{(time/min)}$$

- $n = J_L/J_M$
- J_M: Servomotor moment of inertia (kg·m^2)
- J_L: Load moment of inertia at motor shaft (kg·m^2)

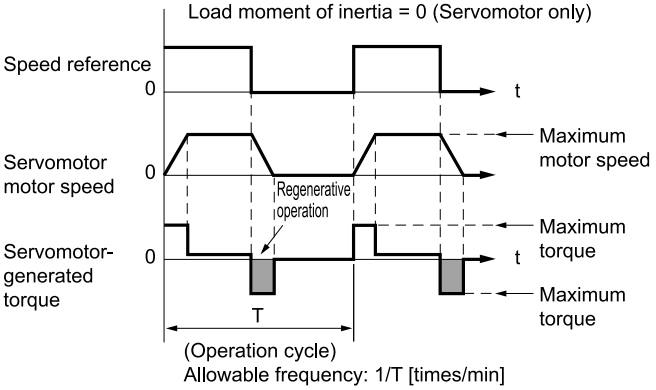
The allowable frequency for regenerative operation for a servomotor without load is explained below.

The operating conditions are acceleration and deceleration in an operation cycle with motor speed: 0 → specified motor speed → 0 (min^{-1}) as shown in the graph.

If the frequency (1/T) of the operation cycle is greater than the allowable frequency of the calculated result, an external regenerative resistor is required.

Finally, convert the data into the values for the actual motor speed and load moment of inertia to determine whether an external regenerative resistor is required.

If the specified motor speed is not designated, calculate by using the specified motor speed = maximum motor speed.



Operating Conditions for Calculating the Allowable Regenerative Frequency

Information **Allowable frequency for regenerative operation by a single servomotor without a load (described later)**

For SGDXS-470A, -550A, -590A, -780A, the values listed are with the optional regenerative resistor unit connected. Refer to the following sections for details on regenerative resistor unit.

☞ *Regenerative Resistor Unit on page 577*

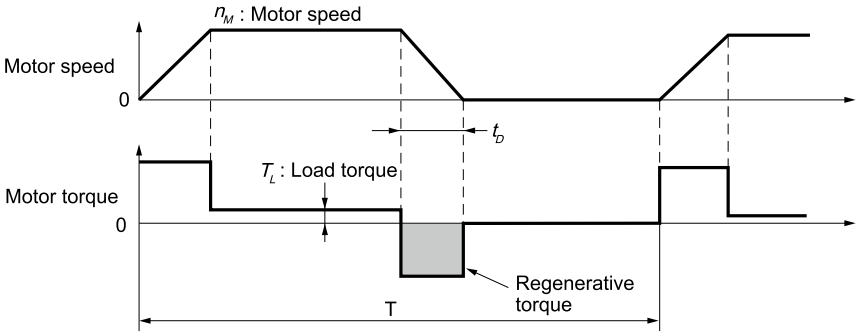
Calculating the Regenerative Energy

This section shows how to calculate the regenerative resistor capacity for the acceleration/deceleration operation shown in the following figure.



- Calculation Procedure for Regenerative Resistor Capacity

Step	Item	Symbol	Formula
1	Calculate the rotational energy of the servomotor.	E_S	$E_S = Jn_M^2/182$
2	Calculate the energy consumed by load loss during the deceleration period	E_L	$E_L = (\pi/60)\, n_M T_L t_D$
3	Calculate the energy lost from servomotor winding resistance.	E_M	(Value calculated from the graphs in *Servomotor Winding Resistance Loss on page 668*) × t_D
4	Calculate the energy that can be absorbed by the SERVOPACK.	E_C	Calculate from the graphs in *SERVOPACK-absorbable Energy on page 666*
5	Calculate the energy consumed by the regenerative resistor.	E_K	$E_K = E_S - (E_L + E_M + E_C)$
6	Calculate the required regenerative resistor capacity (W).	W_K	$W_K = E_K/(0.2 \times T)$

Note:

1. The 0.2 in the equation for calculating W_K is the value when the regenerative resistor's utilized load ratio is 20%.
2. The units for the various symbols are given in the following table.

Symbol	Description
E_S to E_K	Energy in joules (J)
W_K	Required regenerative resistor capacity (W)
J	= J_M + J_L (kg·m^2)
n_M	Servomotor motor speed (min^{-1})
T_L	Load torque (N·m)
t_D	Deceleration stopping time (s)
T	Servomotor repeat operation cycle (s)

If the value of W_K does not exceed the capacity of the built-in regenerative resistor of the SERVOPACK, an external regenerative resistor is not required. For details on the built-in regenerative resisters, refer to the SERVOPACK specifications. If the value of W_K exceeds the capacity of the built-in regenerative resistor, install an external regenerative resistor with a capacity equal to the value for W calculated above.

■ SERVOPACK-absorbable Energy

The following figures show the relationship between the SERVOPACK's input power supply voltage and its absorbable energy.

*1 Only small-capacity servomotors with cores (SGM7F-□□A, -□□B, -□□C, -□□D) are in compliance with the UL standards. Medium-capacity servomotors with cores (SGM7F-□□M, -□□N) do not comply with the UL standards.
*2 The model numbers of the magnetic ways of linear servomotors are given in parentheses.
*3 Only products with derating specifications are in compliance with the standards. Estimates are available for those models. Contact your Yaskawa representative for details.
*4 CE marking certification has been received. Contact your Yaskawa representative if the CE marking label is required.
*5 Estimates are provided for RoHS-compliant products. The model numbers have an "-E" suffix.
*6 Certification has not yet been received for SGLTW-35A□□□H, -50A□□□H linear servomotors.

Warranty

Details of Warranty

Warranty Period

The warranty period for a product that was purchased (hereinafter called the “delivered product”) is one year from the time of delivery to the location specified by the customer or 18 months from the time of shipment from the Yaskawa factory, whichever is sooner.

Warranty Scope

Yaskawa shall replace or repair a defective product free of charge if a defect attributable to Yaskawa occurs during the above warranty period. This warranty does not cover defects caused by the delivered product reaching the end of its service life and replacement of parts that require replacement or that have a limited service life.

This warranty does not cover failures that result from any of the following causes.

- Improper handling, abuse, or use in unsuitable conditions or in environments not described in product catalogs or manuals, or in any separately agreed-upon specifications
- Causes not attributable to the delivered product itself
- Modifications or repairs not performed by Yaskawa
- Use of the delivered product in a manner in which it was not originally intended
- Causes that were not foreseeable with the scientific and technological understanding at the time of shipment from Yaskawa
- Events for which Yaskawa is not responsible, such as natural or human-made disasters

Limitations of Liability

- Yaskawa shall in no event be responsible for any damage or loss of opportunity to the customer that arises due to failure of the delivered product.
- Yaskawa shall not be responsible for any programs (including parameter settings) or the results of program execution of the programs provided by the user or by a third party for use with programmable Yaskawa products.
- The information described in product catalogs or manuals is provided for the purpose of the customer purchasing the appropriate product for the intended application. The use thereof does not guarantee that there are no infringements of intellectual property rights or other proprietary rights of Yaskawa or third parties, nor does it construe a license.
- Yaskawa shall not be responsible for any damage arising from infringements of intellectual property rights or other proprietary rights of third parties as a result of using the information described in catalogs or manuals.

Suitability for Use

- It is the customer's responsibility to confirm conformity with any standards, codes, or regulations that apply if the Yaskawa product is used in combination with any other products.
- The customer must confirm that the Yaskawa product is suitable for the systems, machines, and equipment used by the customer.
- Consult with Yaskawa to determine whether use in the following applications is acceptable. If use in the application is acceptable, use the product with extra allowance in ratings and specifications, and provide safety measures to minimize hazards in the event of failure.
  - Outdoor use, use involving potential chemical contamination or electrical interference, or use in conditions or environments not described in product catalogs or manuals
  - Nuclear energy control systems, combustion systems, railroad systems, aviation systems, vehicle systems, medical equipment, amusement machines, and installations subject to separate industry or government regulations
  - Systems, machines, and equipment that may present a risk to life or property
  - Systems that require a high degree of reliability, such as systems that supply gas, water, or electricity, or systems that operate continuously 24 hours a day
  - Other systems that require a similar high degree of safety
- Never use the product for an application involving serious risk to life or property without first ensuring that the system is designed to secure the required level of safety with risk warnings and redundancy, and that the Yaskawa product is properly rated and installed.
- The circuit examples and other application examples described in product catalogs and manuals are for reference. Check the functionality and safety of the actual devices and equipment to be used before using the product.
- Read and understand all use prohibitions and precautions, and operate the Yaskawa product correctly to prevent accidental harm to third parties.

Specifications Change

The names, specifications, appearance, and accessories of products in product catalogs and manuals may be changed at any time based on improvements and other reasons. The next editions of the revised catalogs or manuals will be published with updated code numbers. Consult with your Yaskawa representative to confirm the actual specifications before purchasing a product.
